1. INTRODUCTION

1.1 Background

I.I.T. Delhi provides science-based engineering education with a view to produce quality engineer-scientists. The curriculum provides broad based knowledge and simultaneously builds a temper for the life long process of learning and exploring. At the undergraduate level, a student needs to do compulsory foundation courses in the areas of basic sciences, humanities, social sciences and engineering sciences apart from departmental requirements in the core engineering discipline. Departmental courses (core and electives) constitute about half of the total curriculum. Further, students do open category electives to develop broad inter-disciplinary knowledge base or to specialize significantly in an area outside the parent discipline. At the postgraduate level, students are encouraged to look beyond their area of specialization to broaden their horizons through open electives.

The medium of instruction in the Institute is English.

The Institute follows the semester system. An academic year runs from July through June next year and is essentially comprised of two semesters. Typically, the 1st semester starts in the last week of July and ends in the 1st week of December; the 2nd semester starts in the 1st week of January and ends in the 2nd week of May. Additionally, the summer semester which starts in the 3rd week of May and ends in the 2nd week of July, is utilized in some exceptional cases. Detailed schedule is given in the Semester Schedule that is made available before the start of each semester.

1.2 Departments, Centres and Schools

Each course is offered by an academic unit which could be a department, a centre or a school. The names of Departments, Centres and Schools and their two-letter codes are given in Table 1. Some programmes are offered jointly by multiple academic units and are classified as interdisciplinary programmes; their codes are given in Table 2.

Table 1. Academic Departments, Centres and Schools.

Name of Academic Unit (alphabetical order)	Code of Academic Unit	Course Prefix
Applied Mechanics, Department of	AM	AP
Applied Research in Electronics, Centre for	CR	CR
Atmospheric Sciences, Centre for	AS	AS
Biochemical Engineering and Biotechnology, Department of	BE	BB
Biological Sciences, Kusuma School of	BL	SB
Biomedical Engineering, Centre for	BM	BM
Chemical Engineering, Department of	CH	CL
Chemistry, Department of	CY	CM
Civil Engineering, Department of	CE	CV
Computer Science and Engineering, Department of	CS	CO
Electrical Engineering, Department of	EE	EL
Energy Studies, Centre for	ES	ES
Humanities and Social Sciences, Department of	HU	HU
Industrial Tribology, Machine Dynamics and Maintenance Engineering Centre	IT	IT
Information Technology, Amar Nath and Shashi Khosla, School of	AN/SI	SI
Instrument Design and Development Centre	ID	DS
Management Studies, Department of	SM	SM
Mathematics, Department of	MA	MT
Mechanical Engineering, Department of	ME	MC
Physics, Department of	PH	PY
Polymer Science and Technology, Centre for	PT	PT
Rural Development and Technology, Centre for	RD	RD
Telecommunication Technology and Management, Bharti School of	BS	BS
Textile Technology, Department of	TT	TX
Value Education in Engineering, National Resource Center for	VE	VE

Table 2. Interdisciplinary programmes

Name of Interdisciplinary programme (alphabetical order)	Code
Computer Applications	JCA
Energy Studies	JES
Energy and Environment Management	JEN
Industrial Tribology and Maintenance Engineering	JIT
Instrument Technology	JID
Optoelectronics and Optical Communication	JOP
Polymer Science and Technology	JPT
Power Generation Technology	JPG
Telecommunication Technology and Management	JTM
VLSI Design Tools and Technology	JVL

1.3 Programmes Offered

IIT Delhi offers a variety of academic programmes for students with a wide range of backgrounds. Admission to many of these programmes are based on performance in national level tests / entrance examinations. Details are given in the Prospectus.

The programmes offered by IIT Delhi are presently classified as undergraduate and postgraduate programmes. This classification is based primarily on entry/admission qualification of students rather than the level of degree offered. For all undergraduate programmes, students are admitted after 10+2 schooling while for all postgraduate programmes, students are admitted after they have obtained at least a college level Bachelor's degree. Various programmes offered and their specializations are listed below.

A. Bachelor of Technology: (B.Tech.)

Department	Programme	Code
Biochemical Engg. and Biotechnology	B.Tech. in Biochemical Engineering and Biotechnology	BB1
Chemical Engineering	B.Tech. in Chemical Engineering	CH1
Computer Science and Engineering	B.Tech. in Computer Science and Engineering	CS1
Civil Engineering	B.Tech. in Civil Engineering	CE1
Electrical Engineering	B.Tech. in Electrical Engineering	EE1
	B.Tech. in Electrical Engineering (Power and Automation)	EE3
Mathematics	B. Tech. in Mathematics & Computing	MT1
Mechanical Engineering	B.Tech. in Mechanical Engineering	ME1
	B.Tech. in Production and Industrial Engineering	ME2
Physics	B.Tech. in Engineering Physics	PH1
Textile Technology	B.Tech. in Textile Engineering	TT1

B. Dual-Degree : (B.Tech. and M.Tech.)

Department	Programme	Code
Biochemical Engg. & Biotechnology	B.Tech. and M. Tech. in Biochemical Engineering and Biotechnology	BB5
Chemical Engineering	B.Tech. and M. Tech. in Chemical Engineering	CH7
Computer Science and Engineering	B.Tech. and M. Tech. in Computer Science and Engineering	CS5
Mathematics	B. Tech. and M. Tech. in Mathematics & Computing	MT6

C. Master of Technology: (M.Tech.)

Department/Centre	Programme	Code
Applied Mechanics	M.Tech. in Engineering Mechanics	AME
	M.Tech. in Design Engineering	AMD
Chemical Engg.	M.Tech. in Chemical Engineering	CHE
Chemistry	M.Tech. in Molecular Engineering: Chemical Synthesis & Analysis	CYM
Civil Engg.	M.Tech. in Geotechnical and Geoenvironmental Engineering	CEG
	M.Tech. in Rock Engineering and Underground Structure	CEU
	M.Tech. in Structure Engineering	CES
	M.Tech. in Water Resources Engineering	CEW
	M.Tech. in Construction Engineering and Management	CET
	M.Tech. in Construction Technology and Management (*)	CEC
	M.Tech. in Environmental Engineering and Management	CEV
	M.Tech. in Transportation Engineering	CEP
Computer Science & Engg.	M.Tech. in Computer Science and Engineering	MCS
Electrical Engineering	M.Tech. in Communications Engineering	EEE
	M.Tech. in Computer Technology	EET
	M.Tech. in Control and Automation	EEA
	M.Tech. in Integrated Electronics and Circuits	EEN
	M.Tech. in Power Electronics, Electrical Machines and Drives	EEP
	M.Tech. in Power Systems	EES
Mechanical Engg.	Mechanical Design	MEM
	M.Tech. in Industrial Engineering	MEE
	M.Tech. in Production Engineering	MEP
	M.Tech. in Thermal Engineering	MET
Physics	M.Tech. in Applied Optics	PHA
	M.Tech. in Solid State Materials	PHM
Textile Technology	M.Tech. in Fibre Science & Technology	TTF
	M.Tech. in Textile Engineering	TTE
Applied Research in Electronics	M.Tech. in Radio Frequency Design and Technology	CRF
Atmospheric Sciences	M.Tech. in Atmospheric-Oceanic Science and Technology	AST
Interdisciplinary Programme	M.Tech. in Computer Applications	JCA
	M.Tech. in Energy Studies	JES
	M.Tech. in Energy and Environmental Management	JEN
	M.Tech. in Industrial Tribology and Maintenance Engineering	JIT
	M.Tech. in Instrument Technology	JID
	M.Tech. in Optoelectronics and Optical Communication	JOP
	M.Tech. in Polymer Science and Technology	JPT
	M.Tech. in Telecommunication Technology Management	JTM
	M.Tech. in VLSI Design Tools and Technology (*)	JVL

NOTE: (*) These are sponsored programmes.

D. Master of Science (Research): M.S.(R)

Department/Schools	Code
Applied Mechanics	AMY
Bharti School of Telecommunication Technology and Management	BSY
Biochemical Engineering and Biotechnology	BEY
Chemical Engineering	CHY
Civil Engineering	CEY
Computer Science and Engineering	CSY
Electrical Engineering	EEY
Mechanical Engineering	MEY
Amar Nath and Shashi Khosla School of Information Technology	SIY
School of Biological Sciences	SBS

E. Master of Design: (M.Des.)

Department/Schools	Programme	Code
Interdisciplinary	Master of Design in Industrial Design	JDS

F. Master of Business Administration: (M.B.A.)

Department/Schools	Programme	Code
Management Studies	M.B.A.	SMF
	M.B.A. (with focus on Telecommunication Systems management)	SMT
	M.B.A. (with focus on Technology Management) (part-time and evening programme)	SMN

G. Master of Science: (M.Sc.)

Department/Schools	Programme	Code
Chemistry	M.Sc. in Chemistry	CYS
Mathematics	M.Sc. in Mathematics	MAS
Physics	M.Sc. in Physics	PHS

H. Postgraduate Diploma

Department/Schools	Programme	Code
Applied Mechanics	D.I.I.T (Naval Construction) (for candidates sponsored by the Indian Navy)	AMX

The DIIT is also available in every corresponding Master of Technology programme listed in Item C above. It is awarded only to those students who have been able to complete only partially the corresponding M.Tech. degree requirements. For details please see Section 4.6 .

I. Doctor of Philosophy: (Ph.D.)

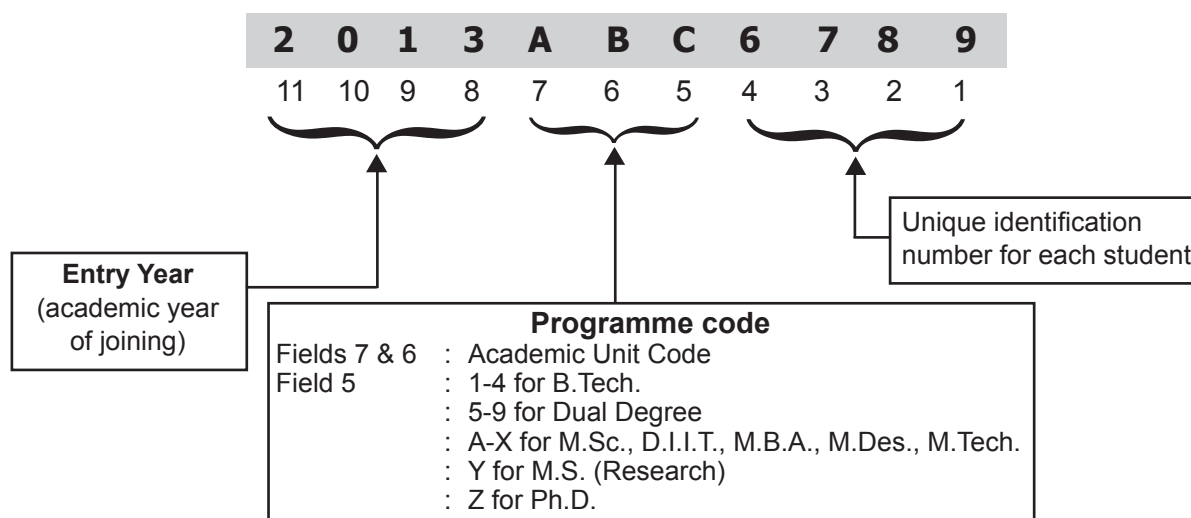

All departments, centres and schools listed in Section 1.2 offer the Ph.D. programme. The two letter code of the academic unit followed by Z corresponds to the Ph.D. code of the respective academic unit. (e.g. MAZ is the Ph.D. code of the mathematics Department). For details please see Section 4.12.

1.4 Student's Entry Number

The entry number of a student consists of eleven alpha-numerals.

In case of a programme change of a student, the programme code in his/her entry number (fields 5, 6 and 7) will be

changed. However, his/her unique identification number will remain unchanged. Such students will have two entry numbers, one prior to programme change and one after the change. At any time, though, only one entry number, that corresponds to the student's present status will be in use.

1.5 Honour Code

The Honour Code of IIT Delhi is given on the inside back cover of this booklet. Every student signs this Honour Code at the time of admission and is expected to adhere to the Honour Code throughout the period of his/her studies at the Institute.

2. COURSE STRUCTURE AND CREDIT SYSTEM

2.1 Course Numbering Scheme

Normally every course at IIT Delhi runs for the full length of the semester. Only exception is for V-type courses which may run for part of the semester. A student registers in advance for courses that he/she wants to study and at the end of the semester a grade is awarded. On obtaining a pass grade, the student earns all the credits associated with the course while a fail grade does not get any credit. Partial credits are not awarded.

Each course is denoted by a unique code consisting of three alphabets followed by three numerals:

(a) Codes for the nature of the course

Table 2. Codes for the nature of courses.

Code	Description
L	Lecture courses (other than lecture hours, these courses can have Tutorial and Practical hours, e.g. L-T-P structures 3-0-0, 3-1-2, 3-0-2, 2-0-0, etc.)
P	Practical / Practice based courses (where performance is evaluated primarily on the basis of practice, practical or laboratory work with LTP structures such as 0-0-3, 0-0-4, 1-0-3, 0-1-3, etc.)
D	Project based courses (e.g. Major, Minor, Mini Projects)
N	Non-graded credit components
Q	Seminar Courses
R	Professional Practices
S	Independent Study
V	Lecture Courses on Special Topics (1 or 2 credits)

(b) Level of the course

The first digit of the numeric part of the course code indicates level of the course as determined by pre-requisite course(s) and/or by the maturity required for registering for the course. The latter requirement is enforced through a requirement of minimum number of earned credits. In general,

- 100 – 400 level courses : Core and elective courses for UG programmes.
These courses are not open to any PG student.
- 500 level courses : Courses for M.Sc. programmes.
These courses are not open to other students.
- 600 level courses : Preparatory/introductory courses for M.Tech. and advanced courses for M.Sc. programmes. These courses are normally not open to UG students.
- 700 - 800 level courses : Core and elective courses for M.Tech., M.Des., M.B.A., M.S.(Research) and Ph.D. programmes. Usually 800 level courses are advanced courses for PG students.

2.2 Credit System

Education at the Institute is organized around the semester-based credit system of study. A student is allowed to attend classes in a course and earn credit for it, only if he/she has registered for that course. Prominent features of the credit system are a process of continuous evaluation of a student's performance/progress and flexibility to allow a student to progress at an optimum pace suited to his/her ability or convenience, subject to fulfilling minimum requirements for continuation and within maximum allowable period for completion of a degree.

A student's performance/progress is measured by the number of credits that he/she has earned, i.e. completed satisfactorily. Based on the course credits and grades obtained by the student, grade point average is calculated. A minimum grade point average is required to be maintained for satisfactory progress and continuation in the programme. Also a minimum number of earned credits and a minimum grade point average should be acquired in order to qualify for the degree. All programmes are defined by the total credit requirement and a pattern of credit distribution over courses of different categories as defined in section 4.2

2.3 Assignment of Credits to Courses

Each course has a certain number of credit(s) or non-graded unit(s) assigned to it depending upon its lecture, tutorial and laboratory/practical contact hours in a week. This weightage is also indicative of the academic expectation that includes in-class contact and self-study outside class hours.

- Lectures and Tutorials** : One lecture or tutorial hour per week over the period of one semester is assigned one credit.
- Practical/Practice** : One laboratory/ practice hour per week over the period of one semester is assigned half credit.

A few courses are without credit and are counted under non-graded (NG) courses.

Example : Course *ELL100 Fundamentals of Electrical Engineering*; 4 credits (3-0-2)

The credits indicated for this course are computed as follows:

3 hours/week lectures	= 3 credits	}	Total = 3 + 0 + 1 = 4 credits
0 hours/week tutorial	= 0 credit		
2 hours/week practicals	= 2 × 0.5 = 1 credit		

Total contact hours for the course = (3 h Lectures + 0 h Tutorial + 2 h Practical) per week = 5 contact hours per week

For each lecture or tutorial credit, the self study component is 1-2 hours/week (for 100-600 level courses) and 3 hours/ week (for 700-800 level courses). The self study component for practicals is 1 hour for every two hours of practicals per week. In the above example, the student is expected to devote a minimum of 3 + 1 = 4 hours per week on self study in addition to class contact of 5 hours per week.

2.4 Earning Credits

At the end of every semester, a letter grade is awarded in each course for which a student had registered. On obtaining a pass grade, the student accumulates the course credits as earned credits. A student has the option of auditing some courses. Grades obtained in audit courses are not counted for computation of grade point average. However, a pass grade is essential for earning credits from an audit course. Section 2.9 defines the letter grades awarded at IIT Delhi and specifies the minimum grade for passing a course.

2.5 Course Content Description

Course content description consists of following components: (i) Course Number, (ii) Title of the Course, (iii) Credit and L-T-P, (iv) Pre-requisites and overlapping courses, if any and (v) List of broad topics covered in the course. Content descriptions for all courses are given in section 8 of this booklet. An example course content description is as follows:

MTL100 Calculus

(3-1-0) 4 Credits

Review of Limit, Continuity and Differentiability, uniform continuity, Mean Value Theorems and applications, Taylor's Theorem, maxima and minima, Sequences and series, limsup, liminf, convergence of sequences and series of real numbers, absolute and conditional convergence.

Reimann Integral, fundamental theorem of integral calculus, applications of definite integrals, improper integrals, beta and gamma functions.

Functions of several variables, limit and continuity, partial derivatives and differentiability, gradient, directional derivatives, chain rule, Taylor's theorem, maxima and minima and method of Lagrange Multipliers.

Double and triple integration, Jacobian and change of variables formula. Parametrization of curves and surfaces, vector fields, divergence and curl, Line integrals, Green's theorem, surface integral, Gauss and Stokes theorems with applications.

2.6 Pre-requisites

Each course, other than 100 level courses, may have specified pre-requisite(s) which may be another course or a minimum number of earned credits or both. A student who has not obtained a pass grade in the pre-requisite(s) or has not earned requisite number of credits will not be eligible to do that course. Example:

TXL372 Speciality Yarns and Fabrics

2 credits (2-0-0)

Prerequisite(s): TXL221/TXL222 and TXL231/TXL232 and EC50

A student who has obtained a pass grade in TXL221 or TXL222, and in TXL231 or TXL232 and has also earned 50 credits will be eligible to register for this course.

Pre-requisite earned credits for some courses of special nature are given below.

Independent Study	65
Mini Project	65
Minor Project (Dual Degree)	100
B.Tech. Project	100
M.Tech. Major Project Part 1 (Dual Degree)	135

If no pre-requisite is specified for 700 and 800 level courses, a UG student needs to earn 75 and 100 credits to register for 700 and 800 level courses, respectively.

2.7 Overlapping/Equivalent Courses

Wherever applicable, overlapping and equivalent courses have been identified for each course. A student is not permitted to earn credits by registering for more than one course in a set of overlapping/equivalent courses. Departments may use these overlapping/equivalent courses for meeting degree/pre-requisite requirements in special circumstances. Example:

CLL113 Numerical Methods in Chemical Engineering

4 credits (3-0-2)

Overlaps with: MTL107, MTP290, MTL445, CVL734, COL726

A student who has earned a pass grade in CLL113 will not be eligible to register for MTL107, MTP290, MTL445, CVL734 or COL726. An overlapping course cannot serve as a substitute for a core course of his/her programme. In the above example, if MTL107 is a core course for a student, he/ she is not allowed to register for CLL113 as a substitute for this core course.

2.8 Course Coordinator

Every course is usually coordinated by a member of the teaching staff of a Department/ Centre/ School in a given semester. This faculty member is designated as the Course Coordinator. He/she has the full responsibility for conducting the course, coordinating the work of other members of the faculty and teaching assistants involved in that course, administering assignments, conducting the tests as well as moderating and awarding the grades. For any difficulty related to a course, the student is expected to approach the respective course coordinator for advice and clarification. The distribution of the weightage for tests, quizzes, assignments, laboratory work, workshop and drawing assignment, term paper, etc. that will be the basis for award of grade in a course will be decided by the course coordinator of that course in consultation with other teachers involved and announced at the start of the semester.

2.9 Grading System

The grade reflects a student's performance in the course. While relative standing of the student is indicated by his/her grades, the process of awarding grades is not necessarily based upon fitting the marks scored by the students to some statistical distribution. The course coordinator and associated faculty for a course formulate appropriate procedure to award grades that are reflective of the student's performance vis-à-vis the expected learning outcomes of the course.

2.9.1 Grade points

The grades and their equivalent numerical points (referred to as Grade Points) are listed in Table 3.

Table 3. Grades and their description.

Grade	Grade points	Description
A	10	Outstanding
A (-)	9	Excellent
B	8	Very good
B (-)	7	Good
C	6	Average

C (-)	5	Below average
D	4	Marginal
E	2	Poor
F	0	Very poor
I	-	Incomplete
NP	-	Audit pass
NF	-	Audit fail
W	-	Withdrawal
X	-	Project Continuation
S	-	Satisfactory completion
Z	-	Course continuation

2.9.2 Description of grades

A grade

An 'A' grade stands for outstanding achievement. The minimum marks for award of an 'A' grade is 80 %. However, individual course coordinators may set a higher marks requirement for awarding an 'A' grade.

C grade

The 'C' grade stands for average performance. This is the minimum grade required to pass in the Major Project Part 1 and Part 2 of Dual degree and 2 year M.Tech. and M.S. Programmes.

D grade

The 'D' grade stands for marginal performance; i.e. it is the minimum passing grade in any course excluding the Major Project courses mentioned above. The minimum marks for award of 'D' grade is 30 %. However, individual course coordinators may set a higher marks requirement.

E and **F** grades

A student who has scored at least 20% aggregate marks in a subject can be awarded an 'E' Grade. The Course Coordinators are, however, free to enhance this limit but should keep the percentage about 10% less than the cut-off marks for 'D' Grade. The Course Coordinators can also specify any additional requirements (to be specified at the beginning of the Semester) for awarding 'E' Grade. Students who obtain an 'E' Grade will be eligible to appear in a repeat major test (re-major test), an examination with weightage same as that of Major test, for only lecture courses ('L' Category Courses described in section 2.1). If they perform satisfactorily, they become eligible for getting the grade converted to a 'D' Grade, otherwise they will continue to have 'E' Grade. However, the student will have only one chance to appear for re-major for an 'E' Grade. The re-major test will be conducted within the first week of the next semester. The date of re-major test of Institute core courses for undergraduate students will be centrally notified, while for all other courses, the date would be announced by the respective course coordinators. A student can appear for a maximum of three such re-major tests in a given semester. If a student can not appear for the re-major test due to any reason(s), he/she will not get any additional chance.

If a student with E grade in a course does not pass the course through a re-major test, or obtains an F grade in the course, he/she has to repeat the course if it is a core course. In case the course is an elective, the student may take the same course or any other course from the same category. 'E' and 'F' Grades are not counted in the calculation of the CGPA; however, these are taken into account in the calculation of the SGPA.

I grade

An 'I' grade is temporarily awarded to a student on his/her request to denote incomplete performance in L (lecture), P (practical), V (special module) category courses. Requests for 'I' grade should be made at the earliest but not later than the last day of major tests. An 'I' grade is awarded in case of absence on medical grounds or other special circumstances, before or during the major examination period, provided the student has met the attendance criterion of the course. Attendance in the course for which 'I' grade is being sought will be certified by the course coordinator of the course.

The course coordinators can instruct all students awarded 'I' grade as well as 'E' grade to appear for a common re-major test. All evaluation requirements for such students in the corresponding course(s) should be completed before the end of the first week of the next semester. Upon completion of all course requirements, the 'I' grade is converted to a regular grade (A to F, NP or NF).

NP and NF grades

These grades are awarded in a course that the student opts to audit. Only elective courses can be audited. Auditing a course is allowed until a date stipulated in the semester schedule. The audit pass (NP) grade is awarded if the student's attendance is above 75% in the class and he/she has obtained at least 'D' grade. The course coordinator can specify a higher criterion, at the beginning of the semester, for audit pass. If the stipulated requirements are not fulfilled, the audit fail (NF) grade is awarded. The grades obtained in an audit course are not considered in the calculation of SGPA, CGPA or DGPA. However, for undergraduate students, the credits will be counted in total earned credits in the respective category, subject to the maximum allowable limit for audit.

W grade

A 'W' grade is awarded in a course from which the student has opted to withdraw. Withdrawal from a course is permitted until the date specified in the Semester Schedule. Withdrawal from PG major project part 2 is allowed only if he/she is given semester withdrawal. The W grade is mentioned on the grade card.

X grade

The 'X' grade is awarded for incomplete work in Independent Study, Mini Project, Minor Project, or Major Project Part 1 and Part 2, based on the request of the student. On completion of the work, X grade can be converted to a regular grade within the first week of the next semester. Otherwise, the student will be awarded 'X' grade on a permanent basis and it will appear in his/her grade card. Further, the student will be required to register for the course in the next semester. The credits of the course will be counted towards his/her total load for the semester. In case of Major Project Part 1, the student will not be permitted to register for Major Project Part 2 simultaneously as Major Project Part 1 is a pre-requisite for Major Project Part 2. A regular full-time student can be awarded 'X' grade only once in a course, other than the summer semester. A part-time M.Tech. student is permitted a maximum of two X-grades in the major project part-2.

S and Z grades

The 'S' grade denotes satisfactory performance and completion of a course. The 'Z' grade is awarded for non-completion of the course requirements, and if it is a core course, the student will have to register for the course until he/she obtains the 'S' grade. The specific courses in which S or Z grades are awarded for undergraduate students are:

- (i) Introduction to Engineering and Programme
- (ii) Language and writing skills
- (iii) NCC/NSO/NSS
- (iv) Professional Ethics and Social Responsibility
- (v) Communication Skills/Seminar
- (vi) Design/Practical Experience

2.10 Evaluation of Performance

The performance of a student will be evaluated in terms of three indices, viz., the Semester Grade Point Average (SGPA) which is the Grade Point Average for a semester, Cumulative Grade Point Average (CGPA) which is the Grade Point Average for all the completed semesters at any point in time and Degree Grade Point Average (DGPA). Degree Grade Point Average (DGPA) is calculated on the basis of the best valid credits in each category, after graduation requirements in all categories are met.

The Earned Credits (E.C.) are defined as the sum of credits for courses in which a student has been awarded pass grades. Points secured in a semester = \sum (Course credits \times Grade point) for all courses in which pass grade has been obtained). The SGPA is calculated on the basis of grades obtained in all courses the student registered for, in the particular semester, except audit courses.

$$\text{SGPA} = \frac{\text{Points secured in the semester}}{\text{Credits registered in the semester, excluding audit and S / Z grade courses}}$$

The CGPA is calculated on the basis of pass grades obtained in all completed semesters, except audit courses and courses in which S/Z grade is awarded.

$$\text{CGPA} = \frac{\text{Cumulative points secured in courses with pass grades}}{\text{Cumulative earned credits, excluding audit and S / Z grade courses}}$$

Example of these calculations is given in Table 4.

Table 4 (a) Typical academic performance calculations - I semester

Course no.	Course credits	Grade awarded	Earned credits	Grade points	Points secured
(column 1)	(column 2)	(column 3)	(column 4)	(column 5)	(column 6)
MTLXXX	5	C	5	6	30
COLXXX	4	C (-)	4	5	20
PYLXXX	4	A	4	10	40
PYPXXX	2	B	2	8	16
MCLXXX	4	E	0	2	08
TXNXXX	2	S	2	—	—

Credits registered in the semester (total of column 2) = 21

Credits registered in the semester excluding audit and S/Z grade courses = 19

Earned credits in the semester (total of column 4) = 17

Earned credits in the semester excluding audit and S/Z grade courses = 15

Points secured in the semester (total of column 6) = 114

Points secured in the semester in all passed courses (*total of column 6 and pass grade*) = 106

$$\text{SGPA} = \frac{\text{Points secured in the semester}}{\text{Credits registered in the semester, excluding audit and S / Z grade courses}} = \frac{114}{19} = 6.000$$

$$\text{CGPA} = \frac{\text{Cumulative points secured in courses with pass grades}}{\text{Cumulative earned credits, excluding audit and S / Z grade courses}} = \frac{106}{15} = 7.067$$

Semester performance: Earned credits (E.C.) = 17 SGPA = 6.000

Cumulative performance: Earned credits (E.C.) = 17 CGPA = 7.067

Table 4 (b) Typical academic performance calculations - II semester

Course no.	Course credits	Grade awarded	Earned credits	Grade points	Points secured
(column 1)	(column 2)	(column 3)	(column 4)	(column 5)	(column 6)
MTLXXX	5	B	5	8	40
ELLXXX	4	A (-)	4	9	36
CMLXXX	4	W	—	—	—
CMPXXX	2	B (-)	2	7	14
MCLXXX	4	C	4	6	24
APLXXX	4	A	4	10	40
NLNXXX	1	S	1	—	—

Credits registered in the semester (*total of column 2*) = 24

Credits registered in the semester excluding audit and S/Z grade courses	=	23
Earned credits in the semester (<i>total of column 4</i>)	=	20
Earned credits in the semester excluding audit & S/Z grade courses	=	19
Points secured in this semester (<i>total of column 6</i>)	=	154
Points secured in this semester in all passed courses (<i>total of column 6 & A-D grade</i>)	=	154
Cumulative points secured = 106 (I semester) + 154 (this sem.)	=	260
Cumulative earned credits = 17 (I semester) + 20 (this sem.)	=	37

$$\text{SGPA} = \frac{\text{Points secured in the semester}}{\text{Credits registered in the semester, excluding audit and S / Z grade courses}} = \frac{154}{19} = 8.105$$

$$\text{CGPA} = \frac{\text{Cumulative points secured in courses with pass grades}}{\text{Cumulative earned credits, excluding audit and S / Z grade courses}} = \frac{106 + 154}{15 + 19} = 7.647$$

Semester performance: Earned credits (E.C.) = 20 SGPA = 8.105

Cumulative performance: Earned credits (E.C.) = 37 CGPA = 7.647

On completing all the degree requirements, the degree grade point average, DGPA, will be calculated and this value will be indicated on the degree/diploma. The DGPA will be calculated on the basis of category-wise best valid credits required for graduation.

A student who has earned the requisite credits but does not meet the graduation DGPA requirement may do additional courses in any elective category to meet the DGPA requirement within the maximum permissible time limit.

3. REGISTRATION AND ATTENDANCE

3.1 Registration

Registration is a very important procedural part of the academic system. The registration procedure ensures that the student's name is on the roll list of each course that he/she wants to study. No credit is given if the student attends a course for which he/she has not registered. Registration for courses to be taken in a particular semester will be done according to a specified schedule before the end of the previous semester. Each student is required to complete the registration process on the web based system. The student must also take steps to pay his/her dues before the beginning of the semester. Students who do not make payments by a stipulated date can be de-registered for the particular semester.

In-absentia registration or registration after the specified date will be allowed only in rare cases at the discretion of Dean, Academics. In case of illness or absence during registration, the student should intimate the same to his/her Programme coordinator and Dean, Academics.

Brief description of registration related activities is given in the following paragraphs. The relevant dates are included in the Semester Schedule that is made available before the start of the semester. There may be changes in the schedule and/ or procedure of registration from time to time. The students are intimated through e-mail about any such change to the e-mail address allocated to each student by the Institute at the time of admission. **This e-mail address is the only channel through which the Institute would communicate with the student. For cyber security reasons, e-mail accounts/ kerberos logins that are not used for a certain length of time are disabled and such accounts locked/ deleted by the Institute. Students must therefore login into their e-mail accounts / kerberos logins regularly.**

3.2 Registration and Student Status

Failure to register before the last date for late registration will imply that the student has discontinued studies and his/her name will be struck-off the rolls.

All registered students, except part-time postgraduate students and casual students, are considered as full-time students at the Institute. They are expected to be present at the Institute and devote full time to academics and

co-curricular and extra curricular activities in the campus.

3.3 Advice on Courses

At the time of registration, each student must finalize the academic programme, keeping in view factors such as, minimum/maximum numbers of total and lecture credits, past performance, backlog of courses, SGPA/CGPA, pre-requisite(s), work load and student's interests, amongst others. Special provisions exist for advising academically weak students. Details are given in section 4.7.

3.4 Registration Validation

Before the commencement of classes of each semester, on a date specified in the Semester Schedule, every student is required to be present on campus and validate his/her registration by logging in at the website. Students who do not do registration validation will not be permitted to add/drop courses.

3.5 Minimum Student Registration in a Course

An undergraduate course (of 100, 200, 300, or 400 level) will run if a minimum of 12 students register for the course. Under special circumstances, a departmental elective course may be allowed to run with minimum registration of 8 students, with prior permission of Chairman, Senate. A 700 or 800 level course can run with a minimum of 4 students. This requirement will be verified on the last date for Add/Drop. Courses without the minimum enrolment will be dropped. The students who had registered for these courses will be de-registered, and they will be given one more day for adding a course in lieu of the dropped course.

3.6 Late Registration

For reasons beyond his/her control, if a student is not able to register or send an authorized representative with a medical certificate, he/she may apply to the Dean, Academics for late registration. Dean, Academics will consider and may approve late registration in genuine cases on payment of an extra fee called late registration fee. Late registration is permitted until a date specified in the Semester Schedule, typically one week after the start of the semester.

3.7 Addition, Deletion , Audit and Withdrawal of Courses

- a) Add/Drop: A student has the option to add courses that he/she has not registered for, or drop courses for which he/she has already registered for. This facility is restricted to a period stipulated in the Semester Schedule, during the first week of the semester.
- b) Audit: A student may apply for changing a credit course to an audit course before a deadline specified in the Semester Schedule.
- c) Withdrawal: A student who wants to withdraw from a course should apply before a deadline specified in the Semester Schedule. A withdrawal grade (W) will be awarded in such cases.

Appropriate web-based applications are to be used for availing of the above mentioned options.

3.8 Semester Withdrawal

Semester withdrawal and absence for a semester under different conditions viz. (i) medical and personal grounds (ii) industrial internship (iii) exchange / deputation to another academic institution in India or abroad, and (iv) disciplinary condition can be granted on application. The condition as per the following should be clearly specified in the application.

- (a) Semester Withdrawal (SW) reflects the condition in which a student is forced to withdraw from all courses in the semester for medical conditions or for a part-time student when he/she is sent for an outstation assignment by his/her employer. A student can apply for semester withdrawal if he /she has missed 20 or more teaching days on these grounds. Under no circumstances an application for semester withdrawal be acceptable after the commencement of major. A student is not permitted to request for withdrawal with retrospective effect.
- (b) Semester Leave (SL) indicates the situation in which a student is permitted to take one or more semester off for industrial internship or any other assignment with prior approval and planning. The application is to be routed through his/her advisor / programme coordinator and Head of the concerned Department / Centre / School.

Dean, Academics is the final approving authority for such requests. All such applications must be processed before the beginning of the semester in which the leave will be taken. At present, JEE-entry B.Tech. and dual degree students are allowed one extra semester for completion of the programme for every semester leave for industrial internship. Such students are permitted maximum of two semesters of leave. The full-time 2 year M.Tech./M.S. students would be permitted a maximum of one semester leave for industrial internship or other assignment as approved by the Dean. These semesters will not be counted towards the maximum permitted time period for completion of the degree similar to the provision of JEE entry students.

- (c) When a student registers at another academic institution in India or abroad with the expectation of credit transfer or research work through a pre-approved arrangement including an MoU, the student should be considered as being on a Semester Exchange (SE). The SE period will be counted towards the total period permitted for the degree.
- (d) When a student is suspended for one or more semesters on disciplinary grounds, the student status should be called Disciplinary Withdrawal period (DW).

3.9 Registration in Special Module Courses

Special module courses, i.e. 'V'-category courses, are 1 or 2 credit courses that can be offered at the beginning of the semester and the regular registration procedure will be followed. A 'V'-category course may also be offered during the semester. In such a case, students will be allowed to add this course before classes for the course begin. These courses will usually cover specialized topics that are not generally available in the regular courses. Eligible students can register for these courses. The course coordinator will evaluate the students' performance and award a letter grade. The credits so earned will count towards the appropriate category for degree completion purposes.

3.10 Registration for Non-Graded Units

Details pertaining to registration and other modalities of earning non-graded units are given in section 7 of this booklet.

3.11 Pre-requisite Requirement(s) for Registration

A student can register for a course only if he/she fulfills the pre-requisite requirement(s). Request for relaxation of pre-requisite requirement(s) may be raised by students under special circumstances. Such a request needs approval of the Departmental Faculty Advisor and Chairman Grades and Registration.

3.12 Overlapping/Equivalent Courses

A student is not allowed to earn credits from two overlapping /equivalent courses. Overlapping/equivalent courses, wherever applicable, are specified in the Description of Course Contents.

3.13 Limits on Registration

An undergraduate student (B.Tech. or Dual Degree) should register for a minimum of 12 credits in a semester. The maximum number of credits permitted for a UG student in a semester is 26, with a provision to register for up to 28 credits in a maximum of two semesters during the entire period of their study. This number would be reduced to a maximum of 1.25 times the average credits earned by the student in the past two registered semesters, in case the student is placed on probation on the basis of academic performance.

3.14 Registration and Fee Payment

Every registered student must pay the stipulated fees in full before the specified deadlines. In the event that a student does not make these payments, he/she can be de-registered from all courses and his/her name can be struck off from the rolls.

3.15 Continuous Absence and Registration Status

If a student is absent from the Institute for more than four weeks without notifying the Head of Department/Centre/School or Dean, Academics his/her registration will be terminated and name will be removed from the Institute rolls.

3.16 Attendance Rule

It is mandatory for the students to attend all classes. Attendance Records of all students for each course will be maintained.

The Course Coordinator will announce the class policy on attendance with respect to grading etc., at the beginning of the semester. This shall be done keeping in mind the importance of classroom learning in the teaching-learning process. Once the class attendance policy has been made clear to all the students registered for the course, the Course Coordinator will implement the same in totality.

For the purpose of attendance calculation, every scheduled practical class will count as one unit irrespective of the number of contact hours.

Attendance record will be maintained based upon roll calls (or any equivalent operation) in every scheduled lecture, tutorial and practical class. The course coordinator will maintain and consolidate attendance record for the course (lectures, tutorials and practicals together, as applicable).

A Course Coordinator may choose any one or more of the following as attendance policy (approved by the Senate):

- (a) The Course Coordinator can assign 10% of the total marks to surprise quiz. If attendance of the student is greater than 90%, result of the best three quizzes will be considered else average of all quizzes will be considered.
- (b) The Course Coordinator can allocate specific marks for participation in discussions in the class on a regular basis.
- (c) If a student's attendance is less than 75%, the student will be awarded one grade less than the actual grade that he (she) has earned. For example, a student who has got A grade but has attendance less than 75% will be awarded A (-) grade.
- (d) A student cannot get NP for an audit course if his attendance is less than 75%.

The Course Coordinator can implement any other attendance policy provided the policy is approved by the Dean, Academics.

Attendance statistics will also be used in the following way:

- (a) If a student's attendance is less than 75% in more than two courses without any valid reason in a semester, he/she will be issued warning and put under probation. If this is repeated, he/she will not be allotted a hostel seat in the next semester.
- (b) If a student's attendance is less than 75% in any course or CGPA is less than 7.0, then he/she will not be eligible to hold any position of responsibility in the hostel/institute in the next semester.

4 UNDERGRADUATE DEGREE REQUIREMENTS, REGULATIONS AND PROCEDURES

4.1 Overall requirements

4.1.1 B.Tech.

The total credit requirement for the B. Tech. (4-year programme) is 145-155 credits (exact requirement is discipline specific). For B. Tech. programmes, the total credits are distributed over following categories :

- (a) Institute Core (IC) : includes
 - Basic Sciences (BS) : Mathematics, Physics, Chemistry and Biology courses
 - Engineering Arts and Science (EAS): Fundamental engineering courses
 - Humanities and Social Sciences (HUSS): At least two courses to be taken in the 2XX category and at least one course to be taken in the 3XX category.
- (b) Departmental Core (DC): includes courses of relevant discipline and some additional BS/EAS courses that are specified by the Department as Programme Linked (PL) courses.
- (c) Departmental Electives (DE): electives related to the parent discipline.
- (d) Open Category (OC) : electives can be taken outside or within the discipline ; these credits can be used towards departmental specialization or minor area also (see Sec 4.6).
- (e) Non graded Core (NG) units : These are core requirements and can be earned through formal academic activity and informal co-curricular or extra-curricular activities.

4.1.2 Dual degree programmes :

The total credit requirements for a dual degree programme would depend upon the credit requirements of the B.Tech. and M.Tech programmes that constitute the Dual Degree. The minimum credit requirement for the award of Dual Degree would typically be 10 less than the total credits of the constituent B.Tech. and M.Tech. programmes. The B.Tech. requirements for a dual degree are same as that given in section 4.1.1. The M.Tech. part is divided

into two categories – Programme Core (PC) and Programme Elective (PE).

4.2 Breakup of Degree Requirements

4.2.1 Earned Credit Requirements

The minimum earned credit/unit requirements for B. Tech. degree are given in Table 5.

Table 5 : Degree requirements of B.Tech. programmes

	Category	Symbol	B. Tech. Requirements	Remarks
1	Institute Core	IC	55 Credits	Common to all disciplines
2	Programme Linked EAS/BS	PL	0-15 Credits	Discipline specific as decided by the Department
3	Departmental core	DC	65-80 with min 10 as DE	Discipline specific
4	Departmental Elective	DE		
5	Open Category	OC	10 Credits	Open to student's choice
6	Non-graded Core	NG	15 units	See Sec. 4.3
	Total		145-155 Credits +15 nongraded units	

4.2.2 Degree Grade Point Average (DGPA) Requirement

A student must obtain a minimum DGPA of 5.0 to be eligible for award of the B.Tech. degree. The minimum DGPA requirement for M.Tech. part of dual degree programme is 6.0. All exceptions to the above conditions will be dealt with as per following regulations:

- (a) If a student completes required credits for B.Tech. with DGPA less than 5.0, then the student will be permitted to do additional elective courses under appropriate category to improve the DGPA within the maximum time limit for completion of B.Tech. degree. In case a DGPA of 5.0 or more is achieved within the stipulated period, a B.Tech degree will be awarded and in case the same is not achieved no degree will be awarded and the student may apply for a diploma.
- (b) If a student completes requisite credits for Dual Degree Programme:
 - (i) with B. Tech. DGPA less than 5.0 but M.Tech. DGPA more than 6.0
The student will be permitted to do additional elective courses (under appropriate category) to improve the DGPA for completion of B. Tech. part within the maximum time limit. In case a DGPA of 5.0 or more is achieved for B.Tech., the student will become eligible for award of the Dual Degree (B.Tech. & M. Tech.) and in case the same is not achieved no degree will be awarded and the student may apply for a diploma.
 - (ii) with B. Tech. DGPA more than 5.0 but M. Tech. DGPA less than 6.0
The student may opt to do additional elective courses (PE category only) to improve the DGPA within the maximum time limit. If no programme elective (PE) courses are available, other relevant 700 and 800 level courses as certified by the department can be done for the purpose of improving the DGPA. In case DGPA of 6.0 or more is achieved for the M. Tech. part, the student will be eligible for award of the Dual Degree (B. Tech. & M. Tech.). However, in case the same is not achieved at the end of the stipulated period, the student will be eligible for the award of only B. Tech. degree, provided a written request for the same is made to the Dean, Academics.
 - (iii) with B. Tech. DGPA less than 5.0 and M. Tech. DGPA less than 6.0
The student will be permitted to do additional elective courses under appropriate categories to improve the DGPA for completion of B. Tech. and courses under PE category for completion of M. Tech. degree within the maximum time limit. If no programme elective courses are available, relevant 700 and 800 level courses as certified by the department can be done for the purpose of improving the DGPA of the M.Tech. part. In case a DGPA of 5.0 or more for B.Tech. and 6.0 or more for M.Tech. are achieved, the student will be eligible for award of the Dual Degree (B.Tech. & M.Tech.). However, in case a DGPA 5.0 or more for B.Tech. is achieved but the DGPA of 6.0 or more for M.Tech. is not achieved at the end of stipulated period, the student will be eligible for award of only B.Tech. degree provided a written request for the same is made to the Dean, Academics.

- (c) A student may be permitted to do additional elective courses under appropriate elective categories for improving DGPA, even if he/she satisfies all graduation requirements. The student may be permitted to register for courses in the additional semesters, up to the maximum limit in terms of registered semesters for improving his/her DGPA provided a request for the same is made to the Dean, Academics within 15 days of the notification of grades in the final semester. During this period when the student is registered for improving DGPA, no hostel facilities or assistantship will be provided to the student.
- (d) A student is eligible to apply for a Diploma provided he/ she has earned 100 credits and has exhausted the maximum number of permitted registered semesters for completion of his/ her degree. If the student has completed 50 credits (out of 100 credits) from his/ her DC+DE+PC+PE categories then the student will be awarded 'Undergraduate Diploma in the respective discipline' on completion. If the student has not completed 50 credits from these categories but has completed 100 credits then he/ she will be awarded 'Undergraduate Diploma in Engineering'. The Diploma is not equivalent to an undergraduate degree.
- (e) No self-study course will be permitted for the purpose of improvement of DGPA.

4.2.3 Audit Courses

Audit facility is open to all undergraduate students who have 85 Earned Credits. A student will be permitted to do any number of audit courses over and above the graduation requirements. The audit limits for graduation are:

- (a) B.Tech. (4-year) programme: A maximum of 8 credits from the elective courses in any category out of the total credits required for B.Tech. degree may be completed on audit basis.
- (b) Dual-degree programme: A maximum of 8 credits from the elective courses in any category may be completed on audit basis from the UG part of the programme.

4.3 Non-graded Core Requirement

As part of the curriculum, non-graded units have been prescribed as core requirements for the undergraduate degree. These units can be earned through a combination of formal academic activity and informal co- curricular or extra-curricular activities. The components of non-graded core requirement are listed in Table 6.

Table 6 : Components of Non-Graded Core Requirement

	Components	Units
1	Introduction to the Engineering and Programme	02
2	Language and Writing Skills	02
3	NCC/NSO/NSS	02
4	Professional Ethics and Social Responsibility	02
5	Communication Skills / Seminar	02
6	Design/Practical Experience :	05
	Total	15

The 15 units listed in Table 6 will be core requirement for all undergraduate programmes. A student must earn these 15 units over the complete duration of the programme with special considerations and requirements for each component. A student must get an S grade to earn these units. Incomplete performance in these components will be indicated by a Z grade. A brief description of the six components is given below.

(a) Introduction to Engineering (NIN100) (1 unit)

All students will be required to undergo exercises in the first semester, for earning the units. These may involve listening to lectures, developing project reports based upon self-study, visit to laboratories (in and outside the Institute) and industry, executing simple scientific or engineering projects.

Introduction to Programme (XXN101) (1 unit)

This would be discipline specific introduction to programme. This would be offered in the third semester. In the Course no, 'XX' is the Course code prefix as shown in Table 1. An exception to this are the ME2 and EE3 Programmes, for which the course number would be MCN111 and ELN 111 respectively.

(b) Language and Writing Skills (NLN100–101) (2 units)

All students will be required to undergo exercises in the first year, spanning over two semesters. These exercises will be designed to impart language skills – enhancing their ability of listening comprehension, reading and writing in English. Further, students will be exposed to principles of English Grammar and nuances of technical writing. These exercises will be tailored according to the background of the students. The background of the students will be assessed through a test to be conducted at the beginning of the semester. These exercises can be organized either during normal academic hours or outside. A student can be prescribed self learning exercises or additional practice sessions during vacations as requirement for securing an S grade.

(c) NCC/NSO/NSS (NCN100/NSN100/NPN100) (2 units)

NCC/NSO/NSS will form part of core requirement of the degree. Students will be required to earn 2 units from these activities. The faculty coordinator will devise a scheme for awarding these units.

(d) Professional Ethics and Social Responsibility (2 units)

There is increasing consensus worldwide that professional ethics need to be incorporated into the engineering curriculum to provide students exposure to the kind of professional ethical dilemmas they might face on an individual basis as well as the larger ethical aspects of technology development. Workshops, discussions/ debates will be organized to sensitize students about Professional Ethics and Social Responsibility. This course will be also associated with 2 units implying total involvement of about 100 hours. Involvement of students in these activities will be monitored by the coordinator for awarding the S grade.

Part-1 : Regular Classroom Contact (NEN100-101) (1 unit)

The first part of PESR involves regular sessions of 1.5-2 hours with a faculty mentor. Activities in the sessions would be decided by the faculty mentor, with a total of 14-15 hours in regular sessions in each of the first two semesters. NEN100 and NEN101 are compulsory for all students, and a student will earn one unit by getting S grade in both these courses.

Part-2 : Case Studies and Practical / Field Activity (NEN200 and NEN201 / NEN202 / NEN203)

The Second unit under PESR has two components. The first component, Professional Ethics Case Studies, is compulsory, and is offered under the course number NEN200. For the second component, the student can choose to participate in any one out of a large variety of activities relevant to the core themes of PESR. These activities have been divided into three broad categories, viz., (a) PESR internships (b) PESR workshops and (c) PESR projects with separate course numbers NEN201, NEN202 and NEN203 respectively. All requirements of PESR non-graded component should be completed before the beginning of 7th semester.

(e) Communication Skills (NQN100–101) (2 units)

“Communication skills is an essential requirement for a modern engineer. As a part of the degree requirements, undergraduate students will have to earn 2 units in communication skills.

- (i) Students need to register for at least one topic-specific seminar course in his / her parent department for earning one unit. These courses will be elective, offered in each semester. These seminar sessions will be held for two hours per week. Multiple such courses can run in parallel. These seminars will be open to all students and faculty of IIT Delhi. These seminars can be scheduled outside office hours as well.
- (ii) Further, students can earn the remaining one unit through any one of the following means:
 - By successfully undergoing a Communication Skill course/workshop as an activity approved by Dean, Academics.
 - By documentary evidence of excellence in debating and/or writing as certified by faculty in-charge of these activities.
 - By participating in course seminars of regular courses the student is attending; for example regular L courses can have optional seminar component.
 - Registering and completing a seminar course offered by any Department/Centre/School.

A student will be required to earn these credits in the 3rd and/or 4th year.

(f) Design/Practical Experience (NDN100-104/ XXT200-400) (5 units)

The objective of this non graded core requirement component is to give opportunities to students to acquire substantial design and practical experience both as a part of formal courses as well as in an informal setting. Second and even more important objective of this course is to inculcate design thinking among students and facilitate gaining some design immersion experience. Design/Practical Experience component is introduced to promote learning by doing which does two important things: it allows students to immerse themselves in the environment in which work is to be done, so that they can understand the values and expectations of the target beneficiaries. Secondly it enables a fresh look at problems, not only at the ways of defining them, but also at the ways to solve those including skill-sets that are required to address them. A shift from problem based learning (acquisition of knowledge) to project based learning (application of knowledge), where the projects are grounded in problems outside the classrooms and labs in everyday scenarios, will involve students in reality, and reality in education. Design and Practical Experience bridges division between the curricular and the co-curricular, and encourage curiosity and involvement that arise out of total absorption in a subject of interest. Non-graded units in Design and Practical Experience can be earned through one or more the following:

- Specialized Elective Courses related to Design and Practical Experience (Maximum 2 Units)
- Regular Courses with optional Design and Practical Experience Component (Maximum 2 Units)
- Summer/ winter/ semester/ SURA/ DISA projects with Institute faculty, not evaluated for earning credits (Maximum 2 units)
- Co-curricular projects such as Robocon, SAE-mini-baja, etc. (Maximum 2 Units)
- Summer Internships with Industry (Maximum 2 Units)
- One Semester Internship (Maximum 5 Units)
- Workshop Module on Design and Practical Experience offered by Faculty I Visitors (1 Unit each)

4.4 Maximum duration for completing degree requirements

(a) The maximum permitted duration of each programme will be determined in terms of number of registered regular semesters, hereinafter called registered semesters. Any semester in which a student has registered for a course will be called a registered semester subject to the following:

- (i) Only the First and Second semesters of an academic year can be registered semesters. The summer semester will not be counted as a registered semester.
- (ii) A semester when a student has been granted semester withdrawal or granted semester leave will not be considered as a registered semester.
- (iii) The semester when a student is suspended from the Institute on disciplinary grounds will not be counted towards the number of registered semesters.

The summer semesters shall normally be available for earning credits. However, after the student has registered for the maximum permissible number of registered semesters, the subsequent summer semesters will not be available for earning credits.

(b) The maximum permissible number of registered semesters for completing all degree requirements are defined in Table 7.

Table 7. Maximum permissible duration for completing degree requirements.

Programme Name	Maximum number of registered semesters permitted for completing degree requirements
B.Tech.	12*
Dual Degree	14*
*If a student opts for the slow-paced programme, then the maximum permissible number of registered semesters shall be increased by two semesters.	

4.5 Absence During the Semester

- (a) A student must inform the Dean, Academics immediately of any instance of continuous absence from classes.
- (b) A student who is absent due to illness or any other emergency, up to a maximum of two weeks, should approach the course coordinator for make-up quizzes, assignments and laboratory work.
- (c) A student who has been absent from a minor test due to illness should approach the course coordinator for a make-up test immediately on return to class. The request should be supported with a medical certificate from institute's medical officer. A certificate from a registered medical practitioner will also be acceptable for a student normally residing off-campus provided registration number of the medical practitioner appears explicitly on the certificate.
- (d) In case a student misses a minor test on the same day on which he/she has appeared in another test, a medical certificate from the institute's medical officer will only be acceptable.
- (e) In case of absence on medical grounds or other special circumstances, before or during the major examination period, the student can apply for 'I' grade. At least 75 % attendance in a course is necessary for being eligible for request of I-grade in that course. An application requesting I-grade should be made at the earliest but not later than the last day of major tests. An online application should be made by the student. On submission of a medical certificate / Dean's permission, the UG section verifies the certificate and forwards the request to the concerned course coordinator. The course coordinator verifies the attendance requirement and forwards the application to the Head of the Department/Centre/School of the student's programme. Head's approval is contingent upon the satisfaction of attendance requirement. On approval, an 'I' grade is awarded to the student. All evaluation requirements for students with 'I' grade should be completed before the end of the first week of the next semester. Upon completion of all course requirements, the 'I' grade is converted to a regular grade (A to F, NP or NF).
- (f) In case the period of absence on medical grounds is more than 20 working days during the semester, a student may apply for withdrawal from the semester, i.e. withdrawal from all courses registered that semester. Such application must be made as early as possible and latest before the start of the major tests. No applications for semester withdrawal will be considered after the major tests have commenced. Dean, Academics, depending on the merit of the case, will approve such applications. Partial withdrawal from courses registered in a semester is not allowed.
- (g) If a student is continuously absent from the institute for more than four weeks without notifying the Dean Academics, his/her name will be removed from institute rolls.

4.6 Conditions for Termination of Registration, Probation and Warning

If the performance at the end of first two registered semesters (not including summer semester) is poor, then the student can opt to start afresh, or else his/her registration will be terminated. The criteria for "poor" performance at the end of the second registered semester are defined in Table 8.

Table 8. Criteria for Poor Performance at the end of the second registered semester

	Earned credits		Decision
	GE/OBC	SC/ST/PD	
Poor performance	≤ 22	≤ 18	Re-start (once only) or Termination of registration

- (a) If a student chooses to restart after the first two registered semesters, then his/her credits earned and semesters registered will not be carried over. The re-start will be indicated on the transcript. The re-start will be permitted only once. If at the end of two registered semesters after re-start, the earned credits are less than or equal to 22 for GE/ OBC or less than or equal to 18 for SC/ST/PD students, then the registration will be terminated.
- (b) Each student is expected to earn at least 12 credits in each registered semester with an SGPA greater than or equal to 5.0. If the performance of a student at the end of any registered semester is below this minimum acceptable level, then he/she will be placed on probation, a warning shall be given to him/her and intimation sent to the parents.

- (c) A student placed on probation shall be monitored, including mandatory attendance in classes, special tutorials and mentoring. Mentoring would comprise structured guidance under a senior/postgraduate student.
- (d) If the performance of a student on probation does not meet the criterion in item (b) in the following registered semester, then the student would face termination, and will be permitted to register by the Dean, Academics only if the department makes a favourable recommendation. The Head of the Department's recommendation shall be prepared after consultation with the student, and should include (i) feasibility of completing the programme requirements, and (ii) identification of remedial measures for the problems leading to poor performance.
- (e) The registration of any student will be limited to 1.25 times the average earned credits of the previous two registered semesters, subject to a minimum of 12 credits and a maximum of 26 credits.

Slow-paced programme

- (a) If a student has earned the minimum credits specified in Table 8 for continuation but has less than 28 Earned Credits at the end of the first two registered semesters, he/ she will be eligible to opt for the slow-paced programme. A student opting for such a programme shall be permitted two additional registered semesters for completing degree requirements as indicated in Table 7.
- (b) In the slow paced programme, the upper limit for credits registered in a semester will be 18. A student in this programme is expected to earn at least 9 credits with minimum SGPA of 5.0 in any semester, falling which he/ she will be issued a warning and placed on probation.
A student placed on probation would be monitored, including mandatory attendance in special tutorials and mentoring.
If the performance of a student on probation does not meet the above criterion in the following registered semester, then the student would face termination and will be permitted to register by the Dean Academics only if the department makes a favourable recommendation. The Head of the Department's recommendation shall be prepared after consultation with the student, and should include (i) feasibility of completing the programme, and (ii) identification of remedial measures for the problems leading to poor performance.
- (c) The semester-wise schedule of the slow-paced programme shall be defined by the respective department for each student

4.7 Scheme for Academic Advising of Undergraduate Students

Advising Scheme for Regular Students

- (a) There is a class committee for each entry year of all programmes. The class committee is responsible for providing consistent and uniform academic advice to the entire batch of students.
- (b) Class committee shall consist of a Chairman, at least two faculty members of the department (one of them will function as convenor of the class committee) and elected student representatives (as per CAIC constitution) including a student coordinator. All student coordinators of courses intended for the batch in a given semester and special advisors of academically weak students will be permanent invitees to the class committee. The faculty members in the class committee would be referred to as Faculty Mentors for the batch.
- (c) A Chairperson appointed for each entry year of students by the Head of the Department shall be associated with the batch till it graduates and will provide basic guidance for formulating course plan and electives for the students of the batch.
- (d) The Convenor of a class committee will be appointed in a year-specific fashion - for example, the convenor of the second year class committee would continue in the same position for 3 years, serving consecutive batches.
- (e) Students can approach any class committee member for academic advice before registration. In other words, all the three members of the class committee will have the functional role of mentor and local guardian for all the students. In case of need for any exception and relaxation in rules or regulations pertaining to registration of courses, the class committee convenor will approve and forward the request.
- (f) The faculty members of the committee in consultation with the elected representatives of the students will provide academic advice applicable to all the students in general. The class committee is also expected to discharge following responsibilities
- (g) Considering mid-semester feed-back about courses running in the current semester
 - (i) Identifying electives for the subsequent semester
 - (ii) Addressing issues related to scheduling and categorisation of courses
 - (iii) Organising STIC events for the batch.
- (h) The class committee convenor with the support of student coordinator will organise at least one Student-

Teacher Interaction Committee (STIC) event in each semester for interaction between class committee members and all the students of the batch.

- (i) The Chairman, Convenor and the other faculty members of first year class committee would be identified by the Department prior to the orientation of new students. During orientation, students and their parents will be introduced to these class committee members.

Advising Scheme for Academically Weak Students

- (a) The students on probation in each batch will be put under a special advisor, identified by the department, who is expected to monitor the students on probation in a personalised manner. Normally, not more than 5-8 students would be assigned to a special advisor. Heads of Departments will appoint special advisors at the beginning of an academic session.
- (b) A meeting of the special advisors with Dean, Academics would be held at the beginning of each semester for coordination of the advising process.
- (c) A student on probation is expected to be in close contact with the advisor by meeting him/her at least once every 3 weeks for the entire period during which the student continues to remain in probation. Special advisors will be invitees to the class committee meetings.
- (d) Student advisor in consultation with the parents and student counsellor, if required, will make a student-specific academic plan. The special advisor is expected to
- Closely interact with the weak student and his/her parents
 - Formulate individualised academic plan
 - Manage and track counselling process of the student, if any, in coordination with the Associate Dean, Student Welfare.
 - Approve their registration
 - Manage the recommendation/appeal for termination/continuation process in consultation with Head of the Department and Dean, Academics.
- (e) At the time of registration for a semester, the advising process for weak students would involve the following: Student meets his advisor at the beginning of the semester, during the add-drop period, if possible with parents, to
- identify specific problems and ways to mitigate
 - formulate academic plan and target for the semester
 - help Head of the Department in the processing of the student's appeal against termination, if applicable
 - approve the registration of the student online.
- (f) The student being placed under probation for the first time may also meet the counsellor during this period, if needed. The counsellor can provide professional help in identifying to resolving problems. Counsellors' input will be available to the special advisor. During the add-drop period, the student, preferably along with his/her parents, should come and meet the Counsellor.
- (g) While considering any appeal from an academically weak student for continuation of his registration, the Dean, Academics would consider the following:
- (i) whether he/she has met his/her Advisor and Counsellor at the scheduled times on a regular basis and
 - (ii) whether he/she is regular in help sessions.
- Registration of a student under probation will not be approved for the next semester if he/she does not comply with the process of meeting the advisor and counsellor. He/ she will then be required to withdraw from the semester.
- (h) A student on probation will not be permitted to contest for any position of responsibility. However, he/ she will be permitted to participate in extra-curricular activities in a restricted fashion only on specific recommendation of his / her advisor.

An Institute level committee known as the Welfare Committee would monitor the entire operation of academic advising for weak students. Functions of the Welfare committee include Monitoring the Performance of weak students and making the final recommendations regarding termination/ continuation, restarting first year and slow-paced programme requests. This committee would also evaluate the weak students based on the feed-back regarding

- (i) regularity in meeting the advisor and /or counsellor
- (ii) student's attendance in help sessions and
- (iii) academic performance.

A summary of the weak student's performance would be made available to the class committee members, Head of the student's Department as well as Course Coordinators of the courses in which the student is currently registered.

Student Mentors

- (a) Each student will be assigned a Student mentor from the same hostel and preferably from the same discipline. They mentor students on academic and extra-curricular activities and provide feed-back to the advisor and counselor in case of weak students.
- (b) There are individual incentives for good student mentors. Also, hostels performing well on mentoring benefit in terms of points towards BSW trophy.

4.8 Capability Linked Opportunities for Undergraduate Students

A student who clears all the first year credit requirements with CGPA 7.0 and above will be permitted to register for additional credits from third semester onwards. A student will be permitted to register for up to 26 credits per semester provided

- (a) The student has cleared all courses for which the student has registered till then and
- (b) his/ her CGPA is 7 or above

In case a student does not meet this requirement but has cleared $20 \times N$ credits, where N is the total number of semesters spent, then he/she can register up to a maximum of 24 credits.

A student registering for 26 credits in each semester after the end of first year can complete a maximum of 190 credits at the end of 4 years. Similarly, a student registering for 24 credits in each semester after first year can complete a maximum of 178 credits. Since the graduation requirement for 4-year B.Tech programmes varies between 145-155 Earned Credits, it will be feasible for capable students to add value to their degrees by registering for additional courses of their choice.

Students can make use of these additional credits in two blocks of 20 credits to opt for

- (a) Minor/Interdisciplinary Area Specialization
- (b) Departmental Specialization

A student based on his/her performance and interest can choose either one or both. Successful completion of minor area credits and / or departmental Specialization will be indicated on the degree.

When a student opts for a departmental specialization and/or a minor area, he/she can use 10 open category credits (mandatory degree requirement) towards departmental specialization and/or minor area requirements. For example, a student registered for B.Tech (Chemical engg.) and opting for minor area in Computer Science and Engg., can opt for courses prescribed for minor area in Computer Science and Engg., as part of mandatory 10 credits requirements under OC. He/she will need to do additional 10 credits in the minor area to be eligible for Minor area specialization in the degree.

A student may not opt for either of the two but can do additional credits through open choice of courses. In case a student cannot meet requirements of a minor area or departmental Specialization, additional credits earned by the student over and above his/her degree requirement will be used for DGPA calculation and will be indicated on his/her transcript.

A set of pre-defined courses of total 20 credits in a focus area comprises a Departmental Specialization if the courses belong to the parent Department of an undergraduate programme, or a Minor/ Interdisciplinary Area Specialization if the courses belong to a different Department / Centre / School. Additional conditions and details of individual specializations are given in Section 6.

If any course of a Minor / Interdisciplinary area overlaps with any core course (DC or PC category courses) or elective course (DE or PE category courses) of the student's programme, then credits from this course will not count towards the minor area credit requirements, though this course may contribute towards satisfying the requirement of the Minor / Interdisciplinary area. In such a case, the requirement of 20 credits must be completed by taking other courses of the specialization.

4.9 Change of Programme at the End of the First Year (Valid for 2014 entry onwards)

- (a) An undergraduate student is eligible to apply for change of branch at the end of the first year only, provided he/she satisfies the following criteria:-
 - (i) CGPA for General and OBC category students : >8.00

- (ii) CGPA for SC/ST and Person with Disability category students : >7.00
- (iii) Earned credits/non-graded units at the end of the second semester of the first year : All credits of core and non-graded units of the first year
- (iv) Optionally, one first year course would be identified by each programme, in which the grade of the applicant is equal to or above B. A list of such courses identified for various programmes is given in Table 9.
- (v) The student should have no disciplinary action against him/her.
- (b) Change of the branch will be permitted strictly in the order of merit, in each category, as determined by CGPA at the end of first year, subject to the limitation that the actual number of students in the third semester in the branch to which transfer is to be made should not exceed its sanctioned strength by more than 15% and the strength of the branch from which transfer is being sought does not fall below 85% of its sanctioned strength.
- (c) The conditions mentioned in item (a) above will not be insisted upon for change to a branch in which a vacancy exists with reference to the sanctioned strengths, and the concerned student was eligible as per JEE Rank for admission to that branch at the time of entry to IIT Delhi. However, these conditions will continue to apply in case of students seeking change to a branch to which the concerned student was not eligible for admission at the time of entry to IIT Delhi.

Table 9. Criteria for Poor Performance at the end of the second registered semester

S. No.	Programme Code and Name of the Programme to which Change is sought		Specified Course in which a minimum of B grade is required
1	BB1	B.Tech. in Biochemical Engineering and Biotechnology	CYL100/CML100: Introduction to Chemistry
2	BB5	B.Tech. and M.Tech in Biochemical Engineering and Biotechnology	CYL100/CML100: Introduction to Chemistry
3	CH1	B.Tech in Chemical Engineering	MAL101/MTL101: Linear Algebra and Differential Equations
4	CH7	B.Tech. and M.Tech in Chemical Engineering	MAL101/MTL101: Linear Algebra and Differential Equations
5	CE1	B.Tech in Civil Engineering	AML100/APL100: Engineering Mechanics
6	CS1	B.Tech. in Computer Science and Engineering	CSL100/COL100: Introduction to Computer Science
7	CS5	B.Tech. and M.Tech in Computer Science and Engineering	CSL100/COL100: Introduction to Computer Science
8	EE1	B.Tech. in Electrical Engineering	None
	EE3	B.Tech. in Electrical Engineering (Power and Automation)	None
9	MT1	B.Tech. in Mathematics and Computing	MAL100/MTL100: Calculus
10	MT6	B.Tech. and M.Tech. in Mathematics and Computing	MAL100/MTL100: Calculus
11	ME1	B.Tech. in Mechanical Engineering	None
12	ME2	B.Tech. in Production and Industrial Engineering	None
13	PH1	B.Tech. in Engineering Physics	PHL100/PYL100: Electromagnetic Waves and Quantum Mechanics
14	TT1	B.Tech. in Textile Technology	AML100/APL100: Engineering Mechanics

4.10 Self-study course

A self-study course will be from the regular UG courses listed in the Courses of Study bulletin. The main features of a self-study course are as follows:

- (a) A student may be given a self-study course not exceeding 5 credits in the final semester if he/ she is short by a maximum of 5 earned credits required for graduation provided that the course is not running in that semester as a regular course. Students in the Dual-degree. programmes are allowed to avail of this provision during their last semester. However, they would be permitted to take only a UG course as a possible self-study course. A student can make use of this provision only once during the programme.
- (b) A student may also be permitted to do a U.G. core course not exceeding 5 credits in self-study mode at most once during the program, provided he/she has failed in it earlier and the course is not being offered as a regular course during that semester.
- (c) Students should apply for a self-study course with appropriate recommendation of a Course Coordinator and the Head of the Department of the student's programme. The final sanction of a self-study course to a student is made by the Dean, Academics.
- (d) Normally, no formal lectures will be held for a self-study course but laboratory, design and computation exercises will be conducted if they form an integral part of the course.
- (e) The Course Coordinator will hold minor and major tests besides other tests/quizzes for giving his/her assessment at the end of the semester. In summer semester, there will be at least one mid semester test and a major test.
- (f) The self-study course will run during the total duration of the semester (including summer semester).

4.11 Assistantship for Dual-degree Programmes

The students of dual-degree programmes will be considered for award of institute research/ teaching assistantship if they have earned 135 credits. Only those students who have either qualified GATE or have a CGPA more than 8.0 will be eligible for this assistantship. The assistantship will be provided for a maximum period of 14 months beginning from the summer semester following eighth semester, provided the student is registered for M.Tech Major Project in that semester. A student availing assistantship will be required to provide 8 hours of assistance per week besides his/ her normal academic work. For continuation of assistantship a student will need to secure SGPA of 7.0. A student will be eligible to receive assistantship from sources other than institute fund or MHRD if he/she has a CGPA of 7.0 and has earned 135 credits.

A student receiving assistantship will be eligible for total of 30 days leave during the 14-month period. He/she will not be entitled to mid-semester breaks, winter and summer vacations.

4.12 Admission of UG Students to PG Programmes

Undergraduate students of the Institute are eligible for admission to PG programmes at IIT Delhi. For admission to PG programme the minimum CGPA required at the end of sixth semester shall be 7.5. The student will be awarded both the degrees - B.Tech and the PG degree on successful completion of the degree requirements of both the programmes with provision for waiver of a maximum of 10 credits.

4.13 Measures for helping SC/ST Students

A number of measures exist for helping students belonging to SC and ST categories. A senior faculty member is appointed as adviser to SC/ST students for advising them on academic and non-academic matters. Financial measures for helping SC/ST students are described in the Prospectus.

5. POSTGRADUATE DEGREE REQUIREMENTS, REGULATIONS AND PROCEDURES

5.1 Degree requirements

The detailed degree requirements for M.Sc., D.I.I.T., M.B.A., M.Des. M.Tech., M.S. (Research) and Ph.D. degrees are listed in Table 10.

5.2 Continuation requirements

The detailed requirements for continuation as a student in the respective programme for M.Sc., D.I.I.T., M.B.A., M.Des. M.Tech., M.S. (Research) and Ph.D. degrees are listed in Table 10. Failure to maintain the specified academic standing will result in termination of registration and the student's name will be struck-off the rolls.

The maximum permitted duration of each programme will be determined in terms of number of registered regular semesters, hereinafter called registered semesters. Any semester in which a student has registered for a course will be called a registered semester subject to the following:

- (a) Only the 1st and 2nd semesters of an academic year can be registered semesters. The summer semester will not be considered as a registered semester.
- (b) A semester when a student has been granted semester withdrawal or granted leave will not be considered as a registered semester.
- (c) The semester when a student is suspended from the Institute on disciplinary grounds will not be counted towards the number of registered semesters.

The summer semesters falling in between the permitted registered semesters shall be available for earning credits. After the student has registered for the maximum permissible number of registered semesters, the subsequent summer semesters will not be available for earning credits.

5.3 Minimum student registration for a programme

A M.Sc., M.B.A., M.Des. or M.Tech. programme will not be run unless the number of students registered for that programme is six or more. If the number of students left in a programme at the end of the 2nd semester is less than four, the same programme may be looked into for temporary suspension by the Board of Educational Research and Planning.

5.4 Lower and upper limits for credits registered

For full-time students pursuing M.Sc., M.B.A., M.Tech. and M.S.(Research), the minimum registration requirement in a semester is 12 credits, and for part-time students, the minimum registration requirement is 3 credits. These minimum credit requirements are not applicable for graduating students who require lower than the proposed minimum to graduate.

5.5 Audit requirement

- (a) A student can request for an audit grade in any course provided he/she is eligible to earn audit credits, he/she is already registered for that course and it is not a core requirement of the student's programme. The request for auditing a course should be made on or before the last date for audit requests as defined in the semester schedule.
- (b) A JEE entry student is eligible to audit a course provided he /she has earned 100 credits.
- (c) M.Tech./M.S./ Ph.D. students are eligible for auditing a course at any time before completion of the programme.
- (d) A student earns either an NP (audit pass) or an NF (audit fail) grade for an audit course. The audit pass (NP) grade may be awarded if the student satisfies the attendance criteria specified for the course and he/she has obtained at least a 'D' grade. The course coordinator can specify a higher criterion for audit pass at the beginning of the semester. If either of these requirements is not fulfilled, the audit fail (NF) grade is awarded.
- (e) Grades obtained in an audit course are not considered in the calculation of SGPA or CGPA.
- (f) All JEE entry students (B.Tech., Dual-Degree, Integrated M.Tech.) can earn a maximum of 8 credits from elective course as audit, in any category out of total credits required for graduation.
- (g) M.Tech., M.Sc., M.S and Ph.D students can audit a course over and above their core requirements, as specified by the supervisor and SRC.

- (h) A student (UG/PG) is permitted to audit courses over and above their graduation requirement.
- (i) Non-credit core courses or core courses not considered for calculation of SGPA or CGPA for PG programmes like Ph.D., MBA, M.Tech., M.S. should not be referred to as audit courses. These courses should be treated like similar core requirements for UG programmes such as Introduction to Programme/ Introduction to Humanities & Social Sciences. These courses should be numbered with N as the third letter, indicating the fact that these courses will not be considered for CGPA or SGPA calculation but are core requirements for the programmes. For example, HUL810, which is a core requirement for all Ph.D. students, should be numbered HUN810. A student can earn either a S or Z grade in such courses. The grade S indicates successful completion. A student has to earn a S grade in such a course to meet the core requirements of a programme.

5.6 Award of D.I.I.T. to M.Tech./MBA students

If a student after completing the maximum period available for the M.Tech. programme is not able to get the required minimum DGPA of 6.0 with at least 60 valid credits, then he/she can apply for a D.I.I.T. irrespective of whether the department/centre runs a Diploma programme or not. For the award of D.I.I.T., the student must have earned a minimum of 45 valid credits with a minimum CGPA of 5.5. The request for the award of DIIT must be made within 5 years of the date of joining the programme.

In case of M.B.A., DIIT shall be considered if at least 36 credits (9 courses from core and 3 courses from focus module) +4 compulsory audit courses, have been earned with a minimum CGPA of 5.5.

5.7 Part-time students regulations

Normally, part-time M.Tech. and M.S.(Research) students are expected to complete the degree requirements in six semesters. In case of special circumstances, including extension of project work, the student can be allowed to continue beyond six semesters but in any case he/she cannot extend registration beyond ten semesters excluding summer semesters. In case of full-time students converting to part-time registration, the limit of six semesters will continue to apply.

5.8 Leave rules for D.I.I.T., M.Des., M.Tech. and M.S. (Research)

A full-time D.I.I.T., M.Des., M.Tech. or M.S.(Research) student during his/her stay at the Institute will be entitled to leave for 30 days (including leave on medical grounds), per academic year. Even during mid-semester breaks, and summer and winter vacations, he/she will have to explicitly apply for leave. He/she, however, may be permitted to avail of leave only up to 15 days during winter vacation at the end of the first semester.

The leave will be subject to approval of the Head of Department/Centre/Programme/School Coordinator concerned and a proper leave account of each student shall be maintained by the Department/Centre/Programme/School Coordinator concerned.

5.9 Assistantship requirements

A D.I.I.T., M.Des., M.Tech. or M.S.(Research) student irrespective of the source of assistantship, must attend at least 75 % of classes in each course in which he/she is registered. In case his/her attendance falls below 75 % in any course during a month, he/she will not be paid assistantship for that month. Further, if his/her attendance again falls short of 75 % in any course in any subsequent month in that semester, his/her studentship and assistantship will be terminated. For the above purpose, if 75 % works out to be a number which is not a whole number, the immediate lower whole number will be treated as the required 75 % attendance.

All students who are offered assistantship are required to register for a special course with Satisfactory/Unsatisfactory grade. The students are expected to put in 8 hours per week towards the work assigned by the Institute. Continuation of assistantship in a subsequent semester would be conditional to obtaining a satisfactory grade in this course and a SGPA of 7.0 or more (relaxed to 6.75 for SC/ST and PH students registered in M.Des., M.Tech. and M.S. (Research) programmes) in other courses registered in the same semester.

5.10 Summer registration

Summer semester registration for PG students is admissible. M.Tech./ M.S.(R)/ M. Des. students will be allowed to register for maximum of one course (upto 4 credits) and M.B.A./M.Sc. students upto 2 courses in the summer if and only if that is the only requirement for completion of the degree and is recommended by DRC/CRC. For projects, in case X or I grade is awarded in the second semester, the student would be expected to register during summer for completion of the project. Normally regular courses would not be offered during summer semester.

Courses can, however, be offered by departments/centres/Schools for taking care of special situations subject to the availability and consent of faculty.

5.11 Master of Science (Research) regulations

The MS. (Research) programme will be comprised of 20 credits of the course work and 40 credits of the research work. The 20 credits of course work should not include any component of minor project.

In the first semester the student has to register for a minimum of 15 and a maximum of 22 credits (including research credits). A maximum of 6 research credits can be opted for in the first semester.

In the first semester, the part-time students can only register for course work with minimum and maximum limits of 6 and 12 credits, respectively. In the second semester the registration for the thesis work (with an upper limit of 3 credits) can be initiated along with the course work. After the completion of the course work, a maximum of 12 research credit can be registered for in any semester. The course work must be completed by the end of third semester; otherwise the registration of the student will stand cancelled.

The larger project component gives the student an opportunity to conduct in-depth investigation on a topic of his/her interest. The project will be monitored by the Student Research Committee (SRC) and the students will have to register for thesis (project course no. xxD895, 'xx' is department/school code) for 40 credits. An 'X' grade is awarded at the end of each semester until the project work gets completed and the thesis is written. Nominally the M.S.(R) programme is expected to take 4 semesters (excluding summer). Upon completion of project work, a thesis is written that is evaluated by one internal and one external examiner. Upon satisfactory recommendations from the examiners, the thesis defence can be conducted before a committee. Conversion to Ph.D. is also possible. For further details, see "Rules and Regulations for Master of Science (Research) Programme".

5.12 Migration from one PG programme to another PG programme of the institute

Provision exists for the PG students of the institute to move from (i) M.Tech/M.S. (R) to Ph.d., (ii) M.Tech. to M.S.(R), and (iii) M.S.(R) to M.Tech. as per details given in the table below:

	M.Tech./M.S.(R) to Ph.D.	M.Tech. to M.S.(R)	M.S.(R) to M.Tech.
Timing	> 1st Sem.	> 1st Sem. & < 3rd Sem.	> 1st Sem. & < 3rd Sem.
Eligibility	≥ 8.0 SGPA/CGPA & ≥ 12 credits	≥ 12 credits	≥ 12 credits
Admission	DRC/CRC (Evaluation)	DRC/CRC (Evaluation)	DRC/CRC (Evaluation)
Credits	Credits transfer as recommended by DRC/CRC	Credits transfer as recommended by DRC/CRC	Credits transfer as recommended by DRC/CRC
Duration	Max. 7 years from date of joining M.Tech./M.S.(R)	Max. 5 years from date of joining M.Tech.	Max. 5 years from date of joining M.S.(R)

Full-time M.S.(R) students joining the Ph.D. programme within two years of completion of their M.S.(R) degree will be granted waiver of residency period. Further, the course work requirements can be made up by either additional credits (6 credits as per present norms) taken during this M.S.(R) period (over and above their minimum degree requirements), or in the summer semester (first or second) by identifying relevant courses. This credits transfer has to be recommended by the respective DRC/CRC.

5.13 Doctor of Philosophy (Ph.D.) regulations

The award of Ph.D. degree is in recognition of high achievements, independent research and application of scientific knowledge to the solution of technical and scientific problems. Creative and productive enquiry is the basic concept underlying the research work. In order to overcome any deficiency in the breadth of fundamental training or proper foundation for advanced work, special preliminary or pre-Ph.D. courses are given by each department/centre/School. These courses are given either by faculty members or by guest-speakers and specialists in the field of research.

5.13.1 Course requirements

Candidates admitted to non-engineering departments and having a B.Tech./M.Sc./M.A. or equivalent degree are required to complete a minimum of 12 credits. Relaxation up to 6 credits in the course work can be considered for those with M.Phil. degree. The requirement of pre-Ph.D. Course Credits/work for Ph.D. student having B.Tech. and M.Sc. Degree (entering Engineering Departments only) will be 20 credits.

Table 10. Continuation of Registration and Graduation Requirements for Postgraduate Programmes

Degree	Registration limits (Per semester)	Criteria for continuation of registration	Graduation requirements		
			Valid Credits (\$)	Minimum DGPA	Max. Period of stay
D.I.I.T. (Naval Construction)	Minimum 12 credits Maximum 20 credits	CGPA > 5.0 at the end of each semester.	49	6.0	6 sem. #
M.Sc., Chemistry	Minimum 20 credits Maximum 28 credits	(i) The minimum acceptable performance level in any registered semester is SGPA of 5.0. However, at the end of the 1st registered semester, a student with SGPA of 4.0 or more will be permitted to continue. If the SGPA is less than 4.0 then registration will be terminated. (ii) If at the end of any registered semester, the SGPA is less than 5.0 then the student will be issued a warning letter and placed on probation; a copy of the warning letter will be sent to the parents. The Chairperson DRC/CRC shall assess the feasibility of completing degree requirements and identify remedial measures for problems leading to poor performance. (iii) If a student is on probation and his/her academic performance is below the minimum acceptable level in the following registered semester then his/her registration will be terminated. (iv) The registration of any student will be limited to 1.25 times the average earned credits of the previous two registered semesters, subject to a minimum of 15 credits and a maximum of 26 credits.	75-81	5.0	6 sem.
M.Sc., Mathematics					
M.Sc., Physics					
M.Tech., full time	Minimum 20 credits Maximum 28 credits condition that no. of lecture courses to be not more than 6.	(i) The minimum acceptable performance level in any registered semester is SGPA of 6.0. However, at the end of the 1st registered semester, a student with SGPA of 5.0 or more will be permitted to continue. If the SGPA is less than 5.0 then registration will be terminated. (ii) If at the end of any registered semester the SGPA is less than 6.0, then the student will be issued a warning letter and placed on probation; a copy of the warning letter will be sent to Chairperson DRC/CRC. The Chairperson DRC/CRC shall assess the feasibility of completing degree requirements and identify remedial measures for problems leading to poor performance. (iii) If a student is on probation and his/her academic performance is below the minimum acceptable level in the following registered semester then his/her registration will be terminated. (iv) The registration of any student shall be limited to 1.25 times the average earned credits of the previous two registered semesters, subject to a minimum of 12 credits and a maximum of 22 credits for full time students.	48-54 credits	6.0	6 sem.
M.Tech., part time	Minimum one course and/or Minor/ Major Project. Maximum 12 credits with the condition that no. of lecture courses to be not more than 3.				10 sem. @
M. Des.	Minimum 20 credits Maximum 28 credits		54	6.0	6 sem.
M.B.A., full time	Same as M.Tech. full time		72 (+ 6 compulsory audit courses.)	6.0	6 sem.
M.B.A., part time	Same as M.Tech. part time				10 sem.

M.S. (Res.) Full Time	See note ++	<p>(i) The minimum acceptable performance level in any registered semester is SGPA of 7.0 or more. However, at the end of the 1st registered semester, a student with SGPA of 6.0 or more will be permitted to continue. If the SGPA is less than 6.0 then registration will be terminated.</p> <p>(ii) If at the end of any registered semester, the SGPA is less than 7.0, then the student should be issued a warning letter and placed on probation; a copy of the warning letter should be sent to the Chairperson DRC/CRC. The Chairperson DRC/CRC shall assess the feasibility of completing degree requirements and identify remedial measures for problems leading to poor performance.</p> <p>(iii) If a student is on probation and his/her academic performance is below the minimum acceptable level in the following registered semester then his/her registration will be terminated.</p> <p>(iv) During the research work period, each unsatisfactory performance grade would entail a warning and two consecutive warnings would result in termination of registration.</p>	60 including Thesis.	7.0	6 sem.
M.S. (Res.) Part Time	See note ++				10 sem. +++
Ph.D.	For details please refer to Ph.D. Ordinances and Regulations	<p>(i) A student will be evaluated on completion of pre-Ph.D. course work in terms of Degree Grade Point Average (DGPA) which is calculated on the basis of the best valid credits as prescribed by the Department/Centre. The requirement for completion of pre-Ph.D. course work is DGPA of 7.5 or more.</p> <p>(ii) In case his/her DGPA is less than 7.00, his/her registration will be terminated. If DGPA is in between 7.00 and 7.5, he/she will be allowed to register for more courses to improve his/her DGPA until the maximum permissible period i.e 18 and 24 months respectively for full-time and part time students.</p> <p>(iii) Registration of a Ph.D. student will be terminated at the end of 1st Semester</p>	12 for B.Tech./M.Sc., 6 for M.Tech. or equivalent; A Deptt./Centre/School may prescribe additional credits.	DGPA 7.5 in the Course work + Thesis	14 sem.

NOTE:

- \$ Detailed break-up of core, elective and open category courses are given in the latter pages of this booklet.
- £ If a student at the end of the M.Tech. programme fails to complete required valid credits with a CGPA of 6.00 or above, he/she still can get a DIIT even though the Department/Interdisciplinary Programme does not have a regular Diploma programme provided: (i) he/she has a minimum of 45 valid credits; and (ii) he/she has secured a minimum CGPA of 5.50. The request for the award of D.I.I.T. must be made within 5 years of the date of joining the programme.
- + In the first semester the student has to register for a minimum of 15 and a maximum of 20 credits of course work only. In the subsequent 3-semesters the student shall complete the research work and the course work remaining, if any.
- ++ In the first two semesters the part-time student shall register only for the course work with the minimum and maximum limits of 6-12 credits. The research work and the remaining course work, if any, shall be completed in the remaining 4 semesters. However, the course work must be completed within the first 4-semesters of registration.
- +++ The 10 Semester rule for part-time M.S. (Research) students will be applicable only to those who have joined initially as part-time students. For students converting from full-time to part-time the maximum stay limit of 6 semesters will be applicable, subject to recommendations of DRC/CRC and approval by Dean, Academics.
- @ The 10 Semester rule for part-time M.Tech. students will be applicable only to those who have joined initially as part-time students. For students converting from full-time to part-time, the maximum stay limit of 6 semester will be applicable.
- # The summer semester will not be considered as a registered semester.

M.Tech. or equivalent degree holders are required to complete a minimum of 6 credits. The departments/centres/Schools may stipulate a larger number of credits in general or in specific cases. The course requirement will be determined by the Department/Centre/School Research Committee (DRC/CRC/SRC) on the recommendations of the supervisor after due consideration of the background of the student in relation to the proposed topic of research. These courses can be prescribed from existing M.Tech. courses and/or from special pre-Ph.D. courses including laboratory, seminar, foreign language, etc. Normally, no independent study course will be allowed for Ph.D. students.

Further, in case the Ph.D. student having completed 20 credits is unable to complete the research at the Ph.D. level for any reason whatsoever, he/she may be allowed to complete M.S. (Research) degree requirement as per Institute rules.

Full-time M.Tech. and M.S.(R) students of IIT Delhi interested in joining the Ph.D. programme within two years of completion of their M.Tech./M.S.(R) will be granted waiver of residency period. The course work requirements be made up by either additional credits (6 credits as per present norms) taken during their M.Tech./M.S.(R) period (over and above their minimum Degree requirements) or in the summer semester (first or second) by identifying courses. In all cases, such credit transfer be recommended by the concerned DRC/CRC/SRC as relevant to their respective Ph.D. programmes.

The conditions of completion of course work and of continuation during the course work are given in the Table 10.

A student shall be formally registered/admitted to the candidacy of Ph. D. degree only after he/she has cleared the comprehensive examination. Students would be permitted to take the comprehensive examination only after they have submitted a research plan and have completed the course work (including compulsory audit course - HUL 810: Communication Skills). Full-time and part-time students must clear the comprehensive examination within a period of 18 months and 24 months, respectively, from the date of joining. A maximum of two chances will be given to any student to clear the comprehensive examination. Every student, after having completed the comprehensive examination must formally register for the candidacy on a form obtainable from the PG Section.

Table 11. Time limits for students registered under Ph.D. Programme

S. No.		Candidate's qualification	
		M.Tech. or equivalent	B.Tech./M.Sc. or equivalent
1	The limits for registration		
1.1	Minimum period of registration	2 years	3 years (can be reduced to 2 years with the approval of Senate)
1.2	Normal maximum period of registration	5 years	5 years
1.3	Extended maximum period of registration	7 years	7 years
2	Conversion from Full-time to Part-time registration		
2.1	Employment outside the Institute minimum period	3 years, with approval of Dean Academic	3 years, with approval of Dean Academic
2.2	Employment in a sponsored project in IIT Delhi	One year or Completion of course work and comprehensive, whichever is later	Two years or Completion of course work and comprehensive, whichever is later

5.13.2 Time limit

In addition to the information in Table 10, the time limits shown in Table 11 apply for Ph.D. work.

5.13.3 Leave regulations

(a) Leave during course work

A full-time Ph.D. student, during his/her stay at the Institute will be entitled to leave for 30 days, including leave on medical grounds, per academic year. Even during mid-semester breaks, and summer and winter vacations, he/she will have to explicitly apply for leave. He/she, however, may be permitted to avail of leave only up to 15 days during winter vacation at the end of the first semester.

Leave beyond 30 days in an academic year may be granted to a research scholar in exceptional cases subject to the following conditions:

- (i) the leave beyond 30 days will be without Assistantship/Scholarship, and
- (ii) such an extension of up to additional 30 days will be granted only once during the programme of the scholar.

In addition, a Ph.D. student who has completed his/her course work may be granted leave on medical grounds up to 10 days per academic year.

Women research scholars will be eligible for Maternity Leave with assistantship for a period not exceeding 135 days once during the tenure of their award.

The leave may be subject to the approval of the Head of Department/Centre/School/Programme Coordinator concerned on the recommendation of the Supervisor; and a proper leave account of each scholar shall be maintained by the Department/Centre/School/Programme Coordinator concerned.

5.14.4 Attendance requirements for assistantship

A Ph.D. student irrespective of the source of research assistantship while pursuing course work, must attend at least 75 % of classes in each course in which he/she is registered. In case his/her attendance falls below 75 % in any course during a month, he/she will not be paid Assistantship for that month. Further, if his/her attendance again falls short of 75 % in any course in any subsequent month in that semester, his/her studentship and Assistantship will be terminated. A research scholar after having completed the course work must attend to his/her research work on all the working days and mark attendance except when he/she is on duly sanctioned leave. The requirement of 75 % attendance will apply as above, on daily attendance except in the cases where longer leave has been duly sanctioned within the leave entitlement of the student. For the above purpose, if 75 % works out to be a number which is not a whole number, the immediate lower whole number will be treated as the required 75 % attendance.

All scholars who are offered assistantship are required to register for a special course with Satisfactory/Unsatisfactory grade. They are expected to put in 8 hours per week towards the work assigned by the Institute. Continuation of assistantship in the subsequent semester would be conditional to obtaining a satisfactory grade in this course.

5.15.5 Further regulations governing Ph.D. students

The Ph.D. degree of the Institute may be conferred on a candidate who fulfills all the requirements detailed in the Ordinances and other rules, approved by the Senate. Some of the important regulations are given below:

1. Applications for Ph.D. registration, i.e., for entry to a course of study and research leading to Ph.D. degree must be made to the BAP on the approved form. The date of registration is normally the date of joining the programme. However, in exceptional cases the date of registration may be preponed by a maximum of 6 months by the BAP if it is convinced that the candidate has spent adequate amount of time on research earlier.
2. The academic programme of all the Ph.D. candidates in a department/centre will be coordinated by the DRC/CRC/SRC appointed by the BAP.
3. The supervisor shall be a full-time member of the academic staff of the Institute. The supervisor(s) shall be appointed within three months of joining the programme. If necessary, the Board of Academic Programme on the recommendations of the Supervisor through the DRC/CRC, may appoint Joint Supervisor(s) not exceeding two from inside or outside the Institute. Normally, there should not be more than two supervisors for a candidate from within the Institute. Appointment of any Joint Supervisor would not be permitted after a lapse of eighteen months from the date of registration of the candidate, except in case when none of the supervisors is in the Institute for a year or more at a stretch.
4. The DRC/CRC/SRC shall meet from time to time and review the progress of each candidate in the course work, as well as research, by any means, including oral examination of the candidate, if necessary, and recommend, after due consultation with the supervisor(s), such steps to the candidate as are necessary to improve his/her performance.
5. The progress of each candidate will be monitored by the DRC/CRC/SRC. For this purpose the following procedures will be followed:
 - (a) Ph.D. research work will be compulsorily given a course number, DTD 899 (Doctoral Thesis) for all candidates across the Institute.
 - (b) The DRC/CRC/SRC Secretary/Ph.D. Coordinator will be Coordinating collection of progress reports written and signed by the scholars and forwarded by the supervisors every semester.
 - (c) The supervisor(s)/SRC/DRC/CRC will evaluate the progress of the student every semester.
 - (d) X' grade will be awarded if the progress is 'satisfactory' in that semester.

- (e) If the progress is 'unsatisfactory', 'U' grade will be awarded. For the first appearance of 'U' grade, a warning would be issued to the candidate by Dean, Academics. If his/her performance does not improve after warning, the assistantship may be withheld.
- f) If there are two consecutive 'U's, the registration will stand terminated.
- (g) Submission of progress report should continue till submission of thesis.
- (h) Like all other courses, the grades for DTD 899 will be discussed in the Department/Centre/School as per semester schedule.

The above process will continue till the thesis is submitted.

6. The candidate may submit the thesis at any time provided that :
 - (a) He/she has completed the minimum period of registration including any extension prescribed by the Board of Academic Programmes (BAP).
 - (b) He/she has completed the course work requirement as prescribed by the DRC/CRC with DGPA not below 7.50 and has also cleared the comprehensive examination.
 - (c) He/she has submitted at least two months in advance, the title and a synopsis of the thesis. The Synopsis along with the list of examiners suggested by the supervisor needs to be approved by the DRC/CRC/SRC and then forwarded to Dean, Academics.
7. The thesis shall normally be written in English in the specific format and shall contain a critical account of the candidate's research. It should be characterized by discovery of facts, of fresh approach towards interpretation of facts and theories or significant contribution to knowledge of design or development, or a combination of them. It should bear evidence of the candidate's capacity for analysis and judgement and also his/her ability to carry out independent investigation, design or development. A thesis should normally be supplemented by published work. No part of the thesis or supplementary published work, shall have been submitted for the award of any other degree/Diploma. Normally, three copies of thesis in soft cover have to be submitted in the format prescribed by the Institute. In case of joint supervision, four copies of the thesis are required to be submitted.
8. On receipt of the title and synopsis of a thesis, the Dean, Academics will appoint a Board of Examiners for each candidate. The Board will consist of one (or two) internal examiner(s), normally the supervisor(s), and two external examiners, one from within India and one from abroad who shall be expert in the subject of thesis. These external examiners shall be chosen from a list of eight, to be recommended by the supervisor(s) through the DRC/CRC/SRC while forwarding the title and synopsis of the thesis. The candidate will be required to submit a fresh synopsis if more than 9 months elapse from the synopsis submission date to the thesis submission date.
9. Each Examiner will submit a detailed assessment report recommending to the BAP, one of the following courses of action:
 - (a) that the thesis be deemed satisfactory and that the candidate may defend his/her thesis orally before a committee constituted for the purpose and any members of the faculty and research students who wish to be present.
 - (b) that the candidate may submit a revised thesis before the expiry of a specific period. In the normal circumstances, he/she may submit the revised thesis within a period of one year from the date of communication in this regard from the Dean, Academics. However, in exceptional circumstances, this period may be extended by the BAP by another one year : the total revision time irrespective of the number of revisions allowed will not exceed a period of two years.
 - (c) that the thesis be rejected outright.

In the event of disagreement between the external examiners, the BAP may, as a special case, appoint another external examiner, if the merit of the case so demands. The examiner will report independently to the BAP.

10. The oral defence of the thesis shall be conducted by a committee consisting of the internal examiner(s) and one external examiner. If none of the external examiners, is available for the conduct of the oral defence, an alternative external examiner shall be appointed by the BAP for this purpose only.
11. On the completion of all stages of the examination, the Oral Defence Committee shall recommend to the BAP one of the following courses of action:

- (a) that the degree be awarded.
- (b) that the candidate should be examined on a further occasion in a manner they shall prescribe.
- (c) that the degree shall not be awarded.

In case (a), the Oral Defence Committee shall also provide to the candidate a list of all corrections and modifications, if any, suggested by the examiners.

12. The degree shall be awarded by the Senate, provided that:

- (a) the Oral Defence Committee, through the BAP so recommends.
- (b) the candidate produces a 'no dues certificate' from all concerned in the prescribed form and gets it forwarded along with the report of the Oral Defence Committee; and
- (c) the candidate has submitted two hard cover copies of the thesis, from amongst the same ones submitted by him earlier, after incorporating all necessary corrections and modifications including appropriate IPR notice. The hard bound copies of the Ph. D. thesis, submitted after the viva-voce examination, must contain the appropriate copyright certificate in the beginning of the thesis, on a separate page on the left side. One of these copies is for the Department/Centre's Library and the other is for the Central Library. A softcopy of the thesis has been submitted to the Central Library.

13. The relevant IPR notice to be incorporated in the soft/hard bound thesis, reports etc. shall be chosen from the following:

- a) the thesis/report etc. for which formal copyright application has NOT been filed should carry the copyright notice as:
© Indian Institute of Technology Delhi (IITD), New Delhi , 200 ...[the year of submission of the thesis/report].
- b) and for which formal copyright application has been filed with the copyright office. Should carry the copyright notice as:
© Indian Institute of Technology Delhi (IITD), New Delhi , 200 ...[the year of submission of the thesis/report]. All right reserved. Copyright Registration Pending.
- c) and for which, in-addition to a formal copyright application with the Copyright Office, patent/design application has also been filed with the patent office, should carry the "IPR Notice" as:

Intellectual Property Right (IPRs) notice

Part of this thesis may be protected by one or more of Indian Copyright Registrations (Pending) and/or Indian Patent/ Design (Pending) by Dean, Industrial Research & Development (IRD) Unit Indian Institute of Technology Delhi (IITD) New Delhi-110016, India. IITD restricts the use, in any form, of the information, in part or full, contained in this thesis ONLY on written permission of the Competent Authority: Dean, IRD, IIT Delhi OR MD, FITT, IIT Delhi.

The notices at 'b' and 'c' should ONLY be, repeat ONLY be inserted after the formal application(s) has (have) been filed with the appropriate office(s) as the case may be and the same has been confirmed by FITT office.

- 14. If a member of the academic staff, who is registered for the degree, leaves the Institute before the minimum period of registration is completed, he/she will be permitted to submit his thesis in due course, provided that:
 - (a) a substantial part of the research has been completed at the Institute; and
 - (b) any additional work required can be adequately supervised.
- 15. A member of the academic staff who has commenced his research before joining the Institute may, at the discretion of the BAP and on the recommendation of the Supervisor through the DRC/CRC/SRC concerned, be permitted to include in his period of registration, part or all of the time spent on research before joining the Institute, up to a maximum of one year.
- 16. A member of the non-academic staff of the Institute who satisfies eligibility qualifications may be considered for admission to the degree as a part-time candidate provided his/her application is duly approved by the Director of the Institute.

Dual Degree Programme : Bachelor of Technology and Master of Technology in Biochemical Engineering and Biotechnology

Department of Biochemical Engineering and Biotechnology

The overall Credit Structure

Course Category	Credits
B.Tech Part	
Institute Core Courses	
Basic Sciences (BS)	22
Engineering Arts and Science (EAS)	18
Humanities and Social Sciences (HuSS)	15
Programme-linked Courses	11
Departmental Courses	
Departmental Core	66*
Departmental Electives	10
Open Category Courses	10
Total B.Tech Credit Requirement	152*
Non Graded Units	15
M.Tech Part	
Programme Core Courses	32
Programme Elective Courses	16
Total M.Tech Credit Requirement	48
Grand Total Credit Requirement	200

*Those students who join the dual degree program from JEE or those who choose to pursue a M.Tech degree along with their B.Tech program, will not be required to do the 3-credit B.Tech Project as part of the Departmental core requirement.

Institute Core: Basic Sciences

CML100	General Chemistry	3	0	0	3
CMP100	Chemistry Laboratory	0	0	4	2
MTL100	Calculus	3	1	0	4
MTL101	Linear Algebra and Differential Equations	3	1	0	4
PYL100	Electromagnetic Waves and Quantum Mechanics	3	0	0	3
PYP100	Physics Laboratory	0	0	4	2
SBL100	Introductory Biology for Engineers	3	0	2	4
Total Credits					22

Institute Core: Engineering Arts and Sciences

APL100	Engineering Mechanics	3	1	0	4
COL100	Introduction to Computer Science	3	0	2	4
CVL100	Environmental Science	2	0	0	2
ELL100	Introduction to Electrical Engineering	3	0	2	4
MCP100	Engineering Visualization	0	0	4	2
MCP101	Product Realization through Manufacturing	0	0	4	2
Total Credits					18

Programme-Linked Basic / Engineering Arts / Sciences Core

APL102	Introduction to Materials Science and Engineering	3	0	2	4
CLL110	Transport Phenomena	3	1	0	4
MTL102	Differential Equations	3	0	0	3
Total Credits					11

Humanities and Social Sciences

Courses from Humanities, Social Sciences and Management offered under this category	15
---	-----------

Departmental Core

BBL131	Principles of Biochemistry	3	0	3	4.5
BBL132	General Microbiology	3	0	3	4.5
BBL133	Mass and Energy Balances in Biochemical Engineering	3	0	0	3

Dual Degree Programme: Bachelor of Technology and Master of Technology in Computer Science and Engineering

Department of Computer Science and Engineering

The overall Credit Structure

Course Category	Credits
Institute Core Courses	
Basic Sciences (BS)	22
Engineering Arts and Science (EAS)	18
Humanities and Social Sciences (HuSS)	15
Programme-linked Courses	14
Departmental Courses	
Departmental Core	49
Departmental Electives	11
Open Category Courses	10
Total B.Tech Credit Requirement	139
Non Graded Units	15
M. Tech Part	
Programme Core Courses	32
Programme Elective Courses	14
Total M.Tech Credit Requirement	46
Grand Total Credit Requirement	185

Institute Core: Basic Sciences

CML100	General Chemistry	3	0	0	3
CMP100	Chemistry Laboratory	0	0	4	2
MTL100	Calculus	3	1	0	4
MTL101	Linear Algebra and Differential Equations	3	1	0	4
PYL100	Electromagnetic Waves and Quantum Mechanics	3	0	0	3
PYP100	Physics Laboratory	0	0	4	2
SBL100	Introductory Biology for Engineers	3	0	2	4
Total Credits		22			

Institute Core: Engineering Arts and Sciences

APL100	Engineering Mechanics	3	1	0	4
COL100	Introduction to Computer Science	3	0	2	4
CVL100	Environmental Science	2	0	0	2
ELL100	Introduction to Electrical Engineering	3	0	2	4
MCP100	Engineering Visualization	0	0	4	2
MCP101	Product Realization through Manufacturing	0	0	4	2
Total Credits		18			

Programme-Linked Basic / Engineering Arts / Sciences Core

ELL205	Signals and Systems	3	1	0	4
MTL103	Optimization Methods and Applications	3	0	0	3
MTL104	Linear Algebra and Applications	3	0	0	3
MTL105	Algebra	3	0	0	3
MTL106	Probability and Stochastic Processes	3	1	0	4
PYL102	Principles of Electronic Materials	3	0	0	3
PYL103	Physics of Nanomaterials	3	0	0	3
Total Credits		14			

Humanities and Social Sciences

Courses from Humanities, Social Sciences and Management offered under this category	15
---	-----------

Departmental Core

COL106	Data Structures and Algorithms	3	0	4	5
COL202	Discrete Mathematical Structures	3	1	0	4
COL215	Digital Logic and System Design	3	0	4	5
COL216	Computer Architecture	3	0	2	4
COL226	Programming Languages	3	0	4	5
COP290	Design Practices	0	0	6	3
COL331	Operating Systems	3	0	4	5
COL333	Principles of Artificial Intelligence*	3	0	2	4
COL334	Computer Networks	3	0	2	4
COL351	Analysis and Design of Algorithms	3	1	0	4
COL352	Introduction to Automata and Theory of Computation	3	0	0	3
COL380	Introduction to Parallel and Distributed Programming	2	0	2	3
Total Credits		49			

Departmental Electives

COD300	DESIGN PROJECT	0	0	4	2
COD310	Mini Project	0	0	6	3

COL341	Machine Learning	3	0	2	4

Institute Core : Basic Sciences

CML100	General Chemistry	3	0	0	3
CMP100	Chemistry Laboratory	0	0	4	2
MTL100	Calculus	3	1	0	4
MTL101	Linear Algebra and Differential Equations	3	1	0	4
PYL100	Electromagnetic Waves and Quantum Mechanics	3	0	0	3
PYP100	Physics Laboratory	0	0	4	2
SBL100	Introductory Biology for Engineers	3	0	2	4
Total Credits		22			

Institute Core: Engineering Arts and Sciences

APL100	Engineering Mechanics	3	1	0	4
COL100	Introduction to Computer Science	3	0	2	4
CVL100	Environmental Science	2	0	0	2
ELL100	Introduction to Electrical Engineering	3	0	2	4
MCP100	Introduction to Engineering Visualization	0	0	4	2
MCP101	Product Realization through Manufacturing	0	0	4	2
Total Credits		18			

Programme-Linked Basic / Engineering Arts / Sciences Core

APL102	Introduction to Materials Science and Engineering	3	0	2	4
MTL107	Numerical Methods and Computations	3	0	0	3
MTL108	Introduction to Statistics	3	1	0	4
Total Credits		11			

Humanities and Social Sciences

Courses from Humanities, Social Sciences and Management offered under this category	15
---	-----------

Departmental Core

APL 104	Solid Mechanics	3	1	0	4
MCL111	Kinematics and Dynamics of Machines	3	0	2	4
MCL132	Metal Forming and Press Tools	3	0	0	3
MCL133	Near Net Shape Manufacturing	3	0	0	3
MCL134	Metrology and Quality Assurance	3	0	1	3.5
MCL135	Welding and Allied Processes	3	0	0	3
MCL136	Material Removal Processes	3	0	0	3
MCL141	Thermal Science for Manufacturing	3	1	0	4
MCL201	Mechanical Engineering Drawing	2	0	3	3.5
MCL211	Design of Machines	3	0	2	4
MCL212	Control Theory and Applications	3	0	2	4
MCP232	Production Engineering Laboratory-I	0	0	2	1
MCL261	Introduction to Operations Research	3	0	0	3
MCP261	Industrial Engineering Laboratory-I	0	0	2	1
MCL262	Stochastic Modelling and Simulation	3	0	0	3
MCL311	CAD and Finite Element Analysis	3	0	2	4
MCL331	Micro and Nano Manufacturing	3	0	0	3
MCP332	Production Engineering Laboratory-II	0	0	2	1
MCL361	Manufacturing System Design	3	0	0	3
MCP361	Industrial Engineering Laboratory-II	0	0	2	1
MCD411	B.Tech.Project	0	0	8	4
MCL431	CAM and Automation	2	0	2	3
Total Credits		66			

Departmental Electives

MCL314	Acoustics and Noise Control	3	0	2	4
MCL315	Nanomechanics	2	1	0	3
MCL321	Automotive Systems	3	0	2	4
MCL322	Power Train Design	3	0	0	3
MCL330	Special Topics Production Engg	3	0	0	3
MCL334	Industrial Automation	3	0	2	4
MCL336	Advances in Welding	3	0	2	4
MCL337	Advanced Machining Processes	3	0	0	3
MCL338	Mechatronic Applications in Manufacturing	3	0	2	4
MCL341	Gas Dynamics and Propulsion	3	0	2	4
MCL343	Introduction to Combustion	3	0	0	3
MCL344	Refrigeration and Air-conditioning	3	0	2	4
MCL345	Reciprocating Internal Combustion Engines	3	0	2	4
MCL347	Intermediate Heat Transfer	3	0	0	3
MCL348	Thermal Management of Electronics	3	0	0	3
MCL350	Mechanical Engineering Product Synthesis	1	0	2	2
MCL363	Investment Planning	3	0	0	3
MCL364	Value Engineering	3	0	2	4
MCL366	OR Methods in Policy Governance	3	0	0	3
MCL368	Quality and Reliability Engineering	3	0	0	3
MCL370	Special Topics in Industrial Engg	3	0	0	3
MCL380	Special Topics in Mechanical Engineering	3	0	0	3
MCV390	Special module in Mechanical Engineering	1	0	0	1
MCD412	B.Tech.Project II	0	0	14	7
MCL421	Automotive Structural Design	2	0	2	3
MCL422	Design of Brake Systems	2	0	2	3
MCL441	Modelling and Experiments in Heat Transfer	2	0	4	4
MCL442	ThermoFluid Analysis of Biosystems	3	0	0	3
MCL443	Electrochemical Energy Systems	3	0	0	3

PG Courses

MCL721	Automotive Prime Movers	3	0	0	3
MCL722	Mechanical Design of Prime Mover Elements	3	0	0	3
MCL723	Vehicle Dynamics	3	0	0	3
MCL724	Biomechanics of Trauma in Automotive Design	3	0	0	3
MCL725	Design Electronic Assist Systems in Automobiles	3	0	0	3
MCL726	Design of Steering Systems	3	0	0	3
MCL747	Design of Precision Machines	2	0	2	3
MCL749	Mechatronics Product Design	3	0	2	4
MCL750	Product Design and Manufacturing	1	0	4	3
MCL753	Manufacturing Informatics	3	0	2	4
MCL755	Service System Design	3	0	0	3
MCL756	Supply Chain Management	3	0	0	3
MCL759	Entrepreneurship	3	0	0	3
MCL760	Project Management	3	0	0	3
MCL776	Advances in Metal Forming	3	0	0	3
MCL777	Machine Tool Design	3	0	2	4
MCL788	Surface Engineering	3	0	2	4

Semester	Course-1	Course-2	Course-3	Course-4	Course-5	Course-6	Course-7	Course-8	Course-9	L	T	P	Credits	Non-Graded Units	Contact Hours
I	ELL100 Introduction to Electrical Engineering	MCP100 Introduction to Engineering Visualization	PVL100 Electromagnetic Waves and Quantum Mechanics	MTL100 Calculus	PYP100 Physics Laboratory	MCP101 Product Realization through Manufacturing	NIN100 Introduction to Engineering (Non-graded)	NEN100 Professional Ethics and Social Responsibility-1 (Non-graded)	NLN100 Language and Writing Skills-1 (Non-Graded)

7. CAPABILITY-LINKED OPTIONS

Minor Areas, Interdisciplinary and Departmental Specializations

As described in Section 4.8, students with CGPA higher than 7.0 and / or earned credits higher than 20 per semester are eligible to register for additional credits towards the following Capability-linked options. They can make use of these additional credits in two blocks of 20 credits to opt for

- (a) Minor/Interdisciplinary Area Specialization
- (b) Departmental Specialization

A student based on his/her performance and interest can choose either one or both. Successful completion of minor area credits and / or Interdisciplinary / Departmental Specialization will be indicated on the degree.

When a student opts for such a specialization and/or a minor area, he/she can use 10 open category (OC) credits (mandatory degree requirement) towards the specialization and/or minor area requirements. For example, a student registered for B.Tech (Chemical engg.) and opting for minor area in Computer Science, can opt for courses prescribed for the minor area, as part of mandatory 10 credits requirements under OC. He/she will need to do additional 10 credits for completing the Minor area requirements.

A set of pre-defined courses of total 20 credits in a focus area comprises a Departmental Specialization if the courses belong to the parent Department of an undergraduate programme, or a Minor/ Interdisciplinary Area Specialization if the courses belong to a different Department / Centre / School. Additional conditions and details are given in this section.

If any course of a Minor / Interdisciplinary area overlaps with any core course (DC or PC category courses) or elective course (DE or PE category courses) of the student's programme, then credits from this course will not count towards the minor area credit requirements, though this course may contribute towards satisfying the requirement of the Minor / Interdisciplinary area. In such a case, the requirement of 20 credits must be completed by taking other courses of the Minor Area or Departmental / Interdisciplinary specialization. A student interested in opting for a Capability-linked option can register for the same online, on a first-come first served basis, after he/she completes at least 2 courses, preferably the core courses (wherever applicable) of the Minor Area / Interdisciplinary / Departmental Specialization being applied for.

Some of the courses listed under the programmes below under Minor Areas/Internship/Department specifications are in the process of academic approval by the senate, and their course number and other details are incomplete. These would be updated as and when the same are finalized.

Minor Area in Atmospheric Sciences (Centre for Atmospheric Sciences)

Minor Area Core

ASL310	Fundamentals of Atmosphere and Ocean	3	0	2	4
ASL320	Climate Change: Impacts, Adaptation and Mitigation	3	0	2	4
Total Credits		8			

Minor Area Electives

ASL410	Numerical Simulation of Atmospheric and Oceanic Phenomena	3	0	2	4
ASL701	Dynamics of Atmosphere and Ocean	3	0	0	3
ASL703	Physics of Atmosphere and Ocean	3	0	0	3
ASL705	Boundary Layer Meteorology and Air Pollution	3	0	0	3
ASL706	Parametrization of Physical Processes	3	0	0	3
ASL707	Mathematical and Statistical Methods in Atmospheric Sciences	3	0	0	3
ASL710	Atmospheric Physics	3	0	0	3
ASL712	Air-Sea Interaction	3	0	0	3
ASL715	Science of Climate Change	3	0	2	4
ASL718	Tropical Meteorology	3	0	0	3
ASL720	Satellite Meteorology and Remote Sensing	3	0	0	3
ASL722	Biological Oceanography	3	0	0	3
ASL724	Atmospheric Diffusion and Air Pollution	3	0	0	3
ASL804	Air Pollution Monitoring and Health Risk Assessment	2	0	2	3
ASL808	Atmospheric Chemistry and Aerosols	3	0	0	3
ASL819	High Performance Computing in Atmospheric Sciences	2	0	2	3

Minor Area in Biological Sciences (Kusuma School of Biological Sciences)

Minor Area Core

SBL201	High-Dimensional Biology	3	0	0	3

ELD455	BTP Part-II				

8. NON-GRADED UNITS

Non-graded Units

In order to synergize formal academics with informal outside-class-room learning experience, mechanisms for earning non-graded units have been introduced in the revised undergraduate curriculum. In order to earn these units, a student will need to involve himself/herself in activities beyond the classroom engagements. For earning 1 unit a student will typically need to work for 2-3 hours per week (28-42 hours per semester) in on-campus activities. In case of project / design / internship activities, the student engagement expected is typically 20 man-days of work per non-graded unit. A student would not be allowed to earn credits as well as non-graded units for the same effort - it is important that the efforts towards earning non-graded units should be distinct from that spent on earning credits.

Non-graded core of the undergraduate curriculum comprises the following components:

1.	Introduction to Engineering & Programme	:	02 units
2.	Language and Writing Skills	:	02 units
3.	NCC/NSO/NSS	:	02 units
4.	Professional Ethics & Social Responsibility	:	02 units
5.	Communication Skills / Seminar	:	02 units
6.	Design/ Practical Experience	:	05 units
Total		:	15 units

These 15 units form a compulsory graduation requirement for all the undergraduate (B.Tech. as well as Dual degree) programmes. A student will need to earn these 15 units over the duration of the programme with special consideration and requirements for each component as detailed in the following paragraphs. Each component would be constituted by one or more non-graded courses, and a student will need to get an S grade in these courses to earn the respective non-graded unit(s). Incomplete performance in such courses will be indicated by a Z grade. The student would be required either to repeat the course / activity or continue the project / internship until such time that the evaluating faculty member / committee is satisfied with the effort to award an S grade. No partial / fractional units can be awarded. For example, if a particular course carries 2 units, a student cannot be awarded 1 unit or fractional units for incomplete work, but would need to repeat / complete the work to the satisfaction of the evaluating faculty member / committee to become eligible for award of the units.

8.1 Introduction to Engineering and Programme

This non-graded component is aimed at orienting and exciting students in the subject of engineering in general and their respective disciplines in particular. The objectives of the component are:

- Exposing students to “Engineering” as a profession that creates wealth for nations, and is a vehicle for economic growth.
- Exposing students to Science/ Engineering as a medium through which one can address problems facing the society including some of the grand challenges.
- Excite students by enabling them to appreciate role and enormous impact of research in science/ engineering on our day to day lives.
- Enlighten students about the various career options available to them.
- Make students aware of the issues involved in engineering a product, and help them appreciate why the process of design and innovation leading to products and systems is both personally satisfying and professionally rewarding.
- Excite students about potential role models and successful alumni in engineering profession.
- Motivate students to take up some co-curricular activities on their own during their stay in the institute.

The activities to realize the above objectives as part of this non-graded component include:

- Understanding engineering through product dissection & reverse engineering. (Many of these could be physical products given to students to dissect and some of these could be in the form of videos).
- Screening of videos which bring out the strong relation between science/engineering and societal needs.
- Conducting design & innovation contests among students.
- Solving science/engineering puzzles in the class.
- Lectures from successful industrialists & entrepreneurs about their journey.
- Exposure to successful research cases from the institute and the impact of the same.

- Exposure to successful products / innovations from the institute which have reached people/ industry/ society.
- Some interesting demonstrations in laboratories.
- Hands-on exercises in laboratories including use of breadboard circuits, Lego sets, robot kits, balsa bridge engineering kits, fibre optic kits, mobile apps etc.
- Industry visits
- Visits to on-going exhibitions in the city
- Do-it-yourself projects in teams
- Lectures by faculty, visitors, alumni on some exciting topics.
- Lectures by successful entrepreneurs/ incubators/ alumni.

This non-graded unit is administered in the form of two non-graded courses of one unit each:

- NIN100 Introduction to Engineering in the first semester of the undergraduate programme, and
- XXN101 / XXN111 Introduction to <the respective engineering discipline> in the third semester.

Here, XX stands for the Course code prefix of the Department offering the undergraduate programme and <the respective engineering discipline> stands for the name of the undergraduate programme to which the student belongs. Table 7.1 lists the courses corresponding to the different undergraduate programmes:

Table 7.1 List of Introduction to Engineering Courses Offered by Departments

S. No.	Programme Code(s)	Course Code	Course Title
1	BB1, BB5	BBN101	Introduction to Biochemical Engineering and Biotechnology
2	CE1	CVN101	Introduction to Civil Engineering
3	CH1, CH7	CLN101	Introduction to Chemical Engineering
4	CS1, CS5	CON101	Introduction to Computer Science and Engineering
5	EE1	ELN101	Introduction to Electrical Engineering
6	EE3	ELN111	Introduction to Electrical Engineering – Power and Automation
7	ME1	MCN101	Introduction to Mechanical Engineering
8	ME2	MCN111	Introduction to Production and Industrial Engineering
9	MT1, MT6	MTN101	Introduction to Mathematics and Computing
10	PH1	PYN101	Introduction to Engineering Physics
11	TT1	TXN101	Introduction to Textile Technology

Course coordinator of NIN100 is identified by the Dean Academics. For all the Departmental courses listed in Table 7.1, the Departments offering the UG programme identify the course coordinators. It is necessary to get a satisfactory (S) grade in both these courses for completing the degree requirements. Attendance would be one of the main criteria for evaluation. Apart from this active participation and quiz based evaluation etc. would also be used as a basis to decide S or Z grade. The grades of NIN100 would be moderated by Dean Academics, and those of the Departmental courses would be moderated in the respective Departments. In case a student is awarded Z grade he/she would need to repeat the course in the subsequent year.

8.2 Language and Writing Skills

All students, in the first two semesters, are required to undergo exercises designed to impart language skills-enhancing their ability of listening comprehension, reading and writing in English. These exercises would be tailored according to the background of the students. The background of the students would be assessed through a test to be conducted in the beginning, typically during their admission and orientation period. The students would also be exposed to principles of English grammar and nuances of technical writing. Textual material and lectures would focus on the relationship between Engineering, Humanities and Social Sciences.

This component is also administered in the form of two courses, each of one unit: NLN100 Language and Writing Skills – I in the first semester and NLN101 Language and Writing Skills – II in the second semester. Course coordinators for these courses are identified by the Dean Academics. Assessment of a student towards S grade in each of these courses would

typically be on the basis of attendance, participation and performance in the exercises. A student could also be prescribed self learning exercises or additional practice sessions during vacations as requirement for securing S grade. Student's involvement, during regular semester, would typically be two hours per week. The grades of these courses are moderated by the Dean Academics.

8.3 NCC/ NSO/ NSS

A student is required to choose one of NCC/NSO/NSS by during his/her first semester, and complete the requirements within the first four registered semesters. Students will be required to earn 2 non-graded units from one of these activities, by completing 100 hours of work. The faculty coordinators of NCC / NSO / NSS decide and announce the policies on earning non-graded units in these activities from time to time. A student is typically expected to complete the 100 hours of activities in one of these three options by the end of the fourth registered semester or the summer after the fourth semester, failing which he/ she would not be allowed to register for the fifth semester.

8.4 Professional Ethics and Social Responsibility

There is increasing consensus worldwide that engineering ethics should be incorporated into the engineering curriculum to provide students with an exposure to the kind of professional ethical dilemmas they might face on an individual basis as well as in the larger ethical aspects of technology development. Workshops, discussion/ debates, use of theatre-in-education, case-study based approaches, etc. are often used for illustration and discussion of engineering ethics and such inputs could be provided in a stand-alone manner or integrated into existing courses (or both). The objective of this non-graded component is to sensitize students about Professional Ethics and Social Responsibility (PESR) through a combination of the above-mentioned approaches, supplemented by other material and discussion fora, to ensure that graduates of IIT Delhi become ethical professionals. A student is required to complete this non-graded component in the first six registered semesters of the undergraduate programme, through activities divided into four courses. The courses NEN100 and NEN101 together constitute 1 non-graded unit, and the course NEN200 along with one of the three alternatives NEN201/NEN202/NEN203 constitute the second non-graded unit for PESR:

- i) NEN100 Professional Ethics and Social Responsibility - I
- ii) NEN101 Professional Ethics and Social Responsibility - II
- iii) NEN200 Professional Ethics Case Studies
- iv) One of the following three courses:
 - NEN201 PESR Internships
 - NEN202 PESR Workshops
 - NEN203 PESR Projects

NEN100 and NEN101 are compulsory for all students and these courses involve interactive sessions of a group of about 20 students with a faculty mentor in the first and second semesters respectively. The student will earn one unit by getting S grade in both these courses.

The second unit under PESR has two components. The first component, Professional Ethics Case Studies, is compulsory, and is offered under the course number NEN200. For the second component, the students can choose to participate in any one out of a large variety of activities relevant to the core themes of PESR. With the considerable amount of flexibility allowed in the choice of activities, each student should be able to identify an activity of interest to him/ her under the purview of PESR. These activities have been divided into three broad categories, viz., (a) PESR internships (b) PESR workshops (c) PESR projects, each of which corresponds to a separate course number NEN201, NEN202 and NEN203 respectively. A student can choose to register for any one of these three courses after getting S grade in both NEN100 and NEN101. After a student has got S grades in NEN100 and NEN101, the student can register for NEN200 and one of NEN201/202/203. By completing the requirements of these courses by earning S grade in each, a student can earn the second non-graded unit under PESR resulting in completion of the degree requirements for this non-graded component.

In NEN200, every student will work on at least two case studies related to professional ethics, followed by discussions on the same, moderated by a faculty member. The details on how to select the case studies and the mode of discussions and their evaluation would be decided by the PESR committee from time to time and notified to the students.

Under NEN201 PESR Internships, students can take up field work during summer/ winter vacation with organizations anywhere in the country, outside the Institute. These organizations could be NGOs or CSR units of industries. The students could also choose to work with organizations in their home towns. These internships must involve an exposure to the life of communities outside the campus. Before going for an internship with an organization, the

student will have to register for NEN201, and submit a request to the Institute level PESR Committee, specifying the internship details including the duration and take prior approval. The student will be able to get an S grade in this course only if the student has satisfied the concerned organization and has attended the internship for at least the number of days specified in the prior approval. A documentary proof of the same from the organization should be submitted by the student to the PESR Committee. No credit will be given to the student if he/ she attends the internship for less number of days than specified in the prior approval.

If a student gets selected in one of the nation building initiatives organized by reputed organizations (Examples: Participating in Jagriti Yatra, working as a summer fellow with Rakshak foundation etc.) and successfully completes the same, he/she would be considered to have completed the requirements under NEN201 and hence would be awarded S grade in the same. Even to exercise this option, a prior approval of the committee, registration in NEN201, and submission of documentary proof to PESR committee are mandatory, as specified above for internships.

Under NEN202 PESR Workshops, the students can participate in one or more workshops, of 3-8 days' duration, approved by the PESR Committee. These workshops would be organized by a faculty coordinator on campus and would be conducted by resource persons from within or outside the campus. These workshops could be pertaining to any of the several themes relevant to PESR and could be held during mid-semester break/ summer/ winter vacation or even long weekends during the semester. The students must register for the workshop whenever it is announced. The credit for attending a workshop will be provided ONLY if the student attends the workshop on ALL the days for its full duration. No credit for a workshop will be given if the student attends the same only partially. In order to claim non-graded units for this course, a student should register for the course NEN202, register separately for the workshop, complete the workshop and produce documentary evidence to the PESR committee through the faculty coordinator organizing the workshop.

Under NEN203 PESR Projects, the students can take up projects under the guidance of a faculty member to make positive contribution to campus life. This could include promoting wholesome practices on campus such as : ethical practices particularly among students through specially directed efforts; peer assistance for the students in need of help academically or otherwise; sustainable practices on campus like resource conservation, waste management, use of renewable resources and the like; working on technology for a social cause etc. This work could be done during a semester or mid-semester break or summer/winter vacation. After registering for NEN203, the student must get the project proposal with clear statement of deliverables approved by the PESR committee. If the work is taken up in a team, each student's share of work must be defined in the proposal. On completion of the project, the students should submit a certificate from the faculty member in charge of the project stating that each student has completed his share of the deliverables and each student has put in at least 50 man-hours of work into the project. The PESR Committee may also decide to evaluate the project by additional means as deemed fit.

As part of the requirements for NEN201/ 202/ 203, there would be a compulsory component of experience sharing in 2-hour sessions. This would be in small groups, where each student makes a presentation and listens to others, and/or presents a poster in an exhibition open to the campus community. Whenever a student has completed the other requirements of NEN201 / 202 / 203, he/ she should submit a request to the Committee with the documents as mentioned above. The PESR Committee would then help in scheduling the experience sharing session before finally awarding S / Z grade.

If a student has a confirmed/ approved registration in an internship/ workshop or a project but does not turn up for the same, he/ she can be penalized by the PESR committee with an increase in the number of PESR units to be completed by the student for the degree requirements.

Overlapping Activities: Many of the activities listed above for NEN201/ 202/ 203 are also activities that can be taken up by students either under NSS or for earning Design units through co-curricular project-based activities, such as the Summer Undergraduate Research Award (SURA) or Design and Innovation Summer Award (DISA). Some of the technical projects may also be registered under Minor/ Mini/ Major projects towards earning graded credits. In this regard, the following would be strictly followed:

- a. In case a project is evaluated for graded credits or for any other non-graded activity, it would not be allowed under NEN203. A student should submit a certificate to this effect, countersigned by the respective faculty member in charge of the project, as part of the proposal.
- b. However, additional work which is not evaluated for such projects, either done prior to such projects or done after the completion of such projects, could be considered under NEN203. In such a case, prior written permission must be taken from the PESR committee, clearly specifying the distinct components of work being submitted for the other graded / non-graded evaluations and for NEN203.
- c. The workshops organised by NSS and under NEN202 should generally be distinct. Under NEN202, workshops would have minimum duration of 3 days and would be designated as "PESR WORKSHOP". Workshops organized by NSS would not be counted for NEN202 and vice-versa.

- d. In case a student desires to do internship as part of NSS activities as well as under PESR through NEN201, each of these internships must have distinct time spans and special approval of the PESR Committee as well as NSS Coordinator are required for the same. The same work during an internship cannot be counted for NSS hours as well as for NEN201.

Table 7.2 summarizes important information about the non-graded units under PESR towards degree requirements.

Table 7.2 Summary of Requirements of the Non-Graded Component on Professional Ethics and Social Responsibility

S. No.	Course	Period of Activity	Description	Requirement for S grade	No. of units
A	Part-1: Regular Classroom Contact				
1.	NEN100 Professional Ethics and Social Responsibility–I	1st Semester	Regular sessions of 1.5-2 hours with a faculty mentor. Activities in the sessions to be decided by the faculty.	15 hours in regular sessions	1
2.	NEN101 Professional Ethics and Social Responsibility–II	2nd Semester	Regular sessions of 1.5-2 hours with a faculty mentor. Activities in the sessions to be decided by the faculty.	15 hours in regular sessions	
B	Part-2: Case Studies and Practical / Field Activity <ul style="list-style-type: none">Each student should register for NEN200 and ANY ONE of NEN201, NEN202, NEN203To be completed before the beginning of 7th semesterActivities as listed below followed by A PRESENTATION IN AN EVALUATION SESSIONSatisfaction of ALL the requirements set out by the respective in-charge/resource persons/faculty. NO PART CREDIT.				
3	NEN200 : Professional Ethics Case Studies	5 th or 6 th registered semester	Work on two case studies on Professional Ethics; Participate in discussions moderated by a faculty member	Recommendation of S grade by the faculty member(s) moderating the discussions	1
4.	NEN201 : PESR Internships	summer/winter vacations after S grades in NEN100 and NEN101	Engagement with communities/NGOs OUTSIDE IITD involving technical or non-technical work or internship with the CSR unit of an industry involving field work	For residential internship/ camp with an organisation: 6-8 days of stay in the camp. For non-residential internship: 20 working days of internship. Prior approval of PESR committee specifying the type and length of the internship / camp; S grade to be awarded only for full duration. No credit for attending the internship for less number of days than that specified in approval.	
5.	NEN202 : PESR Workshops	Mid-semester breaks/ summer/winter vacations after S grades in NEN100 and NEN101.	Participation in intense ON-CAMPUS workshops approved by Dean Academics, of 3-8 days duration, conducted by professional resource persons, with special emphasis on themes related to PESR.	Completion of either a single workshop of at least 6 days' duration OR two workshops of at least 3 days' duration. S grade to be awarded only for attending the workshop for full duration. No credit for attending the workshop for less number of days.	

6.	NEN203: PESR Projects	Semester/ summer/winter vacation/ mid-semester breaks after S grades in NEN100 and NEN101	<p>Taking up on-campus projects under the guidance of a faculty mentor, related to any of the topics relevant to PESR, such as (but not limited to)</p> <p>A. Promoting ethical practices on campus in various spheres particularly related to student life on campus.</p> <p>B. Strengthening the existing systems and designing and implementing new ones for an active student community participation in addressing the academic as well as other problems of student community.</p> <p>C. Developing socially relevant technologies</p> <p>D. Promoting Sustainable Practices in hostels, academic area, residential areas etc., involving activities pertaining to conservation of water / electricity / paper / other resources, waste management, promoting use of bicycles, etc.</p>	<p>Prior approval of project proposal by PESR committee clearly specifying deliverables and work share of each student if group project; Completion of the project deliverables identified in the proposal - It must involve at least 50 hours of work by each student.</p>	
----	-----------------------	--	---	---	--

8.5 Communication Skills / Seminar

Communication skills are an essential requirement for an engineer. The objective of this non-graded component is to provide the students with an opportunity to develop their skills in preparing write-ups and / or making presentations, and reading / listening to others' write-ups / presentations. A student would be required to earn these units in the 3rd and/or 4th year. This component would be administered in two parts:

- (i) A set of topic specific seminar courses (XXQ301, XXQ302, etc.) introduced by the parent Department of each student (for example ELQ301 – Seminar on Embedded Systems – 1 unit). These courses would be non-credit electives, offered in each semester. These seminar sessions would be held for two hours per week. Multiple such courses could run in parallel. These seminars would also be open to all faculty and students of the Institute. These seminars could be scheduled within or outside office hours. Students need to register for at least one such course in his / her parent department for earning one unit.
- (ii) Students should earn the remaining one unit through any one of the following means:
 - a. By registering and completing an additional seminar course (XYQ301, XYQ302 etc.) offered by any other department / centre/ school.
 - b. By participating in course seminars of regular courses; for example regular L courses can have optional seminar component (e.g. ELL711 Optical Communications can have optional seminar component of 1 unit). This would, like any other seminar course, need to have seminar sessions of 2 hours duration every week for a whole semester. In such a case, a student should register for NQN301, and the course coordinator would send recommendations for S grades to the Dean Academics, duly moderated by the Moderation Committee of the concerned Department / Centre / School.
 - c. By successfully undergoing Communication Skills course/workshop as an activity approved by Dean Academics. In order to earn the non-graded units, a student should register for the course NQN301, which would be graded with S on successful completion.

- d. By submitting documentary evidence of excellence in debating and/or writing as certified by faculty in-charge of these activities, to the Dean Academics. In all such cases, the student should register for NQN301, and submit documentary evidence as detailed below.
- Any student who wins first, second or third position in any event/competition conducted at hostel level, or by BRCA or by BSP or by BSW would qualify for this option. The event/competition must be a debate/declamation/extempore. Since many such events do not have certificates issued, the student must submit a letter signed by the warden or the president of the respective board (in case of BRCA, president of the club would also suffice) stating the date, time, venue of the event/competition along with the number of participants and position secured. In case number of participants is less than 20, the event shall not be counted.
 - Any student who performs as a compere for any of the Institute functions (only those listed in the Institute calendar). The student will need to produce a signed letter from the faculty in-charge of the Institute function stating the student's role as compere. The letter must include the date, time, venue and duration of the event. Any event lasting less than 1 hour will not be counted.
 - Any student winning a technical paper presentation award during TRYST will need to submit a copy of the certificate and the abstract of the paper presented. Technical publications in Journals or conferences certified by the faculty member(s) who guided the work would also be considered, provided the number of student authors does not exceed two.

A minimum of three such documents certified by the Faculty in charge of the Board / Club as mentioned above would qualify a student to earn one unit of communication skills/ seminar. All such claims should be submitted by students within two weeks of the event. In each case, before recommending the award of non-graded units for the above activities, the Faculty in charge of the Board / Club should keep in mind that a student engagement / effort (including preparations and the actual event) of 28-42 hours would be necessary for the award of one non-graded unit.

In cases of options (i), (ii) a and (ii) b above, the faculty member in charge of the course should ensure that the student has 100% attendance in the seminars, and has done a satisfactory task of his /her contribution to the course: the write-up, presentation, etc. before awarding an S grade. These grades would be moderated by the respective Department/ Centre / School. In case of unavoidable absence of up to 3 seminar sessions, appropriate compensation mechanism should be announced by the faculty member at the beginning of the course. For absence beyond 3 sessions, the non-graded units cannot be awarded.

An Institute level Committee for Communication Skills / Seminar would be appointed by the Dean Academics. The convener of this committee would serve as the course coordinator of NQN301. This committee would moderate the non-graded units for Communication Skills / Seminar recommended for activities other than the courses XXQ30y, XYQ30y etc.

A student needs to secure an S grade in both parts of the communication skills / seminar non-graded component to complete graduation requirements.

8.6 Design and Practical Experience

The objective of this non-graded component is to give opportunities to students to learn in an informal setting. This mode of learning, is often more effective than conventional lectures/laboratory work. Second and even more important objective of this non-graded component is to inculcate design thinking among students and facilitate them to gain some design immersion experience. Design and Practical Experience (DPE) component can promote learning by doing which does two important things: Firstly, it allows students to immerse themselves in the environment in which work is to be done, so that they can understand the values and expectations of the target beneficiaries. Secondly it enables a fresh look at problems, not only at the ways of defining them, but also at the ways to solve those including skill-sets that are required to address them. A shift from problem based learning (acquisition of knowledge) to project based learning (application of knowledge), where the projects are grounded in problems outside the classrooms and laboratories, in everyday scenarios. Thus, DPE bridges division between the curricular and the co-curricular components, and encourages the curiosity and involvement that arises from total absorption in a subject of interest.

As a part of this requirement, every student is expected to earn a minimum of five non-graded units of DPE to complete the degree requirements. These units can be earned in multiple ways during the semester as well as during vacation and mid-semester breaks:

- Courses with design focus without any regular graded credits, which are designated to give design/practical experience units.
- Courses (core or elective) with optional design/practical experience component.
- Summer/semester internships by students in R&D / Industry / Universities in India or abroad.
- Summer / winter / semester projects under the guidance of institute faculty.
- Participation in design /innovation projects by Innovation Center/ CAIC, etc.
- One time activity such as design/practical experience workshop/course/event with 28-42 hours of student involvement during the semester or during semester / mid-semester breaks, etc.

DPE activities are not restricted to design of physical products but can also include system level design and experience. For example a team of students who under the supervision of faculty in collaboration with an NGO, would like to design a new financial inclusion system for marginalized section of population too can earn design/practical experience units.

In the following paragraphs, the operational modalities of implementing the above activities so that students can earn the required non-graded units, are presented.

8.6.1. Management of Non-graded DPE units

Each Department offering UG programme(s) would constitute a DPE Committee with a Departmental DPE Coordinator to manage the non-graded Design and Practical Experience units.

- a) The Departmental DPE Committee would coordinate with T&P Unit to identify and vet industries for internships.
- b) The committee would also examine other types of internship (Universities, research laboratories, start-ups etc.) requested by students and approve or deny as per a policy defined by the Department.
- c) Students of the Department desirous of earning non-graded DPE units through any other mechanism listed above should request permission of this committee before embarking on the activity. The committee would also coordinate the award of non-graded DPE units for all such activities for the students of the Department through appropriate evaluation mechanisms.
- d) The committee would be responsible to evaluate the design activities carried out by the students during internships and recommending award of the non-graded DPE units, or continuation of the internship activity for more days to become eligible for the units, as per the efforts of the students during the internship. The DPE Committee will moderate all Design units awarded to students of that Department. The Departmental DPE Committee also has the responsibility of ensuring that units earned by heterogeneous activities meet the requirements in terms of learning efforts and experience.
- e) The Dean Academics will appoint a faculty member who would be the Institute DPE Coordinator for Design and Practical Experience units.
- f) Departmental DPE Coordinators, Institute DPE Coordinator and Associate Dean Academics-Curriculum together will form an institute level committee to moderate the non-graded units awarded under interdisciplinary work as well as those offered by Departments, Centers or Schools not offering UG programmes. This committee would also be responsible to review and modify policies as well as modalities of administering DPE units.

8.6.2 Activities covered under Design and Practical Experience

8.6.2.1. Specialized Elective Courses related to Design and Practical Experience XXD35y (Maximum 2 Units)

Departments/ Centres/ Schools may offer a basket of elective courses that will not have any credits associated with them but will have only Design and Practical Experience units linked to them. In other words on successful completion of such courses the students will earn only DPE units but no graded credits. These courses offered by departments/ Centers/ Schools can be of one unit (28-42 hours of student effort) or two units (56-84 hours

of student effort). Faculty offering these courses will award these units on successful completion of the course requirements, and the same would be moderated by the Departmental Committee for DPE in case of Departments offering undergraduate programmes. For other Departments / Centres / Schools, the moderation would be done by the Institute level DPE committee.

8.6.2.2. Semester / Summer / Winter Projects under the guidance of IIT Delhi Faculty (Maximum 2 Units)

Some of the co-curricular activities in the institute that pertain to team based product building such as Robotics, Automobile, IGEM, Aero-modelling etc. can also be considered for earning DPE units. SURA/ DISA projects related to design and practical experience too can be brought under this option. In order to be evaluated for Design and Practical Experience Units in such cases, a student should register for XXD35y Minor Design Project floated by Department XX or NDN35y Minor Design Project. In either case, the project would be evaluated by the faculty supervisor. In case the project is interdisciplinary, the faculty supervisor of the project may advise the students to register for the latter. The former would be moderated by the Departmental Committee for DPE while the latter would be moderated by an Institute level committee for DPE for award of Design units.

It should be noted that Courses XXD351 – XXD355 would be Minor Design Projects with 1 non-graded DPE unit, and XXD356 – XXD357 would be Minor Design Projects with 2 non-graded units each. These courses should be registered by students in their numerical sequence. Courses NDN351 – 357 would also follow a similar definition.

8.6.2.3. Regular Courses with optional Design and Practical Experience Component (Maximum 2 Units)

Departments and faculty offering regular core and elective courses can offer optional design component in their courses at the time of offering the courses. A proposal for this should be sent for the approval of Dean Academics prior to the commencement of the course by the Course Coordinator and the concerned Department. On approval, this would be notified to students by the Departmental DPE committee. Successful completion of the course will give graded credits to students and at the same time they will be eligible for earning (1 or 2) design units if they successfully complete optional design component. Faculty offering these courses will award these design units on successful completion of assigned design work. This would be moderated by the Departmental Committee for DPE. In case the course is offered by Departments / Centres / Schools which do not offer a UG programme, the notification prior to beginning of the course and moderation after the end of the course would be done by the Institute level DPE committee.

8.6.2.4. Summer Internships (2 Units)

Students can undertake a minimum of 40 working days of internship to earn two design practical experience units during summer vacations in Industry, R&D institutions or Universities in India or abroad. This would be administered by the Departmental Committee for DPE, which would also be responsible appointing a faculty supervisor for the internship, and for awarding the Design units. Students can proceed with the internship after the Departmental Committee for DPE approves the same. Design units for the internship would be awarded by the Departmental Committee after evaluation at the end of internship period. Details are given in a separate paragraph on internships below. The DPE committee may refer an internship request to the Institute level DPE committee in case the work pertains to areas outside the Department's interests. Details of the procedure are given in sub-section 7.6.3 on internships.

8.6.2.5. One-Semester Internship (Maximum 5 Units)

Students can opt for one semester internship in Industry, R&D institutions or Universities in India or abroad, for a minimum of 100 working days, by appropriately planning for completion of credit requirements for the degree. The student can also opt for a semester break to initiate or work for his/her start up. These are the only activities upon successful completion of which students would be eligible for 5 units of design practical experience. It is mandatory that student's work during the one-semester internship is supervised by two mentors, one from the institute (appointed by the DPE Committee of the student's Department) and another from the host organization. In case of semester break for a start up, students will work under the mentorship of a faculty member of the Institute. Students desiring to opt for one semester internship or semester break for start-up as mentioned above are required to plan well in advance and submit a project proposal in consultation with their supervisors (in case of internship) or faculty mentor (in case of start-ups). Students can proceed with the internship after the Departmental Committee for DPE approves the same. Design units for the internship would be awarded by the Departmental Committee after evaluation at the end of internship period. Details are given in a separate paragraph on internships below. The DPE committee may refer an internship request to the Institute level DPE committee in case the work pertains to areas outside the Department's interests. Details of the procedure are given in sub-section 7.6.3 on internships.

8.6.2.6. One Time Design Practical Experience Module (1 Unit)

For both existing and visiting faculty as well working professionals from industry, NGO & Freelancers who would like to engage students in a workshop/course related to design and practical experience, this one time module can be offered as one unit course. The procedure for offering these courses would be the same as that for offering short-term specialized module courses (V-courses). A proposal for the course should be sent to the Dean Academics for approval by the Chairman Senate, by the faculty member coordinating the course through the concerned Department / Centre / School. These modules can be typically of 28-42 hours duration, and may be offered during mid-semester breaks, winter/summer vacations and even during non-class hours during the semester.

Table 7.3 summarizes the information presented in section 7.6.2. Detailed rules pertaining to internships and their administration are given in sub-section 7.6.3.

Table 7.3 Implementation and Evaluation Plan for Design and Practical Experience Units

Activity	Norms for the Activity	Criteria for awarding Units	No. of units	
			Min	Max
Courses with design focus (which are primarily design courses or has significant design component)	Courses offered as per Institute procedure	Registration by the student in the respective course; Evaluation by course coordinator; Moderation by DPE committee of Department / Institute	1	2
Course with optional design/practical experience component	Course Coordinator seeks prior approval of Dean Academics for the offering optional design units prior to commencement of the course	Registration by student for XXD35y/NDN35y; Evaluation by course coordinator; Moderation by DPE committee of Department / Institute	1	2
4-week project with Institute Faculty during winter/ summer (20 working days)	Notification of projects by DPE Committee of Student's Department / Institute	Prior approval by DPE Committee of Student's Dept; Registration by student for XXD35y / NDN35y; Evaluation by Faculty Mentor of the project; Moderation by DPE committee of Department / Institute	1	1
8-week project with Institute Faculty including SURA, DISA, etc. (40 working days)	Notification of projects by DPE Committee of Student's Department / Institute OR Announcement and selection by appropriate Institute bodies	Prior approval by DPE Committee of Student's Dept; Registration by student in XXD35y / NDN35y; Evaluation by Faculty Mentor of the project; Moderation by DPE committee of Department / Institute	2	2
8-week internship during summer with Industry / R&D / University (40 working days)	Arranged by T&P or self-arranged by the student in coordination with T&P	Prior approval by DPE Committee of Student's Dept; Registration by student in XXT200 / XXT300 and with T&P; Monitoring by Internship supervisor; Evaluation and Moderation by DPE committee of Department / Institute	2	2
One semester internship (100 working days) or One semester break for own start ups	Arranged by T&P or self-arranged by the student in coordination with T&P	Prior approval by DPE Committee of Student's Dept and Institute; Registration by the student in XXT400 and with T&P; Monitoring by Internship supervisor; Evaluation and Moderation by DPE committee of Department / Institute	5	5

Participation in design/ project activity under the supervision of faculty during semester	Notification of projects by DPE Committee of Student's Department / Institute	Prior approval by DPE Committee of Student's Dept; Registration by the student in XXD35y / NDN35y; Evaluation by Faculty Mentor of the project; Moderation by DPE committee of Department / Institute	1	2
Participation in design/ practical/ experience workshop/course/event organized by industry/ organizations/ visitors/ visiting faculty	The workshop should be offered in the form of a course as per Institute procedure for Short-duration (V-type) courses	Registration by the student in the course; Evaluation by Course Coordinator and Visiting Faculty offering the course if any; Moderation by DPE committee of Department / Institute	1	1
Participation in Design/ innovation projects by Innovation Center/CAIC bodies, etc.	Notification by the Faculty in-charge of the corresponding activity	Prior approval by DPE Committee of Student's Dept/ Institute; Registration by the student in XXD35y / NDN35y; Evaluation by faculty in-charge of activity / CAIC bodies / Coordinator Innovation Centre; Moderation by DPE committee of Department / Institute	1	2

- A student cannot register for more than 2 non-graded DPE units per summer or 3 non-graded DPE units per registered semester in which a student is on regular academic activity. To take part in activities that can result in more than 3 DPE units, a student has to take the semester off from regular courses.
- A single activity cannot be evaluated for more than one purpose: for example, the same project cannot be submitted for graded credits as well as for design units.

8.6.3 General Rules on Internship

- A student can do at most two internships for design units, during his/her stay at IIT Delhi. If any student does more than two internships, the design units will be awarded for the first two registered internships only.
- Internships for Design units are permitted only in one of the two following formats:
 - Summer internship of 40 days duration, in which a student can earn 2 design units.
 - Semester-long internship of 100 days duration, in which a student can earn 5 design units.

No other format of internship would be considered for the award of Design units. Design units would be awarded only if training for the stipulated number of working days, as mentioned above, is completed to the satisfaction of the concerned Departmental Committee. Design units would not be awarded against partial completion of the training duration.
- Summer internships are allowed in the summer after the 4th registered semester of the student or later. Semester Internships are permitted from the seventh registered semester or later.
- Internships are permitted in industry, research laboratories or academic institutions involved in research, development and/or technology transfer. Any student opting for semester long internship may also be allowed to work on a start-up. All internships must be approved by the department in advance. In the case of non-industry internships, the work should be research / development / practice oriented, and not classroom course work.
- In all cases, for award of non-graded design units, after completion of the internship, the work must be evaluated by the DPE committee of the student's Department or the Institute level DPE committee as the case may be. Both in case of activities in the Institute, as well as internships, partial award of units would not be allowed, and the student(s) would be advised to do more work and reappear before the committee in case the work is found wanting in any respect.

- vi) A student can choose from one of the following options in order to complete the Non-Graded component of Design and Practical Experience:
 - a. One semester internship, accounting for 5 DPE units.
 - b. One summer internship, accounting for 2 DPE units and 3 DPE units from other activities at IIT Delhi
 - c. Two summer internships, accounting for a total of 4 DPE units, and 1 DPE unit from other activities at IIT Delhi.
 - d. One summer internship accounting for 2 DPE units and one semester internship, accounting for 5 DPE units. However, a maximum of 5 DPE units can be earned by a student through internships.
 - e. No internships: all DPE units can be earned through design / project activities at IIT Delhi.
- vii) Both for self-arranged internships and IIT-arranged internships, administration and correspondence would be handled by the Training and Placement Unit. For self-arranged internships, any documentation regarding the bona fide status of students (while applying for training) will be done by UG section. T&P Unit will process the paperwork of the student once the student submits all departmental approvals and the confirmed offer letter from the company to T&P.

8.6.3.1. Registration Procedure for internships

Three new internship courses per Department as detailed below are available. Students who would like to opt for training will have to register for one of the three courses as per the following rules:

- a) The courses are: (XX stands for the two-letter Department Course Code in the following course numbers: BB, CL, CV, etc.)
 - i) XXT200 Summer Internship 1: 2 units
A summer internship of 40 working days.
Pre-requisites: Earned Credits: 30 (at the time of registration), 45 at the end of the July-November semester preceding the summer.
 - ii) XXT300 Summer Internship 2: 2 units
A summer internship of 40 working days, for students who have already done one summer internship.
Pre-requisites: XXT200
 - iii) XXT400 Semester Internship: 5 units
A semester internship of 100 working days.
Pre-requisites: Earned Credits: 60 (at the time of registration), 75 at the end of the January-April semester preceding the internship. Semester internships could begin in July or January, typically synchronized with the starting date of the respective semester.
- b) Students interested in summer / semester internships should follow the procedure outlined below:
 - i) All students opting for internships in summer should register for XXT200 or XXT300 (if opting for second summer internship) during the registration period in October preceding the summer. All those students who register would automatically be enrolled in the T&P process for internship allotment. In case the student wants to arrange the summer internship by himself/herself, and not use a T&P seat, he/she should drop the course in January, and re-register in April.
 - ii) A student who registers for one of these three courses during January-April semester will not be able to register for any course in the K, L and M slots, and T&P activities will be conducted during the timings of these slots.
 - iii) If a student is selected for an internship through T&P, he/she is bound to go for that internship. If the student does not take up and complete the internship, he/she will be debarred from all further T&P activities (including further internship opportunities and placement procedure). This stringent measure is adopted to ensure that non-serious students do not spoil either the chances of other students or the reputation of IIT Delhi with the companies offering internships through T&P.
 - iv) The data of all the students who register for an internship course will be copied to T&P portal, to make it feasible for the students to apply for internships through T&P. Students who drop the course in January would be excluded from further processing in T&P.

- v) T&P Unit will try and arrange internships for as many students as it can. However, it may not be possible for the T&P Unit to arrange internships for all the students who registered.
 - vi) T&P procedure for summer internships will begin in January and will continue in February. If T&P Unit is unable to provide internship to a student by the end of February, the student is exempted from the rule (iii) above, and can start trying for a self-arranged internship.
 - vii) Starting from October 2015, the T&P Unit would handle correspondences and training certificates of all internships, both self-arranged and those arranged through the T&P process. Once committed, a student will be bound to take up and complete the internship, whether it be self-arranged or T&P arranged. Failure to do so will attract stringent penalty, and such students would be debarred from all T&P activities including placements.
- c) Students, who opt for self-arranged internship, will have to register for one of the courses as per the following schedule:
- i) Summer Internship: Registration for XXT200 or XXT300 during the registrations in the month of April preceding the summer semester.
 - ii) Semester Internship during an odd semester (beginning in July): Registration for XXT400 during the registrations in the month of April preceding the semester.
 - iii) Semester Internship during an even semester (beginning in January): Registration for XXT400 during the registrations in the month of October preceding the semester.

The list of courses offered in connection with non-graded units listed in sections 7.1-7.6 along with the respective pre-requisites is summarized in Table 7.4.

Table 7.4 Summary of courses for non-graded units

S. No.	Course Number	Course Name and/or Description	Pre-Requisites	No of units
Introduction to Engineering & Programme: 02 units				
1	NIN100	Introduction to Engineering in the first semester	—	1
2	XXN101/ XXN111	Introduction to <the respective engineering discipline> in the third semester	NIN100	1
Language and Writing Skills – 02 units				
3	NLN100	Language and Writing Skills – I in I semester	—	1
4	NLN101	Language and Writing Skills – II in II semester	NLN100	1
NCC/NSO/NSS: 02 units				
5	NCN100 (Or)	NCC	—	2
	NPN100 (Or)	NSO	—	
	NSN100	NSS	—	
Professional Ethics & Social Responsibility: 02 units				
6	NEN100	Professional Ethics and Social Responsibility – I in first semester – 15 hours	—	1
7	NEN101	Professional Ethics and Social Responsibility – II in second semester – 15 hours	NEN100	

8	NEN200	Professional Ethics Case Studies	NEN101 + EC50	1
9	NEN201 (Or)	PESR Internships: 20 working days followed by a presentation and evaluation	NEN101	
	NEN202 (Or)	PESR Workshops: 40 hours followed by presentation and evaluation	NEN101	
	NEN203	PESR projects: 40 man hours of work followed by presentation and evaluation	NEN101	
Communication Skills / Seminar: 02 units				
10	XXQ301, XXQ302, etc.	Topic specific Seminar courses introduced by parent department	EC 50	1 each
11	XYQ301, XYQ302, etc.	Additional Seminar courses introduced by any other department/ centre/ school	EC 50	1 each
12	NQN301	Seminar component of regular courses	EC 50	1
Design/ Practical Experience: 05 units				
13	XXD351	Minor Design Project – 1	EC 50	1
14	XXD352	Minor Design Project – 2	XXD351	1
15	XXD353	Minor Design Project – 3	XXD352	1
16	XXD354	Minor Design Project – 4	XXD353	1
17	XXD355	Minor Design Project – 5	XXD354	1
18	XXD356	Minor Design Project – 6	EC 50	2
19	XXD357	Minor Design Project – 7	XXD356	2
20	NDN351	Minor Design Project – 1	EC 50	1
21	NDN352	Minor Design Project – 2	NDN351	1
22	NDN353	Minor Design Project – 3	NDN352	1
23	NDN354	Minor Design Project – 4	NDN353	1
24	NDN355	Minor Design Project – 5	NDN354	1
25	NDN356	Minor Design Project – 6	EC 50	2
26	NDN357	Minor Design Project – 7	NDN356	2
27	XXT200	Summer Internship 1	EC 30	2
28	XXT300	Summer Internship 2	XXT200	2
29	XXT400	Semester Internship	EC 60	5
In all above course descriptions, XX and XY stand for the two-letter prefix corresponding to course numbers of academic units: example, XXD351 corresponding to textile technology would be TXD351.

10. COURSE DESCRIPTIONS

The details about every course are given in this section. Information about each course includes course number, credits, L-T-P structure, Pre-requisites, overlapped courses and course contents.

For some 700 and 800 level courses, the Pre-requisites have been explicitly indicated. Where these are not mentioned, the default Pre-requisites shall be applicable for UG students (see sections 2.6 and 3.11).

For additional information see the website or contact the concerned course coordinator or head of the department/centre/school or the programme coordinator.

Department of Applied Mechanics

APL100 Engineering Mechanics

4 credits (3-1-0)

Kinematics, Statics, Equations of Motion, Rigid body dynamics, Introduction to variational mechanics.

APL102 Introduction to Materials Science and Engineering

4 credits (3-0-2)

Structure of Solids: atomic and inter-atomic bonding, crystal structure and imperfection in solids.

Properties of Materials: Mechanical, chemical, electrical and magnetic properties of metals, ceramics and polymers.

Processing of Materials: Thermodynamics basics, Phase diagrams and phase transformation of metallic systems, fabrication and processing of metals, polymers and ceramics.

Performance of Materials: Creep, fatigue, failure and corrosion of metals, ceramics (including cement and concrete), polymers, and composites (including fiber reinforced structure, sandwich panels, and wood).

Selection of Materials: selection of materials for various applications, materials selection charts, CSE software, Example case studies such as materials for large astronomical telescopes, springs, flywheels, safe pressure vessels and reactors.

Laboratory: The behavior of different types of materials (e.g. metals, ceramics, composites, polymers) will be studied through carefully designed experiments. The fundamentals of structure and properties of various materials will be communicated through hands on experiments and model demonstration.

APL103 Experimental Methods

4 credits (3-0-2)

Experimental Analysis: Types of measurements and errors, Relative frequency distribution, Histogram, True value, Precision of measurement, Method of least squares, the curve fitting, General linear regression, Theory of errors, Binomial and Gaussian distribution, Chi-square test.

Experimental Methods: Principles of Measurement, Basic Elements of a Measuring Device.

Displacement measurement, Force and Torque Measurement, Temperature Measurement, Pressure Measurement, Fluid Velocity Measurement, Miscellaneous measurements.

Dynamics of Measurements: Dynamic Response of a Measuring Instrument, Response to Transient and Periodic Signals, First and Second order systems as well as their Dynamic Response Characteristics.

Laboratory : The experiments have been designed to understand Experimental Analysis physically. Laboratory will enable the students to apply various statistical methodologies (viz. Mean, Median, Mode, Std Dev. etc) to get the optimum output from the day to day Engineering life experiment.

APL104 Solid Mechanics

4 credits (3-1-0)

Prerequisite(s): APL100

Overlaps with: APL105, APL108

Introduction, State of stress at a point, equations of motion, principal stress, maximum shear stress. Concept of strain, strain displacement relations, compatibility conditions, principal strains, transformation of stress/strain tensor, state of plane stress/strain. Constitutive relations, uniaxial tension test, idealized stress-strain diagrams, isotropic linear elastic, viscoelastic and elasto-plastic materials. Energy Methods. Uniaxial stress and strain analysis of bars, thermal stresses, Torsion, Bending and shear stresses in beams, deflection of beams, stability of equilibrium configuration.

APL105 Mechanics of Solids and Fluids

4 credits (3-1-0)

Prerequisite(s): APL100

Overlaps with: APL104, APL106, APL107, APL108

Fluid Mechanics MATHEMATICAL PRELIMINARIES: Cartesian Tensors, Index Notation, Integral Theorems. INTRODUCTION: Basic Concepts and Definitions, Solids and Fluids, Internal and external forces on a fluid element. PROPERTIES OF FLUID: Rheological Equation and Classification of fluids, Normal and Shear Stresses, Concept of Pressure, pressure gradient. STATICS OF FLUIDS: Types of Forces on Fluid Element, Mechanics of Fluid at Rest and in rigid body motion, Manometry, forces on fully and partially submerged bodies, stability of a floating body. KINEMATICS OF FLUID MOTION: Types of fluid motion, Stream lines, Streak and path lines, Acceleration and Rotation of a fluid particle, Vorticity and Circulation, Stream Function, Irrotational flow and Velocity Potential function. DYNAMICS OF AN IDEAL FLUID: Continuity and Euler's Equations of Motion, Bernoulli Equation, Applications to Flow Measurement and other real flow problems. MECHANICS OF VISCOUS FLOW: Navier-Stokes equations, exact solutions, Laminar flow through a pipe, Turbulent flow through a pipe, Friction factor, Applications to Pipe Networks. DIMENSIONAL ANALYSIS: Similarity of motion, Dimensionless numbers, Modeling of fluid flows, Applications. INTEGRAL ANALYSIS: Reynolds Transport Theorem, Control Volume Analysis.

Solid Mechanics: State of stress at a point, equations of motion, principal stress, maximum shear stress. Concept of strain, strain displacement relations, compatibility conditions, principal strains, transformation of stress/strain tensor, state of plane stress/strain. Constitutive relations, uniaxial tension test, idealized stress-strain diagrams, isotropic linear elastic and elasto-plastic materials. Energy Methods. Uniaxial stress and strain analysis of bars, thermal stresses, Torsion, Bending, Stability of Equilibrium.

APL106 Fluid Mechanics

4 credits (3-1-0)

Prerequisite(s): APL100

Overlaps with: APL107, APL105

Introduction to Fluids and the concept of viscosity, Flow visualization, Fluid Statics, Physical laws for a control volume including continuity, momentum and energy equations, Bernoulli equation, Differential equations of fluid motion, Navier Stokes equations, vorticity and potential flows, dimensional analysis and similitude, Boundary layer theory, 1-D compressible flow.

APL107 Mechanics of Fluids

5 credits (3-1-2)

Prerequisite(s): APL100

Overlaps with: APL106, APL105

Introduction to Fluids and the concept of viscosity, Flow visualization, Fluid Statics, Physical laws for a control volume including continuity, momentum and energy equations, Bernoulli equation, Differential equations of fluid motion, Navier Stokes equations, vorticity and potential flows, dimensional analysis and similitude, Boundary layer theory, viscous flow in ducts and applications to turbomachinery. Laboratory experiments will demonstrate the concepts learnt in the theory and appreciation of their limitations.

APL108 Mechanics of Solids

5 credits (3-1-2)

Prerequisite(s): APL100

Overlaps with: APL104, APL105

Introduction, State of stress at a point, equations of motion, principal stress, maximum shear stress. Concept of strain, strain displacement relations, compatibility conditions, principal strains, transformation of stress/strain tensor, state of plane stress/strain. Constitutive relations, uniaxial tension test, idealized stress-strain diagrams, isotropic linear elastic, viscoelastic and elasto-plastic materials. Energy Methods. Uniaxial stress and strain analysis of bars, thermal stresses, Torsion, Bending and shear stresses in beams, deflection of beams, stability of equilibrium configuration.

APL300 Computational Mechanics

4 credits (3-0-2)

Pre-requisites: APL104 / APL105 / APL106 / APL107 / APL108/ CLL231

APD310 Mini Project

3 credits (0-0-6)

Pre-requisites: EC 50

APL310 Constitutive Modelling

4 credits (3-0-2)

Pre-requisites: EC 50

APD311 Project

4 credits (0-0-8)

Pre-requisites: EC 50, 12 credits of Minor Area in Computational Mechanics

APL340 Chaos

4 credits (3-0-2)

Pre-requisites: APL100 and EC 50

APL360 Engineering Fluid Flows

4 credits (3-1-0)

Pre-requisites: APL104/ APL105/ APL106/ APL107/ APL108/ CHL231

APL380 Biomechanics

4 credits (3-0-2)

Pre-requisites: APL100 and EC 50

APL410 Computational Fluid Dynamics

4 credits (3-0-2)

Pre-requisites: APL106/ APL107/ APL105

APL440 Parallel Processing in Computational Mechanics

4 credits (3-0-2)

Pre-requisites: APL310

APL700 Experimental Methods

2 credits (1-0-2)

Basic principles of experimental analysis, Types of experiments, Planning of Experiments, Experiment design factors and protocols, Calibration, Standards, Measurement techniques, Methods for measuring flow, Sensors and Transducers, Errors analysis, Uncertainty analysis and propagation of uncertainty, Statistical analysis of the results, Probability distribution, Gaussian error distribution, multivariable regression, correlations, curve fits and Fourier analysis.

APL701 Continuum Mechanics

3 credits (3-0-0)

The primary objective of the course is to introduce basic contents of solid and fluid mechanics to first year PG students in common framework of "Continuum Mechanics" so that they pursue advanced topics in the respective areas at a later stage.

APL703 Engineering Mathematic and Computation

4 credits (3-0-2)

Tensors, Vector Calculus; Linear Algebra – Solution of Linear Systems, Eigenvalue Problems; Variational calculus; Fourier Series and transform, Analytical and Numerical Solution methods of ODEs, Partial Differential Equations – properties and solution techniques, Probability and Statistics.

APL705 Finite Element Method

4 credits (3-0-2)

Pre-requisites: EC 75

Strong and weak forms of governing differential equations, and their equivalence, Weighted residual and variational approaches. Ritz method. Discretization of weak form and boundary conditions. Convergence. Bar and beam elements. Truss and frame problems, Isoparametric formulation. Plane strain, plane stress and axis-symmetric problems, 3D elasticity problems, one and two dimensional heat transfer. Formulation of dynamics problems. Laboratory work on solid mechanics and heat transfer problems.

APL710 Computer Aided Design

4 credits (3-0-2)

Pre-requisites: EC 75

Principles of computer aided design, Computer graphics fundamentals, 2D and 3D Transformations and projections, Plane Curves, Space Curves, Synthetic curves, Analytical and parametric surfaces, Synthetic surfaces, Solid Modeling basics, Solid modeling techniques and schemes, Half-spaces, Boundary Representation (B-rep), Constructive Solid Geometry(CSG), Sweep Modeling, Analytical Solid Modeling, Visual Realism, hidden lines and surface algorithms, clipping, ray tracing.

Modeling exercises using solid modelers: Part modeling, editing model geometries, study of constraints, creating instances and features, curves and surface modeling, Assembling parts, Drafting.

Programming Exercises: Application of 2D and 3D Transformations and Projections, Examples of Curves and surfaces, clipping, ray tracing.

APL711 Advanced Fluid Mechanics

3 credits (3-0-0)

Mathematical Preliminaries, Kinematics, Navier Stokes equations and some standard solutions, Low Reynolds number flows and Lubrication, Vorticity dynamics, Introduction to boundary layers, Hydrodynamic stability, 1-D compressible flows.

APL713 Turbulence and its Modeling

3 credits (3-0-0)

Nature of turbulence, Governing equations, Fourier, Lagrangian and Eulerian description of turbulence, Statistical description of turbulence, Kolmogorov's hypotheses, turbulence processes, turbulence closure modelling.

APL715 Physics of Turbulent Flows

3 credits (3-0-0)

Introduction, nature of turbulence, methods of analysis, scales of turbulent flows.

Reynolds decomposition and the closure problem, estimates of the Reynolds stress, comparison with the kinetic theory of gases. Dynamics of turbulence, balance of kinetic energy, vorticity dynamics, scalar fluctuations. Free shear flows: jets, wakes and mixing layers. Wall bounded flows: channel and pipe flows, boundary layers. Kolmogorov hypotheses; probability density function, characteristic function and moments; structure and correlation functions; energy spectra, intermittency. Turbulent transport and dissipation.

APL716 Fluid Transportation Systems

3 credits (3-0-0)

Mechanism of transportation of materials by fluid flow, rheology and classification of complex mixtures, fundamentals of two-phase flow, Phase separation and settling behavior, Slurry Pipeline Transportation, Design methods, terminal facilities, pipe protection, pneumatic conveying, pneumocapsule and hydrocapsule pipelines, metrology associated with pipelines.

APL720 Computational Fluid Dynamics

4 credits (3-0-2)

Review of governing equations for fluid flow, finite volume method and its application to steady 1-D, 2-D and 3-D convection-diffusion problems, extension of FVM to unsteady 1-D, 2-D and 3-D convection diffusion problems, pressure-velocity coupling, staggered and colocated grids, solution of discretized equations, physical description of turbulence, Reynolds-Averaged Navier-Stokes equations, closure problem; RANS based turbulence models; DNS and LES.

APL734 Advanced Dynamics

3 credits (3-0-0)

Single Degrees of Freedom systems, Multi-degree of freedom systems, Response spectrum, Time integration schemes, Lagrange's equations, Principle of virtual work, continuous system.

APL736 Multiscale Modelling of Crystalline Materials

4 credits (3-0-2)

Pre-requisites: EC 75

APL740 Mechanics of Biological Cells

3 credits (3-0-0)

Pre-requisites: EC 75

APL750 Modern Engineering Materials

3 credits (3-0-0)

Pre-requisites: EC 75

Elastic moduli, coefficient of thermal expansion: how properties are related with the bonding between the atoms, packing of atoms in solids, crystal structure, Plastic deformation of materials: yield strength, tensile strength, ductility and toughness of materials, perfect crystal, role of dislocations, strengthening methods, continuum aspects of plastic flow, Fatigue, fracture and creep of materials, ductile and brittle failure, micromechanism of failure, fatigue failure, Creep deformation and failure, mechanism of creep, Oxidation and corrosion of materials, carbon steels, alloy steels, TRIP steel, Dual phase steel, Bainitic steel, Martensitic steel, aluminum alloys, titanium alloys, carbon nanotubes, structure and properties of novel engineering materials: Composite materials, hybrid materials, metal foams, nanocrystalline materials, smart materials, case studies of materials applications in automotive, aerospace, power generation sectors etc.

APL753 Properties and Selection of Engineering Materials

3 credits (3-0-0)

Pre-requisites: EC 75

Historical evolution of engineering materials, evolution of materials in products, Engineering materials and their properties: families of engineering materials, materials information for design, materials properties, Materials property chart: exploring materials properties, materials property charts e.g. the modulus-density chart, the strength-density chart, the fracture toughness-modulus chart, thermal conductivity-electrical resistivity chart, Materials selection-the basics: the selection strategy, materials indices, the selection procedure, Multiple constraints and conflicting objectives: selection with multiple constraints, conflicting objectives, Selection of materials and shape: shape factors, limits to shape efficiency, exploring the materials shape combinations, materials indices that include shape, architected materials, Processes and process selection: classification of processes: shaping, joining and finishing, processing for properties, process selection, ranking process cost, Designing hybrid materials: holes in materials property space, composites, sandwich structures, cellular structures, segmented structures, case studies.

APL756 Microstructural Characterization of Materials

4 credits (3-0-2)

Pre-requisites: EC 75

APL759 Phase Transformations

3 credits (3-0-0)

Pre-requisites: EC 75

Classification of phase transformations in materials, thermodynamics

and kinetics of phase transformations, nucleation and growth concepts. Spinoidal decomposition, reconstructive and displacive transformations, specific transformations such as casting, martensitic, bainitic, polymorphic, recrystallization, grain growth, precipitation hardening, particle coarsening, etc., crystallographic aspects of phase transformations, case studies in phase transformations.

APL763 Micro & Nanoscale Mechanical Behaviour of Materials

4 credits (3-0-2)

Pre-requisites: EC 75

Elastic anisotropy of crystalline materials, defects in crystals: point defects and interfaces, dislocations and analysis of plasticity, geometric and energetic aspects of dislocations, microscale mechanisms of plastic deformation such as slip and twinning, single and polycrystal deformation, crystallographic textures, theory of work hardening in crystals, strengthening mechanisms in crystals, nanoscale testing of materials: in-situ SEM/TEM, nanoindentation, nano-wear, correlation of nanoscale measured response to macroscale response of materials.

APL764 Mechanical Behaviour of Biomaterials

3 credits (3-0-0)

Pre-requisites: EC 75

Introduction and history of biomaterials; Basic classes of engineering materials and structure property correlation; Structure and property of cells and tissues; Property requirement of biomaterials including biocompatibility, and biobegradability; Basic types of biomaterials; Mechanical testing of biomaterials; application of biomaterials (orthopedic, cardiovascular, dental) including detailed case study.

APL765 Fracture Mechanics

3 credits (3-0-0)

Pre-requisites: EC 75

Fracture: an overview, theoretical cohesive strength, defect population in solids, stress concentration factor, notch strengthening, elements of fracture mechanics, Griffiths crack theory, stress analysis of crack, energy and stress field approaches, plane strain and plane stress fracture toughness testing, crack opening displacement, elastic-plastic analysis, J-integral, ductile-brittle transition, impact energy fracture toughness correlation, microstructural aspects of fracture toughness, environmental assisted cracking, cyclic stress and strain fatigue, fatigue crack propagation, analysis of engineering failures.

APL767 Engineering Failure Analysis and Prevention

3 credits (3-0-0)

Pre-requisites: EC 75

Common causes of failure, principles of failure analysis, fracture mechanics approach to failure problems, techniques of failure analysis, service failure mechanisms, ductile and brittle fracture, fatigue failure, wear failure, hydrogen induced failure, environment induced failures, high temperature failure, faulty heat treatment and design failures, processing failure (forging, casting, machining etc.), failure problems in joints and weldments, case studies for failure analysis of structural components and mechanical system.

APL771 Design Optimization and Decision Theory

3 credits (3-0-0)

The main objectives of the course are: formulation and solution of design optimization problems and application of decision theory for conceptual/detailed design selection problems.

APL774 Modeling & Analysis of Mechanical Systems

3 credits (3-0-0)

The main objective of the course is to introduce modeling and analysis of components/systems relevant for preliminary/detailed design of products through analytical and experimental techniques.

APL775 Design Methods

3 credits (3-0-0)

The main objectives of the course are to formulate technical specification of conceptual design problem, concept design, concept

selection and testing, detailed functional design and analysis, forecast of new technology development.

APL776 Product Design and Feasibility Study (Stream Core)

4 credits (2-0-4)

Prefeasibility Study, Market Analysis-Development of Sales Plan.

Technical Analysis- Development of Manufacturing Plan.

Financial Analysis-Develop General and Administrative Plan, Evaluate Project Feasibility, Preparation of project Proposal.

Human Factors in Design, Human factors and systems, Information input, Human output and control, Workplace Design, environmental conditions, human factors applications.

APL796 Advanced Solid Mechanics

3 credits (3-0-0)

Large deformation kinematics, lagrangian stress and strain tensors, balance laws in lagrangian framework, nonlinear constitutive modeling, nonlinear theory of beams and buckling, wave propagation, theory of plasticity, solution of elasticity problems – contact modeling, multiscale modeling etc.

APD811 Major Project Part 1

6 credits (0-0-12)

APD812 Major Project Part 1

12 credits (0-0-24)

APL831 Theory of Plates and Shells

3 credits (3-0-0)

Basic assumptions of two-dimensional theories, Theory of surfaces, Strain-displacement relations in shell coordinates, Stress-resultants,

General governing equations of motion, Boundary conditions. Analytical solutions for bending and vibration of rectangular plates and circular plates. Approximate solution techniques. Membrane theory and its applicability, Membrane and general bending solutions cylindrical, conical and spherical shells, and pressure vessels. Selected problems on the stability. Design considerations.

APL835 Mechanics of Composite Materials

3 credits (3-0-0)

Composites, Various reinforcement and matrix materials, Strength and stiffness properties, Effective moduli, Spherical inclusions, Bio-composites, cylindrical and lamellar systems, Laminates: Laminated plates, Analysis and Design with composites, Fiber reinforced pressure vessels, dynamic, inelastic and non-linear effects, Fabrication of composites, Machining of composites, Strength evaluation, Technological applications.

APL871 Product Reliability

3 credits (3-0-0)

Reliability; basic concepts, Uncertainty in engineering systems; Modeling, Multiple random variables, product failure theories, Failure models, Limit state function, Probability distribution, PDF & CDF, Evaluation of joint probability distribution, Markov Process, Stochastic Finite Element Analysis, Randomness in response variables, First and higher order methods for reliability assessment, Deterministic & probabilistic approach, Risk based design, Central limit theorem, load and resistance approach, Fault tree approach, system reliability, stress strength interference method, Monte-Carlo and other simulation techniques, Regression analysis, Software based reliability analysis, Sensitivity analysis and reliability based design optimization, international standards, Applications & case studies.

Department of Biochemical Engineering and Biotechnology

BBL110 Molecular Biotechnology

3 credits (3-0-0)

Overlaps with: BBL131, BBL132

The topics include introduction to cell, membrane structure and transport, enzyme technology, gene technology, Protein engineering and design, glycolysis and gluconeogenesis, citric acid cycle, ATP production, cell cycle, cell signalling, recombinant DNA technology including PCR, electrophoresis, cloning, and application of biological principles in Environmental Biotechnology.

BBL131 Principles of Biochemistry

4.5 credits (3-0-3)

Introduction-aims and Scope; Non-covalent interactions in biological systems, Carbohydrates-structure and function; Proteins-structure and function; Nucleic acids-structure and function Protein purification techniques; Introduction to enzymes; Vitamins and coenzymes; Lipids and biological membranes; Transport across cell membrane; Design of metabolism; Metabolic pathways for breakdown of carbohydrates-glycolysis, pentose phosphate pathway, citric acid cycle, electron transport chain, Photo-phosphorylation; Oxidation of fatty acids; Gluconeogenesis and control of glycogen metabolism, Signal transduction.

Laboratory: Estimation of proteins and nucleic acids; Extraction of lipids; Separation of lipids using thin layer chromatography, Gel filtration and ion exchange chromatography; Gel electrophoresis, Determination of enzymatic activities and determination of K_m , V_{max} . Identification of intermediates of EMP pathway.

BBL132 General Microbiology

4.5 credits (3-0-3)

The topics include introduction to prokaryotic and eukaryotic cell structure; different groups of microorganisms; microbial nutrition and growth; metabolism including important pathways; reproduction and recombination; preservation and control of microbial cultures; viruses; microbial pathogenicity.

Laboratory: Preparation and sterilisation of culture media, isolation of bacteria, Staining, Biochemical tests for identification of microorganisms, Antibiotic sensitivity, Bacterial growth curve, effect of environmental factors on bacterial growth, microbial diversity in environmental samples.

BBL133 Mass and Energy Balances in Biochemical Engineering

3 credits (3-0-0)

Overlaps with: CLL231, CHL251

Stoichiometric relations and yield concepts, Maintenance coefficient, Mass balance based on available electron concept; Units and dimensions, Fundamentals of material balance, Balance on unit processes and reactive systems, Behaviour of ideal and real gases, vapour pressure, humidity and saturation. Energy balance, Heat capacity of gases, liquid and solids, Latent heat, Heat of reaction, formation and combustion, solution and dilution. Energy balance of reactive and non-reactive processes. Unsteady state material and energy balance in bioprocess. Case studies.

BBL231 Molecular Biology and Genetics

4.5 credits (3-0-3)

Pre-requisites: BBL131, BBL132

Historical development and essentials of Mendelian genetics. Chromosomal theory of inheritance. Evolution and development of molecular biology. DNA model and classes. Organization of eukaryotic chromosome – the chromatin structure. Gene structure and Genome. Transposon. Genetic Information and its perpetuation – DNA replication, damage and repair. Telomere and Aging. Transcription, translation. Molecular biology of bacteriophage lambda. Gene exchange in bacteria. Gene regulation in prokaryotes. The operon model – lac, ara, trp operons and gene regulation. Gene Regulation in Eukaryotes. DNA Methylation and Genomic Imprinting.

Laboratory: Isolation of genomic and plasmid DNA, Agarose Gel

Electrophoresis of DNA, Restriction digestion of DNA, RNA isolation, Primer design, PCR, RT-PCR, Competent cell preparation and Transformation, Gene Induction.

BBL331 Bioprocess Engineering

3 credits (3-0-0)

Pre-requisites: BBL132, BBL133

Microbial growth, substrate utilisation, and product formation kinetics; simple structured models; batch, fed-batch, repeated fed-batch, CSTR, CSTR with recycle, multistage CSTRs, and PFR; aeration and agitation; rheology of fermentation fluids; mixing and scale-up; air sterilization; media sterilization; design of fermentation media; aseptic transfer.

BBP332 Bioprocess Engineering Laboratory

1.5 credits (0-0-3)

Pre-requisites: BBL131, BBL132

Laboratory: Design and execution of simple laboratory scale experiments on the following topics: Estimation of cell mass; different phases of microbial growth; Mass and energy balance in a typical bioconversion process; Concept of limiting nutrient and its effect on cell growth; growth inhibition kinetics; product formation kinetics in a fermentation process; aerobic and anaerobic bioconversion process; power consumption in a fermentation process and its correlation with rheology of the fermentation fluid; different agitator types; mixing time in a bioreactor; quantification of K_La in a fermentation process; Heat balance across a batch sterilization process; Assembly and characterization of pH/DO electrodes.

BBL341 Environmental Biotechnology

3 credits (3-0-0)

Pre-requisites: CVL100 and EC 80

Principles and concepts of ecosystem; Energy transfer in an ecosystem; Nutrient cycling; Basics of Environmental Microbiology, Environmental health: Ecotoxicology – Heavy metals, pesticides and their effects, Indices of toxicity, Measurement of pollution (techniques and instrumentation), Dose–response relationship. Microbial biosensors in environmental monitoring, Environmental technologies: Microorganisms and renewable sources of energy, Biodegradation and bioremediation (phyto and microbial), Energy and nutrient recovery during waste treatment, Molecular tools in Environmental Biotechnology, Role of biotechnology in environmental protection.

BBL342 Physical and Chemical Properties of Biomolecules

3 credits (2-1-0)

Pre-requisites: BBL131

Characteristic features of Biological system, Structure-function relationships. Characterization of biomolecules by molecular shape, size and molecular weight. Properties of biomolecules in solution: Diffusion, ultra-centrifugation and electrophoresis. Optical properties of biomolecules; Spectroscopic methods: IR, NMR, Optical rotary and circular dichroism & imaging methods: Bright, darkfield and fluorescence imaging.

BBL343 Carbohydrates and Lipids in Biotechnology

3 credits (2-1-0)

Pre-requisites: BBL131 and EC 60

Introduction, Molecular structure of polysaccharides, Enzymes degrading polysaccharides, Physical properties of polysaccharides, Production of microbial Polysaccharides, Food usage of exopolysaccharides, Industrial Usage of exopolysaccharides, Medical applications of exopolysaccharides Molecular structure of lipids, Physical properties of lipids, Oleaginous microorganisms and their principal lipids, Production of microbial lipids, Modification of lipids for commercial applications, Extracellular microbial lipids and biosurfactants, Micelles and reverse micelles in biology, Liposomes in drug delivery.

BBV350 Special Module in Biochemical Engineering and Biotechnology

1 credit (1-0-0)

BBD351 Mini Project (BB)

3 credits (0-0-6)

Pre-requisites: EC 60

BBL431 Bioprocess Technology

2 credits (2-0-0)

Pre-requisites: EC25

Chemical vs biochemical processing; Substrates for bioconversion processes; Process technology for production of primary and secondary metabolites such as ethanol, lactic acid, citric acid, amino acids, biopolymers, industrial enzymes, penicillin, recombinant glutathione and insulin.

BBL432 Fluid Solid Systems

2 credits (2-0-0)

Pre-requisites: CLL231

Size reduction; crushing and grinding; equipment for size reduction; screening; design procedure; Flow of fluids past a stationary particle for low, medium and high Reynolds numbers; sedimentation and sedimentation theory; thickeners and classifiers; flow through packed beds; flow distribution, packing and pressure drop calculations; fluidization; filtration theory and its application in plate and frame and rotary vacuum filters; solid-liquid separation using centrifugation; '□' concept in centrifugation for scale-up; different types of centrifuges and their design; application for biological suspensions.

BBL433 Enzyme Science and Engineering

4 credits (3-0-2)

Pre-requisites: BBL431

Introduction and scope; Chemical and functional nature of enzymes; Application of enzymes in process industries and health care; microbial production and purification of industrial enzymes; kinetics of enzyme catalysed reactions; immobilization of enzymes; stabilization of enzymes. Bioreactors for soluble and immobilized enzymes, mass transfer and catalysis in immobilized reactors. Enzyme based biosensors; enzyme catalysed process with cofactor regeneration; Enzyme reactions in micro-aqueous medium and non-conventional medium. Laboratory: Assay of enzyme activity and specific activity; kinetic analysis of an enzyme catalysed reaction; Immobilization of enzymes by adsorption and covalent binding; salt precipitation of an enzyme; immobilization of microbial cells by entrapment; effect of water and solvent on the lipase catalysed esterification reaction.

BBL434 Bioinformatics

3 credits (2-0-2)

Pre-requisites: BBL131, BBL132

The topics include introduction to bioinformatics - resources and applications, Biological sequence analysis, sequence alignment, molecular phylogenetic analysis, genome organization and analysis, protein analysis, molecular modeling and drug design.

BBL441 Food Science and Engineering

3 credits (3-0-0)

Chemical constituents of foods, their properties and functions; Characteristic features of natural and processed foods; Chemical/biochemical reactions in storage/handling of foods; Units operations in food processing- size reduction, evaporation, filtration etc.; Methods for food preservation; Rheology of food products; Flavour, aroma and other additives in processed foods; case studies of a few specific food processing sectors, cereals, protein foods, meat, fish and poultry, vegetable and fruit, milk products; legislation, safety and quality control.

BBL442 Immunology

4 credits (3-0-2)

Pre-requisites: BBL131, BBL132, BBL231

Historical background, Innate and acquired immunity. Cells and organs of immune system. Molecules of immune system – immunoglobulins, MHCs, Cytokines, T cell receptors. Generation of antibody and T cell receptor diversity. Complement system. Humoral and Cell

mediated immunity. Immune regulation. Vaccines. Hybridoma. Immunodeficiencies and AIDS. Transplantation immunity and cancer.

BBL443 Modelling and Simulation of Bioprocesses

4 credits (3-0-2)

Pre-requisites: BBL331

Types of kinetic models, Data smoothing and analysis, Mathematical representation of Bioprocesses, Parameter estimation, Numerical Integration techniques, Parameter Sensitivity analysis, Statistical validity, Discrimination between two models. Case studies Physiological state markers and its use in the formulation of a structured model, Development of compartment and metabolic pathway models (Software Probe) for intracellular state estimation. Dynamic Simulation of batch, fed-batch steady and transient culture metabolism, Numerical Optimization of Bioprocesses using Mathematical models.

BBL444 Advanced Bioprocess Control

3 credits (3-0-0)

Pre-requisites: CLL261

The course begins with an overview of classical control theory leading to a detailed analysis of the stability of biological systems. Lyapunov stability is introduced followed by concepts of nonlinear control theory and applications to bioreactors. Control loops in metabolic and protein networks are discussed in the background evolution and motifs selected by natural systems. This leads to the introduction of large protein interaction networks and study of their architectures. Applications of these ideas in apriori analysis of synthetic circuits are examined. The course ends with case studies from the literature.

BBL445 Membrane Applications in Bioprocessing

3 credits (3-0-0)

Milk/cheese processing, Fruit/sugarcane juice processing, Pharmaceuticals/ Therapeutic drugs processing and membrane coupled separation of biomolecules; Membrane based bioreactor for cell/enzyme recycle; Mammalian/plant cell culture; Case studies.

BBL446 Biophysics

3 credits (3-0-0)

Pre-requisites: PYL100, BBL131

Spectroscopic methods in biophysics, conformational changes in biological processes, biological energy conservation and transduction, photosynthesis, transport across biomembranes, the biophysics of motility, the biophysics of the nerve impulse, single molecule biophysical studies.

BBL447 Enzyme Catalyzed Organic Synthesis

3 credits (2-0-2)

Pre-requisites: BBL131 and EC 90

Enzymes as biocatalysts. Various reaction media for enzyme catalyzed reaction [water, water poor media such as organic solvents, ionic liquids] and mixed solvents. Advantages of medium engineering. Fundamentals of non-aqueous enzymology [pH memory, molecular imprinting]. Improving biocatalysis in water and water poor media [chemical modification, immobilization, applications of protein engineering/directed evolution]. Enzyme promiscuity and its applications in organic synthesis. Biocatalytic applications in organic synthesis, hydrolytic reactions, oxidation reduction reactions, formation of C-C bond, addition and elimination reactions, glycosyl transfer reactions, isomerization, halogenation/ dehalogenation reactions.

BBD451 Major Project Part 1 (BB1)

3 credits (0-0-6)

BBD452 Major Project Part 2 (BB1)

8 credits (0-0-16)

BBL731 Bioseparation Engineering

4.5 credits (3-0-3)

Pre-requisites: BBL331, BBL432, BBL433

Characteristics of bio product, flocculation and conditioning of

fermented medium, Revision of mechanical separation (filtration, Centrifugation etc.), cell disruption, Protein precipitation and its separation, Extraction, Adsorption Desorption processes, Chromatographic methods based on size, charge, shape, biological affinity etc., Membrane separations- ultrafiltration and electrodialysis, Electrophoresis, Crystallization, Drying, Case studies. Laboratory: Conventional filtration batch & continuous, Centrifugation in batch and continuous centrifuge, Cell disruption, Protein precipitation and its recovery, Thin Layer Chromatography (TLC), Membrane based filtration- ultrafiltration in cross. Flow modules and microfiltration, electrodialysis, Adsorption Column Studies and Freeze Drying Studies.

BBL732 Bioprocess Plant Design

4 credits (3-0-2)

Pre-requisites: APL100 CLL251 CLL252 BBL331 BBL432

Introduction; General design information; Mass and energy balance; Flow sheeting; Piping and instrumentation; Materials of construction for bioprocess plants; Mechanical design of process equipment; Vessels for biotechnology applications; Design considerations for maintaining sterility of process streams and processing equipment; Selection and specification of equipment for handling fluids and solids; Selection, specification and design of heat and mass transfer equipment used in bioprocess industries; Utilities for biotechnology production plants; Process economics; Bioprocess validation; Safety considerations; Case studies.

Laboratory: Design of the complete process plant for an identified product or service. Each student to choose a separate product/industry

BBL733 Recombinant DNA Technology

3.5 credits (2-0-3)

Pre-requisites: BBL131, BBL132, BBL231 or Masters' degree in Bioscience

Restriction and other modifying enzymes, Cloning vectors (plasmid, (-based, phagemids, high capacity) and expression vectors, Expression in bacterial, yeast and mammalian systems, Construction of genomic and cDNA libraries, DNA Sequencing, Polymerase chain reaction, Invitro mutagenesis, Genome mapping, Stability of recombinant cells in production of biochemicals.

BBL734 Metabolic Regulation and Engineering

3 credits (3-0-0)

Pre-requisites: BBL331, BBL431

Regulatory mechanisms for control of enzyme synthesis - an overview; Control of enzyme activity- proteolysis, covalent modification and ligand binding; Metabolic control theory and metabolic flux analysis; Metabolic regulation of a few major metabolic pathways especially those relevant to bioprocess industries; Pathway engineering; Application of gene cloning in re-directing cellular metabolism for over-production of a few industrial products; Strategies to overcome regulatory mechanisms for over-production of several industrially important primary and secondary metabolites such as alcohols, organic acids, amino acids, enzymes and therapeutic compounds.

BBL735 Genomics and Proteomics

3 credits (2-0-2)

Pre-requisites: BBL231, BBL733

Introduction to -omes and -omics; GENOMICS - Genome sequencing and assembly; Next-generation sequencing; Studying gene expression and function; High throughput gene expression and analysis. PROTEOMICS - Sample preparation; Separation methods; Mass Spectroscopy and de novo sequencing; Comparative Proteomics; Protein-protein interactions.

BBL736 Dynamics of Microbial Systems

3 credits (3-0-0)

Pre-requisites: BBL331, BBL432, BBL433

Stability analysis; analysis of multiple interacting microbial populations;

stability of recombinant cells; Structured models of gene expression and growth, Cell cycle and age-dependent (segregated) models, Single-cell (stochastic) models of gene expression.

BBL737 Instrumentation and Analytical Methods in Bioengineering

3 credits (2-0-2)

Pre-requisites: BBL131

Introduction to methods used in Analytical Bioengineering, Electrophoretic methods, Principles and applications of chromatography (GC, HPLC, FPLC, HPTLC), Spectrophotometry (UV-visible), Fluorescence methods, FTIR, Circular dichroism, Mass spectrometry (GC-MS, LC-MS, ICP-MS), Immunology based analytical methods (ELISA), qPCR, Advanced Microscopy techniques (Electron Microscopy, Confocal Microscopy).

BBL740 Plant Cell Technology

3 credits (2-0-2)

Pre-requisites: BBL331

Special features and organization of Plant cells. Totipotency, regeneration of plants, Plant products of Industrial importance. Biochemistry of major metabolic pathways and products. Autotrophic and heterotrophic growth, Plant growth regulators and elicitors, Cell suspension culture development: methodology, kinetics of growth and production formation, nutrient optimization. Production of secondary metabolites by suspension cultures with a few case studies. Biological and technological barriers-hydrodynamic shear and its quantification, mixing and impeller design aspects. Plant cell reactors: comparison of reactor performances Immobilized plant cell and cell retention reactors. Hairy root induction and their mass propagation in different bioreactor configurations. Use of engineering optimization protocols for enhanced plant metabolite production in the bioreactor.

Laboratory: Development of callus and suspension cultures of plant cells; shear sensitivity; growth and product formation kinetics in suspension cultures; development of hairy root cultures & study of growth kinetics; production of secondary metabolites in bioreactors using suspension cultures/hairy roots/ immobilized cells

BBL741 Protein Science and Engineering

3 credits (3-0-0)

Pre-requisites: BBL131 BBL231 or Masters' degree in Bioscience

Introduction and aim; Basic structural principles of proteins-amino acids; Motifs of protein structure and their packing: alpha domain, alpha/Beta domain, Antiparallel B structures; Protein folding and assembly – protein folding pathways for single and multiple domain proteins; Recovery of active proteins from inclusion bodies; Structure prediction-structural classes, secondary and tertiary protein structure prediction; Sequence homology searches; Strategies for protein engineering – random, site-directed, case studies; Drug-protein interactions and design, Rational protein design.

BBL742 Biological Waste Treatment

4 credits (3-0-2)

Pre-requisites: BBL132, BBL331 or Bachelor's degree in Engineering or Masters' degree in Science

Qualitative and quantitative characterization of wastes; Waste disposal norms and regulations; Indian regulations; Principles of biological treatment; Aerobic and anaerobic biological wastewater treatment systems; Suspended and attached cell biological wastewater treatment systems; Biological nutrient removal; Treatment plant design calculations; Treatment and disposal of sludge; biological means for stabilization and disposal of solid wastes; Treatment of hazardous and toxic wastes; Degradation of xenobiotic compounds; bioremediation. Laboratory: Characterization of wastes; Design calculations for various types of wastes using various types of biological processes.

BBL743 High Resolution Methods in Biotechnology

3 credits (2-0-2)

Pre-requisites: BBL131, BBL331 or Masters' degree in Bioscience

Need for high resolution separation for biologicals; Difficulties with traditional methodologies; Affinity precipitation and partitioning; MF/UF/NF for high resolution separation; chromatography techniques; Affinity chromatography and electrophoresis, Separation by gene amplification (PCR), Molecular imprinting.

BBL744 Animal Cell Technology

4 credits (3-0-2)

Characteristic of animal cell, metabolism, regulation and nutritional requirements; Kinetics of cell growth and product formation and effect of shear force; Product and substrate transport; Perfusion bioreactors, Hollow fiber bioreactor, Operational strategies and integrated approach; Micro and macro carrier culture; Hybridoma technology; Genetic engineering in animal cell culture; Scale-up and large scale operation; Case studies.

Laboratory: Cell culture in static phase (T-flask), quantification of cell growth, monolayer culture, determination of critical shear stress, micro carrier, Cell viability assay. Case studies to understand growth kinetics and product kinetics in actual cell culture system.

BBL745 Combinatorial Biotechnology

3 credits (3-0-0)

Solid phase synthesis, solution phase synthesis, encoding technologies, deconvolution methods, Tools for Combinatorial Biotechnology, Display libraries, Applications.

BBL746 Current Topics in Biochemical Engineering and Biotechnology

3 credits (3-0-0)

Pre-requisites: BBL131, BBL331

BBL747 Bionanotechnology

3 credits (3-0-0)

Pre-requisites: BBL131 or Masters' degree in Bioscience
Introduction, Self-assembly of biomolecules in nanotechnology; Bacterial S-Layer, Biomimetic Ferritin, Biodegradable nanoparticles for drug delivery to cells and tissues, Polymer Nanocontainers, Ion channels as molecular switches, Patch clamp technique, Protein based nanoelectronics, Bacteriorhodopsin and its technical applications, Carbon Nanotubes: Towards next generation biosensors, Molecular Lego: Design for molecular actuators, Biological Membranes, Magnetosomes: Trapping nano-magnetite in biological membranes, Biomolecular Motors, Techniques used in Bionanotechnology Nanoanalytics: Fluorescent Quantum Dots for Biological Labelling, Nanoparticle Molecular Labels.

BBL748 Data Analysis for DNA Microarrays

4 credits (3-0-2)

Pre-requisites: BBL131, BBL231, BBL733

Microarray technology, Basic digital imaging and image processing, Probabilities, common distributions, Bayes' theorem, Analyzing microarray data with classical hypothesis testing, Analysis of variance, Experimental Design, Analysis and visualization tools: Box plots, Scatter plots, Histograms, Cluster Analysis: one-way, two-way, Graphic, Methods for selection of differentially regulated genes, Hypothesis driven experiments using focused microarrays, Biological interpretation, Commercial software available.

BBL749 Cancer Cell Biology

4.5 credits (3-0-3)

Pre-requisites: BBL131 BBL132 BBL231

This course provides students with a deeper understanding of cancer biology and is heavily focused on experiments: Topics include: Cancer Biology Overview, Types of Cancer, Causes for cancer, Oncogenes and Tumor suppressors, Cell Cycle and Regulation, Cell Differentiation, Cell Death Pathways (Apoptosis, Autophagy), Necrosis, Cell Senescence, Cell Adhesion and Motility, Cancer Epigenetics and sRNAs, Cancer Genome instability, Tumor Immunity, Growth Signaling pathways, Tumor angiogenesis, Cancer Stem Cell, Diagnosis, prognosis and treatment of cancer.

Laboratory: Experiments on Cell cycle, Differentiation, Necrosis and Apoptosis, Senescence, Anchorage Independence, Cell Migration and Invasion, MicroRNAs, Stem cell, Fluorescence Microscopy.

BBL750 Genome Engineering

3 credits (2-0-2)

Genome engineering methods for bacteria, yeast, plants and mammalian cells, Newer gene delivery methods, Next generation cloning technologies.

BBD851 Major Project Part 1 (BB5)

6 credits (0-0-12)

BBD852 Major Project Part 2 (BB5)

14 credits (0-0-28)

BBD853 Major Project Part 1 (BB5)

4 credits (0-0-8)

BBD854 Major Project Part 2 (BB5)

16 credits (0-0-32)

Department of Chemical Engineering

CLL110 Transport Phenomena

4 credits (3-1-0)

Vector and tensor analysis. Euler/Lagrangian viewpoint of momentum transport, stress tensor and Newton's law of viscosity, shell momentum balances. Derivation of equations of change for isothermal, non-isothermal, and multicomponent systems. Solutions to 1D flow problems involving Newtonian or non-Newtonian fluids, friction factor. Mechanisms of energy transport, energy flux for conduction, convection and viscous dissipation, solutions to 1D conduction and convection problems. Mechanisms of mass transport, mass and molar diffusion fluxes, derivation and application of continuity equation to mass transfer in binary mixtures. Dimensional analysis of equations of change to solve higher dimensional transport problems. Unsteady-state momentum, heat, and mass transport.

CLL111 Material and Energy Balances

4 credits (2-2-0)

Mathematics and engineering calculations, dimensional groups and constants. Vapour pressure; Clausius-Clapeyron equation, Cox chart, Duhring's plot, Raoult's law. Humidity and saturation, humid heat, humid volume, dew point, humidity chart and its use. Crystallization, dissolution. Ideal gas behavior. Material balance: solving material balance problems with and without chemical reaction, recycle, bypass and purge calculations, aid of computers in solving material balance problems. Energy balance: closed and open systems, heat capacity, calculation of enthalpy changes, energy balances with chemical reaction, heat of vaporization, heat of formation, heat of combination, heat of reaction.

CLL113 Numerical Methods in Chemical Engineering

4 credits (3-0-2)

Overlaps with: MTL107, MTP290, MTL445, CVL734, COL726

Estimation and round-off error calculations. Solution of linear algebraic equations via Gauss elimination, matrix inversion and LU decomposition, Gauss-Seidel method. Solving non-linear algebraic equations with the help of root finding. Numerical integration and differentiation. Solution of ordinary differential equations encountered in initial/boundary value problems via implicit and explicit methods, solution of partial differential equations, Chemical engineering problems where the above mentioned numerical schemes are involved will be illustrated.

CLL121 Chemical Engineering Thermodynamics

4 credits (3-1-0)

Overlaps with: MCL140, MCL141, MCL142

Review of conservation of energy, mass and introduction to work-energy conversions, and the concept of entropy. Application to closed and open systems, application in analysis of energy and efficiency of equipment. State and properties of pure fluids under different conditions and in flow through equipment. Use of equations of states, graphs, correlations and tables to estimate fluid properties, understanding the relationships between fluid properties and changes in properties. Equilibrium properties of pure materials and mixtures. Understanding the phase behaviour and phase transitions of pure fluids. Thermodynamic analysis of fluids in standard fixtures and equipment (piping fixtures, power plants, engines, refrigerators). Equilibrium behaviour of mixtures of fluids, the nature of interactions between various fluids and how interactions affect their properties and phase transitions. Introduction to separation processes based on difference in equilibrium thermodynamic properties. Introduction to reaction equilibria.

CLL122 Chemical Reaction Engineering I

4 credits (3-1-0)

Introduction to rate equations, calculation of conversion in single reaction, kinetics of homogeneous reactions. Derivation of reactor design equations, analysis and sizing of reactors, data collection and plotting to determine rate constants. Reactor networks (series/parallel), concepts of selectivity and yield, reaction mechanisms. Temperature and pressure effects on reactions and reactor design, simultaneous material and energy balances, multiple steady-states. Residence time distributions in non ideal reactors.

CLL133 Powder Processing and Technology

3 credits (3-0-0)

Powder characterization for size, shape, surface area and flowability and relation between them. Characterization techniques: light scattering, light extinction, sedimentation, ultrasonic methods. Powder storage: designing of silos, flow of powders, measurement of flow factors, analytical methods for flow problems in chutes, cyclones and silos, funnel and mass flow. Segregation of powder during flow through chutes and air-induced flows. Segregation during heap formation. Comminution equipment: selection and designing. Particle size control in grinding circuit analysis. Gas-solid separation equipment, application for pollution control.

CLL141 Introduction to Materials for Chemical Engineers

3 credits (3-0-0)

Overlaps with: APL102

Brief introduction to crystalline solids - metals and semiconductors, types of atomic bonding and lattices. Semi-crystalline materials - ceramics, polymers, copolymers, liquid crystals and surfactants. Amorphous and composite systems such as glass, fibers, granular materials, matrices and alloys. Role of materials selection in design, structure-property-processing-performance relationships. Materials characterization via experimental techniques. Special materials like biomaterials and zeolites.

CLL222 Chemical Reaction Engineering II

3 credits (3-0-0)

Pre-requisites: CLL122

Definition of catalysis, homogeneous and heterogeneous catalysis. Adsorption on catalytic surfaces, kinetic models, catalyst preparation, physical characterization of catalysts, supported metal catalysts.

Mass transfer and internal diffusion effects in catalytic reactions, Thiele modulus and effectiveness factor, falsification of kinetics, catalyst deactivation.

Packed bed reactor design, introduction to other multiphase reactors, gas-liquid reactors and enhancement factor. Gas-solid non-catalytic reactions.

CLL231 Fluid Mechanics for Chemical Engineers

4 credits (3-1-0)

Pre-requisites: CLL110

Overlaps with: APL107, APL106, APL105

Introduction to fluids, Forces on fluids, Fluid statics, Hydrostatic force on submerged bodies, Rigid body motion, Kinematics of flow - Eulerian and Lagrangian descriptions, Flow visualization, Integral analysis - mass and momentum balances, Bernoulli equation, Flow through pipes and ducts, Flow measurement, Flow transportation - pumps, blowers and compressors, Differential analysis of flow, Conservation of mass, linear and angular momentum, Navier-Stokes equation, Unidirectional flows, Viscous flows, Skin friction and form friction, Lubrication approximation, Potential flows, Boundary layer theory, Blasius equation for flow over a flat plate, Boundary layer separation, Drag and lift force on immersed bodies, Similitude analysis, Turbulent flows.

CLL251 Heat Transfer for Chemical Engineers

4 credits (3-1-0)

Pre-requisites: CLL110

Overlaps with: MCL242

Modes of heat transfer - conduction, convection, radiation; Heat transfer coefficients in natural and forced convection; Basic conservation equations; Heat transfer with phase change; Design of double pipe heat exchangers, shell and tube heat exchangers and evaporators; Introduction to radiative heat transfer. Unsteady state heat transfer. Two-dimensional heat transfer problems.

CLL252 Mass Transfer I

3 credits (3-0-0)

Pre-requisites: CLL110

Lattice, Fick's, Stefan-Maxwell, Stokes-Einstein and irreversible thermodynamic approaches to diffusivity of binary and multicomponent system. Film theory and other theories of mass transfer. Analogy and correlation approaches to mass transfer coefficients in interphase mass transfer. Analysis of co-current, counter-current and cross flow stage cascades. Design and operating conditions of differential contact equipment such as packed towers for absorption, adsorption, drying and leaching.

CLL261 Process Dynamics and Control

4 credits (3-1-0)

Pre-requisites: MTL100, CLL111

Overlaps with: MCL212, ELL225, ELL205

Introduction to automation, block diagrams; revision of Laplace transform. Modeling based on transfer function approach, open-loop systems: dynamic response of first order systems, first order systems in series, second order systems, and transportation lag. Feedback control: P, PI, PID controllers. Dynamic response of closed loop systems Linear stability analysis: Routh stability criterion, root locus diagrams. Frequency response: Bode diagrams, Nyquist diagrams, Bode and Nyquist stability criterion. Controller tuning: Zeigler-Nichols and Cohen-Coon methods. Introduction to advanced control: feedforward control, cascade control, dead time compensation, ratio control, internal model control.

CLL271 Introduction to Industrial Biotechnology

3 credits (3-0-0)

Pre-requisites: CLL110

Overlaps with: BEN150, BBL431, BBL731

Introduction to biopharmaceutical industry. Monod kinetics. Michaelis-Menten kinetics. Introduction to the different bioprocessing unit operations utilized in production of biotech drugs - upstream, harvest, and downstream. Design, control and scale up of bioreactor. Introduction to analytical methods used for characterization of biotech products and processes (high performance liquid chromatography, mass spectrophotometry, capillary electrophoresis, near infrared spectroscopy, UV spectroscopy). Fundamentals and design of filtration and other membrane based separation techniques. Process chromatography - theory, practice, design and scale-up. Mixing, heat transfer and mass transfer in bioprocessing unit operations. Scale-up of filtration and chromatography unit operations utilized in bioprocessing: procedures, issues that frequently occur and possible solutions. Process design, control and optimization. Current topics in biopharmaceutical technology.

CLL296 Nano-engineering of Soft Materials

3 credits (3-0-0)

Pre-requisites: CLL121

Overlaps with: PYL421

Mathematical characterization of phase transitions in soft matter, e.g. thin films, polymers and colloidal suspensions. Universality in phase separation kinetics. Evolution of order parameter. Time dependent mean field theories (MFTs). Kinetically-driven morphological changes in nano-pattern formation in thin films. Colloidal crystallization and at liquid fronts. Field-induced effects on assembly in complex fluids.

CLP301 Chemical Engineering Laboratory I

1.5 credits (0-0-3)

Pre-requisites: CLL231, CLL251

Practicals in fluid mechanics and heat transfer.

CLP302 Chemical Engineering Laboratory II

1.5 credits (0-0-3)

Pre-requisites: CLL331, CLL252

Practicals in unit operations, mechanical operations, fluid-particle mechanics and principles of mass transfer.

CLP303 Chemical Engineering Laboratory III

1.5 credits (0-0-3)

Pre-requisites: CLL121, CLL122

Practicals in reaction engineering, thermodynamics and chemical processing.

CLL331 Fluid-Particle Mechanics

4 credits (3-1-0)

Pre-requisites: CLL110, CLL231

Introduction to industries dealing with the particles (solid, liquid, gas, soft-materials: colloids, polymer), solid particles: particle size, shape and their distribution, relationship among shape factors and particle dimensions, specific surface area, measurement of surface area and particle size distribution, drag coefficient, packed bed, fluidization.

Sedimentation: settling, hindered settling, design of settling tank, filtration, centrifugal separation, cyclone separator, mixing (solid-solid, solid-liquid and liquid-liquid), segregation.

Size reduction, size enlargement, flow properties of slurries, behaviour of colloidal particles in dispersed condition.

CLL352 Mass Transfer II

4 credits (3-1-0)

Pre-requisites: CLL252

Review of VLE. Separation quantification: separation factor, relative volatility, key components, flash: graphical and algebraic (Richford-Rice) method. Differential distillation, binary distillation: McCabe-Thiele method - minimum reflux, minimum number of stages, open steam, multiple feeds, side streams. Packed columns - HETP, HTU method. Column pressure. Tray efficiency. Column sizing, sieve tray design, packed column design.

LLE - equilibrium diagram, selection of solvent, design calculations for single stage, cascade of stages using Hunter and Nash graphical method, McCabe-Thiele method, continuous contacting.

Multicomponent system: selection of key components, approximate - FUG method, DOF for cascade of stages, MESH formulation, introduction to azeotropic and extractive distillation, adsorption equilibrium, breakthrough curve.

CLL361 Instrumentation and Automation

2.5 credits (1-0-3)

Pre-requisites: CLL261

Signals and standards (pneumatic, voltage, current). Basics of control loop components: sensors, transmitters, transducers, control valves, and converters. Measurement devices for process variables: temperature, pressure, level, flow, pH, humidity, density, and viscosity. Control valves, actuators, positioners; computer-based control systems: PLC, DCS, SCADA.

CLL371 Chemical Process Technology and Economics

4 credits (3-1-0)

Pre-requisites: CLL252, CLL122

Introduction to process flowsheet, equipment symbols and sections of a chemical plant. Use of flowsheeting software. Process synthesis and process flow diagrams of chemical plants (gas-liquid, liquid-solid, gas-liquid-solid handling plants). Fertilizer technology: manufacture of fertilizers including naphtha reforming, air separation, ammonia synthesis technology. Utilities and safety issues in fertilizer plants. Chlor-alkali and sulfuric acid manufacturing. Refining and petrochemical technology: Crude occurrence, properties, distillation, refinery processes and technology, petrochemical technologies. Semiconductor chip manufacturing. food technology. Safety and hazard analysis, and debottlenecking of chemical plants. Introduction to process engineering economics.

CLL390 Process Utilities and Pipeline Design

3 credits (3-0-0)

Pre-requisites: CLL231

Transportation and measurement of utilities like air, water and steam.

Handling of steam. Design of insulation for steam carrying pipes, water hammer. Design of flash tank. Water treatment and reduction of scaling. Storage tank analysis for water. Piping network design, fittings and valves. Air treatment: cleaning and Dehumidification, design of refrigeration and air-conditioning systems. Transportation of air: duct design, selection of blowers and compressors. Instrumentation and control for fluid transportation. Energy audit for industrial air and steam handling systems.

CLL402 Process Plant Design

3 credits (3-0-0)

Pre-requisites: CLL371

Overlaps with: CLL703

Plant layout and flowsheeting. Issues related to materials handling, equipment selection and design (pumps, blowers and compressions, mixers, conveyors, separation columns, reactors), utilities and auxiliaries, offsite facilities. Cost estimation. Selection and detailed design of equipment. Steam handling. Valves, piping and instrumentation. Environmental footprint assessment, pollution reduction, and life cycle analysis of process plant.

CLD411 B. Tech. project

4 credits (0-0-8)

Formulation of the problem. Literature search. Design and fabrication of the experimental setup. Study of experimental techniques in the case of experimental projects. Formulation of equations and analytical/numerical solution in case of modeling projects. Development of software. Analysis of results. Presentation of results and scientific reporting in form of thesis and presentation.

CLD412 Major Project in Energy and Environment

5 credits (0-0-10)

CLD413 Major Project in Complex Fluids

5 credits (0-0-10)

CLD414 Major Project in Process Engineering, Modeling and Optimization

5 credits (0-0-10)

CLD415 Major Project in Biopharmaceuticals and Fine Chemicals

5 credits (0-0-10)

CLL475 Safety and Hazards in Process Industries

3 credits (3-0-0)

Pre-requisites: CLL371

Loss statistics and prevention. Fires and explosions. Hazards related to static electricity. Safety system designs for prevention of fire and explosions. Hazards due to toxicity. Industrial hygiene. Hazards identification and risk assessment methods. Event probability and failure frequency analysis. Case studies.

CLL477 Materials of Construction

3 credits (3-0-0)

Pre-requisites: CLL371

Types and mechanisms of corrosion, factors influencing corrosion. Corrosion testing methods. Combating corrosion in metals and non-metals. High and low temperature materials. Selection of materials of construction for handling different chemicals. Industrial applications and case studies.

CLL701 Modelling of Transport Processes

2 credits (2-0-0)

Fundamentals of momentum transport, Mass and momentum conservation equations and their applications to solve 1-D problems, Fundamentals of heat transport, Equation of energy/temperature and its application to solve problems involving conduction, Fundamentals of mass transport, Equation of mass conservation and its application to solve problems involving binary diffusion.

Introduction to methods for solution of algebraic equations, Methods for solution of ODEs, Functions, approximations and regression analysis, Introduction to Design of Experiments.

CLL702 Principles of Thermodynamics, Reaction Kinetics and Reactors

2 credits (2-0-0)

Introduction to thermodynamics; Notion of equilibrium, states and reversibility; First and Second Laws of Thermodynamics; Equations of state; Equilibrium behaviour of mixtures of fluids; Phase equilibria and VLE; Reaction thermodynamics.

Reaction equilibria and chemical kinetics; Ideal reactors; Isothermal reactor design; Temperature and pressure effects in ideal reactors; Heterogeneous catalysis and effectiveness factors; Fluid-solid non-catalytic reactions.

CLL703 Process Engineering

3 credits (3-0-0)

Process synthesis, material balances and decision making in reactors with recycle streams, input-output structure of flowsheet for batch vs. continuous reactors, hierarchical approach for process engineering design, reactor and separation system selection guidelines, distillation column sequencing, heat exchanger network design, pinch technology, utility selection, grand composite curve, steam and cooling water circuits, integration of heat pumps and heat engines

Process economics: Cost estimation, annuities, perpetuities and present value, tax and depreciation, profitability measures, comparison of equipments and projects, NPV, IRR, risk management.

Process modeling tools: AspenPlus® or Promax that are used in industry for large scale problem solving to undertake problems of current interest.

CLP704 Technical Communication for Chemical Engineers

1 credit (0-0-2)

Technical paper and report writing, Knowledge of leading Chemical Engineering journals and conferences, carrying out literature search, research methodology, paper referencing and critiquing, ethics and plagiarism, improving presentation and communication skills.

CLL705 Petroleum Reservoir Engineering

3 credits (3-0-0)

Pre-requisites: CLL110, CLL121

Introduction of static model including porosity, permeability, compressibility and saturations. Crude oil phase behaviour and their measurement techniques for reservoir and laboratory settings. Meaning and calculation of 'oil in place' numbers with respect to different recovery mechanisms. Material balance for hydrocarbon reservoirs. Pressure transient analysis. Primary, secondary and tertiary recovery mechanisms, Buckley- Leverett theory (fractional flow curves) for immiscible and miscible displacement. Production forecasting and introduction to reservoir simulation.

CLL706 Petroleum Production Engineering

3 credits (3-0-0)

Pre-requisites: CLL231, CLL121

Basic concepts: well drilling, well completions, drive mechanisms for different reservoirs, Darcy's law. Movement of fluids in the well, different artificial lift mechanisms, VLP (vertical lift performance curves), IPR (inflow performance relationships). Well analysis tools (different well performance curves, well logging). Problem identification in wells (examples). Well stimulation techniques.

CLL707 Population Balance Modeling

3 credits (3-0-0)

Pre-requisites: MTL101, CLL331, CLL352

Theory of crystallization. Particle size distribution, particle phase space. Population balance equation for convection in state space (pure growth). Solution of PBE using method of characteristics. PBE

with breakage and coalescence/aggregation terms. Scaling theory and phenomenological models for rate of breakage and coalescence induced by turbulence. Solution of PBE for pure breakage and pure coalescence. Moment transformation of PBE. Numerical approaches to solve PBE. Integrating PBE with transport equations.

CLL720 Principles of Electrochemical Engineering

3 credits (3-0-0)

Volta and Galvani potentials, electrochemical potential, electrochemical equilibrium, Nernst equation. Born-Haber cycle for enthalpy and Gibbs free energy calculation, conventions for ionic species, solvation energy, ionic equilibrium. Electrochemical cell, standard electrode potential, Pourbaix diagram, Donnan potential, reversible electrode. Born model for ion-solvation energy. Ion-ion interactions: Debye-Huckel theory, activity coefficient of ionic solution, ion pair, Bjerrum theory and Fuoss theory. Ionic transport: migration, extended Nernst-Planck equation, electrochemical mobility and its relation with diffusivity, Stokes-Einstein equation, ionic conductivity, transport number, Kohlrausch law. Charged interface: surface excess quantity, Lippmann equation, Gouy-Chapman model, Stern layer, internal and external Helmholtz layer, zeta potential, energy of double layer. Electrokinetic phenomena: Non-equilibrium formulation, diffusion potential, junction potential, Planck-Henderson equation, pH electrode, electrosmosis, electrophoresis, streaming potential, sedimentation potential. Introduction to electrode kinetics: Butler-Volmer formulation, Tafel equation.

CLL721 Electrochemical Methods

3 credits (3-0-0)

Galvani Potential, Butler-Volmer Equation, Tafel Equation. Potential Step voltammetry, pulse voltammetry, cyclic voltammetry. Controlled current methods, current-interrupt measurements. Conductivity relaxation, impedance spectroscopy. Coulometric methods, scanning probe techniques, spectro-electrochemistry.

CLL722 Electrochemical Conversion and Storage Devices

3 credits (3-0-0)

Overlaps with: CLL723

Electrochemical cell, fuel cells, proton exchange membrane fuel cells, solid oxide fuel cells. Batteries, lead acid battery, Nickel-metal hydride (Ni-MH) rechargeable batteries, lithium-ion rechargeable batteries, liquid-redox rechargeable batteries. Electrochemical supercapacitors. Solar cells. Electrodialysis and reverse electrodialysis. Electrochemical hydrogen production and storage.

CLL723 Hydrogen Energy and Fuel Cell Technology

3 credits (3-0-0)

Overlaps with: CLL722

Overview of fuel cells: low and high temperature fuel cells. Fuel cell thermodynamics – heat and work potentials, prediction of reversible voltage, fuel cell efficiency. Fuel cell reaction kinetics – electrode kinetics, overvoltages, exchange currents. Electrocatalysis - design, activation kinetics. Fuel cell charge and mass transport - transport in flow field, electrode and electrolyte. Fuel cell characterization- in-situ and ex-situ characterization techniques, I-V curve, application of voltammetry and frequency response analyses. Fuel cell modeling and system integration. Fuel cell diagnostics. Balance of plant. Different routes of hydrogen generation: electrolysis versus reforming for hydrogen production, solar hydrogen. Hydrogen storage and transportation, safety issues. Cost expectation and life cycle analysis.

CLL724 Environmental Engineering and Waste Management

3 credits (3-0-0)

Overlaps with: CVL100, CVL212, CVL311, CVL312, BBL742

The course covers the concept of ecological balance and the contribution of industrial and human activities in the changes of the environmental quality. Ecological cycles. Concept of pollutants and regulatory measures for the maintenance of environmental quality. Air pollution sources and its dependence on the atmospheric factors,

atmospheric stability and dispersion of pollutants. Control of emission of pollutants using multi-cyclone systems, electrostatic precipitators, bag filters, wet scrubbers for gas cleaning, adsorption by activated carbon etc. Water pollution, its causes and effects. Pollutants and its dispersion in water bodies to predict water quality through modeling. Concept of inorganic and organic wastes and definition of BOD and COD. Control of water pollution by primary treatment and biological treatment systems. Solid waste management systems. Hazardous waste treatment, disposal and storage in engineered landfill.

CLL725 Air Pollution Control Engineering

3 credits (3-0-0)

Pre-requisites: CLL222

Overview of air pollution from mobile and stationary sources. Modeling of emission profile from IC engine. Effect of fuel type and quality and engine performance on air quality. Automotive catalysts and monoliths. Diesel particulate filters and their operation. Selective catalytic reduction. Stationary sources of air pollutants. Household pollutants and control of indoor air quality. Control of pollutants from power plants.

CLL726 Molecular Modeling of Catalytic Reactions

3 credits (3-0-0)

Pre-requisites: CLL222

Sabatier principle. Catalytic cycle, transition state theory. Ensemble effect, defect sites, cluster size effects, metal-support interactions, structural effects, quantum size effects, electron transfer effects. Brønsted-Evans-Polanyi relations. Reactivity of transition-metal surfaces, quantum chemistry of chemical bond, bonding to transition metals, chemisorption.

Kinetics of elementary steps (adsorption, desorption and surface reactions). Reaction on uniform and non-uniform surfaces. Structure-sensitive and non-sensitive reactions on metals.

Electronic structure methods, potential energy surface, Born-Oppenheimer approximation, Hartree-Fock theory, self-consistent field, Kohn-Sham Density Functional Theory, Bloch's theorem and plane wave basis set, exchange-correlation functionals, pseudo-potential. Search for transition state, dimer method, nudged elastic band method, density of states.

Catalysis by metals, oxides, sulfides and zeolites. Aqueous phase heterogeneous catalysis and electrocatalysis.

CLL727 Heterogeneous Catalysis and Catalytic Reactors

3 credits (3-0-0)

Pre-requisites: CLL222

Overlaps with: Basic concepts in heterogeneous catalysis, catalyst preparation and characterization, poisoning and regeneration. Industrially important catalysts and processes such as oxidation, processing of petroleum and hydrocarbons, synthesis gas and related processes. Commercial reactors: adiabatic and multi-tubular packed beds, fluidized bed, trickle-bed, slurry reactors. Heat and mass transfer and its role in heterogeneous catalysis. Calculations of effective diffusivity and thermal conductivity of porous catalysts. Reactor modeling. Chemistry and engineering aspects of catalytic processes along with problems arising in industry. Catalyst deactivation kinetics and modeling.

CLL728 Biomass Conversion and Utilization

3 credits (3-0-0)

Pre-requisites: CLL122

Critical analysis of issues associated with implementing large scale biofuel and biomass energy production. Processes for converting feedstocks to biofuels by thermochemical methods. Biomass conversion catalysis, kinetics and reaction mechanisms, reactor design and scale up issues.

CLL730 Structure, Transport and Reactions in BioNano Systems

3 credits (3-0-0)

Pre-requisites: CLL110

Overlaps with: SBV882, MCL442

Introduction to biology: protein structure, composition, pKa and isoelectric point. Governing equations applied to biological systems: conservation laws, flux equations, mathematical functions and solutions, scaling and order, laminar flow. Electromechanical transport: biomolecular migration through blood capillaries, Poisson-Boltzmann equation in heterogeneous media, electrical-shear stress balance in electrical double layers. Transport across membranes: structure and self-assembly of lipid bilayers, ligand-receptor interactions, membrane permeability, Nernst potential, adsorption isotherms and transport across membrane. Estimation of transport coefficients based on biomolecular interactions. Research-specific case studies incorporating coupled migration through reactive, electrical and heterogeneity considerations.

CLL731 Advanced Transport Phenomena

3 credits (3-0-0)

Pre-requisites: CLL110

Review of fluid kinematics, conservation laws and constitutive equations. Solution methods for equations of change (e.g., unsteady fluid flow in bounded/unbounded geometries). Creeping flow and lubrication approximation. Surface tension driven flows and multiphase flows. Boundary layer theory. Unsteady heat and mass transport. Coupled transport processes-- forced convection heat and mass transport in confined/unconfined flows. Multicomponent energy and mass transport. Turbulence modeling.

CLL732 Advanced Chemical Engineering Thermodynamics

3 credits (3-0-0)

Pre-requisites: CLL121

First and second law of thermodynamics. Application in analysis of energy and efficiency of equipment, flow through equipment. State and behavior of materials, degree of freedom analysis. Material properties as a function of conditions. Relationships between material properties, and changes in material properties. Equilibrium properties of materials: pure materials, and mixtures. A-priori probability postulate, ergodic hypothesis, introduction to microcanonical, canonical and grand canonical ensembles, derivation of physical properties for pure components and mixtures, ideal gas and lattice gas, virial coefficient calculations. Crystal structures, solutions, modeling and analysis of adsorption phenomena, relating them to macroscopic thermodynamics.

CLL733 Industrial Multiphase Reactors

3 credits (3-0-0)

Pre-requisites: CLL122, CLL222

Introduction to advanced reactor analysis tools: RTD theory, RTD based models, axial dispersion, tank-in-series, multizonal models. Hydrodynamics and flow regimes. Transport effects in multiphase reactors, interplay of length and time scales. Process parameters of interest. Effectiveness factors in G/S and L/S systems, including non-isothermal effects. Enhancement factor in G/L systems. Models for non-catalytic heterogeneous reactions. Introduction to multiphase reactors and their applications, classification of multiphase reactors, performance/operating characteristics. Mechanically agitated reactors, bubble column/slurry bubble column reactors, fluidized bed, packed bed, trickle bed reactor reactors. Limitations of models, applications to design of multiphase reactors for specific applications.

CLL734 Process Intensification and Novel Reactors

3 credits (3-0-0)

Pre-requisites: CLL122, CLL222

Introduction to process intensification, possible ways of process intensification and their examples. Introduction to multifunctional reactors/process equipment: reactive distillation, reactor-heat-exchangers. membrane reactors, micro-reactors, structured/monolithic reactors. Intensification of conventional reactors/process equipments, analysis of fluid dynamics and transport effects of intensified reactors. Order of magnitude analysis of reaction rates, heat/mass transfer rates.

Flow patterns in intensified reactors. Design and scale of intensified reactors, fabrication issues. Examples of process intensification.

CLL735 Design of Multicomponent Separation Processes *3 credits (3-0-0)*

Pre-requisites: CLL352

Overview of multi-component separation. Non-ideal solution and properties, equation of state, vapour liquid equilibrium. Multi component separation: Short cut method, rigorous calculations - sum rate, boiling point and Newton's methods, inside-out method for designing of multi-component distillation, absorption and extraction column / contacting devices. Choice of column: tray, random packing and structured packing. Design of adsorption and ion exchange column. Crystallization. Affinity separation and chromatographic separation. Optimal reflux ratio (recycle stream) - operating expenditure versus capital expenditure for all types of columns and contacting devices.

CLL742 Experimental Characterization of BioMacromolecules

3 credits (3-0-0)

Pre-requisites: CLL141, CLL271

Overlaps with: PTL705

Theory and working principles of analytical instruments including high performance liquid chromatography (HPLC), ultra-high performance liquid chromatography (UPLC), capillary electrophoresis (CE), capillary isoelectric focusing (cIEF), gel electrophoresis, circular dichroism (CD) spectroscopy, Fourier transform infrared spectroscopy (FTIR), mass spectroscopy (MS), atomic force microscopy (AFM), scanning electron microscope (SEM), differential scanning calorimetry (DSC), ultraviolet (UV) spectroscopy, surface plasmon resonance (SPR), 2D gel electrophoresis, fluorescence spectroscopy, Zeta-meter, contact angle goniometer, oscillatory drop module (ODM) of goniometer, and quartz crystal microbalance (QCM). Hands-on experience on characterization of proteins. Case studies in biotech industry.

CLL743 Petrochemicals Technology

3 credits (3-0-0)

Pre-requisites: CLL222

Composition of petroleum: laboratory tests, refinery products, characterization of crude oil. Review of petrochemicals sector and Indian petrochemical industries in particular. Feed stocks for petrochemical industries and their sources. Overview of refining processes: catalytic cracking, reforming, delayed coking, Hydrogenation and Hydrocracking, Isomerization, Alkylation and polymerization, purification of gases, separation of aromatics by various techniques. Petrochemicals from methane, ethane, ethylene, acetylene, C3/C4 and higher hydrocarbons. Synthesis gas chemicals. Polymers from Olefins. Synthetic fibers, rubber, plastics and synthetic detergents. Energy conservation in petrochemical Industries. Pollution control in petrochemical industries. New trends in petrochemical industry. Planning and commissioning of a petrochemicals complex.

CLL761 Chemical Engineering Mathematics

3 credits (3-0-0)

Pre-requisites: MTL101, CLL110

Classification, estimation and propagation of errors. Presentation of data. Statistical methods: sample and population distributions, testing of hypothesis, analysis of variance.

Vector spaces, basis, matrices and differential operators. Eigen values, vectors and functions. Solvability conditions for linear equations. Frobenius method for ordinary differential equations. Sturm-Liouville Theorem: Separation of variables and Fourier transform. Green's function and its applications.

CLL762 Advanced Computational Techniques in Chemical Engineering

3 credits (2-0-2)

Pre-requisites: CLL113

Overlaps with: APL703

Introduction to models in Chemical Engineering. Formulation of problems leading to ODEs of initial value types. Stability and stiffness of matrices. Solution of stiff problems like Rober's problem in autocatalytic reactions by Gear's algorithm. Formulation of problems leading to steady state ODEs of boundary value types. Different weighted residual methods to solve BVPs. Orthogonal collocation and Galerkin finite element method. Application to reaction diffusion in porous catalysts pellets under non-isothermal conditions, calculation of effectiveness factor. Moving boundary problems. Transient problems leading to PDEs. Examples in heat and mass transfer and their numerical solution: orthogonal collocation. Monte Carlo method and its applications. Introduction to LBM method to solve fluid flow problems.

CLL766 Interfacial Engineering

3 credits (3-0-0)

Pre-requisites: CLL110, CLL121

Overlaps with: CML103

Concept and definition of interface. Physical surfaces. Surface chemistry and physics of colloids, thin films, dispersions, emulsions, foams, polyaphrons. Interfacial processes such as crystallization, epitaxy, froth flotation, adsorption, adsorptive bubble separation, catalysis, reaction-injection moulding, microencapsulation. Industrial aspects of interfacial engineering.

CLL767 Structures and Properties of Polymers

3 credits (3-0-0)

Pre-requisites: CLL141

Overlaps with: PTL703, PTL701, TTL712

Overview of polymer science and engineering with reference to polymer-solution. Chain dimension: variation of chain dimension with concentration, solvency etc., scaling theory. Molecular weight distribution and its effect on properties of polymer solution. Polymer solution thermodynamics: Flory-Huggins equation and its development, phase separation. Polymer in good, theta and poor solution. Colligative properties of polymer solution. Flow phenomena in polymeric liquids. Material functions for polymeric liquids. General linear viscoelastic fluid: Rouse dynamics, Zimm dynamics. Hyper branched polymer and its physical properties in various solutions. Dynamics of entangled polymers - polymer melt, chain reptation, tube model, chain length fluctuations. Convective constraint release.

CLL768 Fundamentals of Computational Fluid Dynamics

3 credits (2-0-2)

Pre-requisites: CLL113, CLL231

Overlaps with: AML410, MEL807

Review of basic fluid mechanics and the governing (Navier-Stokes) equations. Techniques for solution of PDEs – finite difference method, finite element method and finite volume method. Finite volume (FV) method in one-dimension. Differencing schemes. Steady and unsteady calculations. Boundary conditions. FV discretization in two and three dimensions. SIMPLE algorithm and flow field calculations, variants of SIMPLE. Turbulence and turbulence modeling: illustrative flow computations. Commercial software - grid generation, flow prediction and post-processing.

CLL769 Applications of Computational Fluid Dynamics

3 credits (2-0-2)

Pre-requisites: CLL113

Overlaps with: AML811, MEL818, MEL807

Brief review of CFD for single phase flows. Solution of scalar equations – heat and mass transfer. Application to heat exchanger and stirred tank flows. CFD for multiphase systems – Lagrange-Euler and Euler – Euler approaches. Multiphase models – granular kinetic theory. Reaction modeling. Volume of Fluid (VOF) method for two-phase flow with interfaces. Current status of multiphase flow simulation in various chemical process equipment-bubble column, phase separator, packed bed, fluidized bed, polymerization reactor, cyclones etc.

CLD771 Minor Project

3 credits (0-0-6)

Literature survey, Writing technical report, Planning and execution of the project work within the stipulated time frame.

CLL771 Introduction to Complex Fluids

3 credits (3-0-0)

Pre-requisites: CLL121

Overview of complex fluids: forces, energies, responses and timescales in complex fluids. Types of complex fluids: colloidal dispersions, polymers, gels, liquid crystals, polymer crystals, granular materials, biomolecules. Characterization of structure-property relationships in complex fluids.

CLL772 Transport Phenomena in Complex Fluids

3 credits (3-0-0)

Pre-requisites: CLL110

Overlaps with: PTL707

Classification of fluids under time dependent, time independent and viscoelastic behaviors. Particle level responses: microstructural origins of deformation. Linear and non-linear viscoelasticity. Transport processes in a variety of self-assembling fluids, including surfactant micelles, nano-emulsions, gels, liquid crystalline polymers. Dynamics of rod-like polymers. Static and viscoelastic properties of interfaces. Rheometry and constitutive modeling. Heat transfer in complex fluids: boundary layers. Mixing equipment and its selection.

CLL773 Thermodynamics of Complex Fluids

3 credits (3-0-0)

Pre-requisites: CLL121

Overlaps with: PYL202

Intermolecular forces. Statistical mechanical approach to thermodynamic potentials. Characterization of free energy curves. Entropically driven phase separation, nucleation and spontaneous phase separations in complex fluids. Characterization of structures: Minkowski functionals. Phase separation in confinement. Mean field theories for phase transition, their break-down, introduction to field theory. Thermodynamics of colloidal systems and polymers.

CLL774 Simulation Techniques for Complex Fluids

3 credits (3-0-0)

Pre-requisites: CLL113

Overlaps with: MCL315

Simulation techniques: Molecular Dynamics, Brownian Dynamics, Monte-Carlo, Discrete Element Method and Lattice Boltzmann Simulations. Force fields and interactions. Statistical measures and trajectory analysis to determine structure (e.g., radial distribution function) and properties (e.g., self-diffusivity, shear-dependent viscosity) of complex fluids.

CLL775 Polymerization Process Modeling

3 credits (3-0-0)

Pre-requisites: CLL122

Overlaps with: PTL701

Modeling of step-growth, chain-growth and non-linear polymerization in homogeneous and heterogeneous conditions. Design of CSTR, plug flow, batch and multistep reactors for different polymerization reactions. Control and optimization of polymer reactors, Mathematical modeling and analysis of polymer processing units.

CLL776 Granular Materials

3 credits (3-0-0)

Pre-requisites: CLL331

Overlaps with: CLL133

Continuum mechanics, statistical physics and rigid body dynamics approaches to understand microscopic and macroscopic behavior of

granular materials. Constitutive modeling and rheology of granular materials. Advanced simulation techniques for particle dynamics. Design of flow and handling systems for granular materials.

CLL777 Complex Fluids Technology

3 credits (3-0-0)

Pre-requisites: CLL141

An overview of various technologies based on complex fluids and relate them to fundamental principles of thermodynamics and transport phenomena in complex fluids, e.g., how to manipulate micro-structures and their environment to achieve new products with desired properties. Case studies involving assembly, stability and applications of colloids, emulsions, suspensions, polymer melts and granular materials.

CLL778 Interfacial Behaviour and Transport of Biomolecules

3 credits (3-0-0)

Pre-requisites: CLL110

Overlaps with: CYL669, SBL705, SBV885

Structure of biomacromolecules. Attributes of biomacromolecules: size, charge, hydrophobicity. Characteristics of surface and interfaces: roughness, charge, hydrophobicity. Interactions between biomacromolecules and interfaces: adsorption, specific binding. Aggregation of proteins, modeling of the underlying phenomena. Elasticity of adsorbed macro-molecules at interfaces. Equilibrium and transient description of transport of biomolecules through intra- and extracellular space. Governing equations applied to biological systems: conservation laws, flux equations, Fickian and non-Fickian diffusion, diffusion with reaction/ binding, electrochemical transport. Constitutive laws and solution methods applied to biological systems. Adsorption isotherms and transport across membrane.

CLL779 Molecular Biotechnology and in-vitro Diagnostics

3 credits (3-0-0)

Introduction to the cellular structure and function of biomolecules, theory and experimental characterization of commonly-used laboratory techniques in molecular diagnostic protocols. Identification of the important parameters such as sensitivity, specificity, LOD etc. in the design of a quality system for molecular analyses. Highly sensitive reporter technologies and applications, technologies providing highly dense and bioactive solid phases, novel bioaffinity binders, heterogeneous and homogenous assay concepts, and multiplexed bioassays.

CLL780 Bioprocessing and Bioseparations

3 credits (3-0-0)

Pre-requisites: CLL271

Overlaps with: BEL703, BEL820

Introduction to the different unit operations utilized in production of biotech drugs in the areas of upstream processing, harvest, and downstream processing. Introduction to analytical methods used for characterization of biotech products and processes (high performance liquid chromatography, mass spectrophotometry, capillary electrophoresis, near infrared spectroscopy, UV spectroscopy). Optimization of biotech processes - unit operation specific optimization vs. process optimization, process intensification, statistical data analysis. Scale-up of different unit operations utilized in bioprocessing: procedures, issues that frequently occur and possible solutions.

Good Manufacturing Practices (GMP): need, principles and key practical issues. Process validation: basics, planning and implementation. Industrial case studies in bioprocessing. Current topics in bioprocessing and bioseparations: Quality by Design and Process Analytical Technology.

CLD781 Major Project Part-I

8 credits (0-0-16)

Literature survey, Writing technical report, Planning and execution of the project work within the stipulated time frame.

CLL781 Process Operations Scheduling

3 credits (3-0-0)

Pre-requisites: minimum earned credit of 90 for UG (B.Tech./DD)

Introduction to enterprise-wide supply-chain optimization. Decision making for planning and scheduling. Classification of scheduling formulations: various storage policies, network representations, time representations. Short-term scheduling of batch processes: discrete-time and continuous-time based models. Cyclic and short-term scheduling of continuous processes. Solution of resulting models with industrial applications using GAMS modeling language.

CLD782 Major Project Part-II

12 credits (0-0-24)

Literature survey, Writing technical report, Planning and execution of the project work within the stipulated time frame. Analysis and interpretation of the obtained data.

CLL782 Process Optimization

3 credits (3-0-0)

Pre-requisites: CLL222, CLL352

Overlaps with: MAL210, AML872, MAL704, MAL726, MEL875, SML740, CVL737, CVL886

Introduction to optimization and applications; classification (LP, NLP, MILP, MINLP), convexity, unimodal vs multimodal. Single variable and multivariable unconstrained optimization methods. Linear programming, branch and bound method for MILP. Constrained optimization: nonlinear programming. Necessary and sufficient conditions of optimality. Quadratic programming. Case studies from chemical industry.

CLL783 Advanced Process Control

3 credits (3-0-0)

Pre-requisites: CLL261

Overlaps with: ELL325, ELL723, BBL444

State-space models. Distributed parameter models. Feedforward control. Ratio control. Dead-time compensation. Relative gain array. Z-transforms and digital control. Internal model control. State estimation and process identification. Adaptive control. Non-linear control. Model-based control structures. Synthesis of control systems with case studies. Intelligent control, model predictive control.

CLL784 Process Modeling and Simulation

3 credits (3-0-0)

Pre-requisites: CLL222, CLL352

Introduction to modeling, physical and mathematical models, modeling individual units vs. process. Role of simulation and simulators. Sequential and modular approaches to flowsheet simulation: equation solving approach. Decomposition of networks: tearing algorithms, convergence promotion.

Specific purpose simulation. Dynamic simulation. Case studies using commercial or open source simulation packages.

CLL785 Evolutionary Optimization

3 credits (3-0-0)

Pre-requisites: CLL222

Overlaps with: EEL487, EEL706, EEL878

Traditional vs. nontraditional optimization techniques. Population based search algorithms. Evolutionary strategies. Simulated annealing. Genetic algorithms. Differential evolution. Different strategies of differential evolution. Memetic algorithms. Scatter, Tabu search. Ant-colony optimization. Particle swarm optimization. Self-organizing migrating algorithm. Neural networks. Quantum computing. DNA computing. Multi-objective optimization. Industrial applications.

CLL786 Fine Chemicals Technology

3 credits (3-0-0)

Pre-requisites: CLL222

Introduction to fine and high value chemicals. Historical perspectives. Synthesis methods from chemical (petrochemicals and natural products) and biotechnology routes (enzymatic methods, fermentation and cell culture technology). Extraction of fine chemicals from microorganisms, plant sources and animal sources. Chromatographic separations. Reactor technology for fine chemicals. Scale-up and scale-out of reactors. Microreactor technology and process intensification. Novel high value chemicals for adhesives, electronic materials, food additives, specialty polymers, flavours and fragrances.

CLL791 Chemical Product and Process Integration

3 credits (3-0-0)

Pre-requisites: CLL371

The course will be a structured project based course with initial exposure to industrial processes of understanding Voice of Customers, identifying design specifications, scoping the technology and product landscape and deciding on the technology strategy. Technical and economic feasibility analysis as well as scale-up and manufacturing concerns will also be discussed. Each group will identify a specific product or process of interest and work through these considerations as well as integrate thermodynamics, transport principles, fluid mechanics and reactor design understanding to design the product or process chosen.

CLL792 Chemical Product Development and Commercialization

3 credits (3-0-0)

Pre-requisites: CLL110

Overlaps with: MTL766, MAL719, SML802

Design of experiments - factors, responses, main effects, interactions, different kinds of designs - screening vs. high resolution. Statistical data analysis - applied probability, sampling, estimation, hypothesis testing, linear regression, analysis of variance, types of data plots. Technology transfer of processes - need of technology transfer, key attributes, key challenges, solutions to various issues. Intellectual property management - intellectual property rights, IPR laws, patents, trademarks, designs, copyrights, licensing, IP management. Commercialization of technologies - invention, product development, technical and market feasibility analysis, intellectual property acquisition.

CLL793 Membrane Science and Engineering

3 credits (3-0-0)

Pre-requisites: CLL110, CLL252

Introduction to membrane separation processes, their classification, and applications. General transport theories including theory of irreversible thermodynamics for multicomponent systems. Membrane preparation techniques. Design and analysis and industrial application of various membrane processes such as reverse osmosis, ultra filtration, electrodialysis, dialysis, liquid membrane separation, gas permeation and pervaporation.

CLL794 Petroleum Refinery Engineering

3 credits (3-0-0)

Pre-requisites: CLL222, CLL352

Composition of petroleum, laboratory tests, refinery products, characterization of crude oil. Design of crude oil distillation column. Catalytic cracking, catalytic reforming, delayed coking, furnace design, hydrogenation and hydrocracking, isomerization, alkylation

and polymerization. Lube oil manufacturing. Energy conservation in petroleum refineries. New trends in petroleum refinery operations. Pyrolysis of naphtha and light hydrocarbons.

CLV796 Current Topics in Chemical Engineering

1 credit (1-0-0)

As per declaration of instructor(s).

CLV797 Recent Advances in Chemical Engineering

2 credits (2-0-0)

Pre-requisites: To be declared by Instructor

As per declaration of instructor(s).

CLL798 Selected Topics in Chemical Engineering-I

3 credits (3-0-0)

Pre-requisites: To be declared by Instructor

As per declaration of instructor(s).

CLL799 Selected Topics in Chemical Engineering-II

3 credits (3-0-0)

Pre-requisites: To be declared by Instructor

As per declaration of instructor(s).

CLL833 Experimental Characterization of Multiphase Reactors

3 credits (3-0-0)

Pre-requisites: CLL733

Analytical techniques: Introduction to various analytical techniques e.g. GC, HPLC, UV Spectroscopy, TGA /DTA, FTIR, MS, GCMS, NMR, TOC, CHONS. Principle of measurement techniques, instruments and procedures. Calibration, data processing, analysis and interpretation. Few working demonstrations.

Catalysis characterization: Introduction to various catalysis preparations and characterization techniques, e.g. porosity, surface area, pore volume and pore size distribution (using BET), XRD, SEM, TEM, NMR, AFM, ESCA. Mossbauer spectroscopy, chemisorption, TPD/TPR.

Flow characterization: Introduction to single/multiphase flows/ reactors, role of hydrodynamics. Process parameters of interest, length and time scales, instantaneous vs. time averaged characteristics. Introduction to various advanced intrusive and non-intrusive flow measurement techniques, e.g. mininaturized pressure probes, gamma-ray tomography, densitometry, PIV, RPT, ECT/ERT, high speed photography, tracers and radiotracers.

CLD871 Major Project Part-I

6 credits (0-0-12)

CLD872 Major Project Part-II

14 credits (0-0-28)

CLD881 Major Project Part-I

8 credits (0-0-16)

CLD882 Major Project Part-II

12 credits (0-0-24)

Department of Chemistry

CML100 Introduction to Chemistry

3 credits (3-0-0)

Entropy and free energy changes in chemical processes, chemical equilibria, phase transformations, structure and dynamics of microscopic systems, physical basis of atomic and molecular structure, three-dimensional arrangement of atoms in molecules, structure and reactivity of organic, inorganic and organometallic compounds, basic strategies for synthesis of carbon and silicon containing compounds, coordination chemistry, role of inorganic chemistry in living systems

CMP100 Chemistry Laboratory

2 credits (0-0-4)

Experiments involve the following: Titrations, Surface Tension and Viscosity, Potentiometry, Conductometry, Preparation of metal complexes and important organic compounds, Kinetics, Chromatography, Qualitative and quantitative estimation of organic compounds.

CML102 Chemical Synthesis of Functional Materials

3 credits (3-0-0)

Chemical approaches to the synthesis of functional materials – the design of materials targeting important properties by 'bottom-up' processes that manipulate primary chemical bonds.

Fundamental chemistry principles involved in materials design through synthesis – process methodologies such as self-assembly, sol-gel reactions, synthesis of nanomaterials, etc.

CML103 Applied Chemistry - Chemistry at Interfaces

3 credits (3-0-0)

Unit processes in organic synthesis. Laboratory vs. industrial synthesis. Role of medium in directing synthetic outcomes, organized media. Natural and synthetic constrained systems (inorganic and organic) for control of reactivity in organic reactions. Phase transfer catalysts, polymer and supported reagents for control of reactions. Green Chemistry. Heterogeneous and homogeneous catalysis, surface chemistry, kinetics of catalyzed reactions. Industrial catalysis.

CML511 Quantum Chemistry

3 Credits (3-0-0)

Basic concepts and postulates of quantum mechanics, Hydrogen atom, Quantization of angular momentum, Many electron atoms, Variation theorem, Perturbation theory, Molecular orbital and valence bond theories, Introductory treatment of semi-empirical and ab initio calculations on molecular systems, Density functional theory.

CML512 Stereochemistry & Organic Reaction Mechanisms

3 Credits (3-0-0)

Stereochemistry of acyclic and cyclic compounds including chiral molecules without a chiral centre, Reaction mechanisms (polar and free radical) with stereochemical considerations, Reactive intermediates: generation, structure, and reactivity.

CML513 Photochemistry & Pericyclic Reactions

3 Credits (3-0-0)

Pericyclic reaction, Introduction and classification, Theory of pericyclic reactions: correlation diagrams, FMO, and PMO methods, Cycloadditions reactions, Molecular rearrangements (pericyclic and non-pericyclic), Photochemistry: basics and mechanistic principles, Photochemical rearrangements, Reactivity of simple chromophores.

CML514 Main Group Chemistry

3 Credits (3-0-0)

General properties of p block elements, bonding, historical landmarks, and periodic properties, Introduction to group theory, Chemistry of alkali and alkaline earth metals, Chemistry of group 13, 14, 15, and 16 elements, Halogen chemistry, Chemistry of rare gases.

CML515 Instrumental Methods of Analysis

3 Credits (3-0-0)

Measurement basics and data analysis, Introduction to spectrometric

methods and components of optical instruments, Atomic absorption, fluorescence, emission, mass, and X-ray spectrometry, Introduction to and applications of uv-vis molecular absorption, luminescence, infrared, Raman, nuclear magnetic resonance, and mass spectroscopy/spectrometry, Introduction to electroanalytical methods: potentiometry, coulometry, and voltammetry, Introduction to chromatographic separation: gas, high-performance liquid, supercritical fluid, and capillary electrophoresis chromatography, Introduction to thermal methods of analysis.

CMP511 Laboratory 1

2 Credits (0-0-4)

Experiments highlighting the principles of thermodynamics and chemical equilibrium, electrochemistry, chemical kinetics, spectroscopy, and computer simulations. Examples include: Thermodynamics of micellization, Synthesis, stabilization, and spectroscopy of nanoparticles, Steady-state and time resolved fluorescence, Cyclic and linear sweep voltammetry, Electronic structure calculations, etc.

CMP512 Laboratory 2

2 Credits (0-0-4)

Selected experiments to develop the synthetic, purification, and analytical/characterization skills in different areas of inorganic chemistry, such as, coordination, organometallic, bioinorganic chemistry, and so forth.

CML521 Molecular Thermodynamics

3 Credits (3-0-0)

Basics concepts, Review of first, second, and third laws of thermodynamics, Gibb's free energy, Extra work, Chemical potential, Ideal and non ideal solution, Phase rule, Phase diagram, Solutions, Chemical equilibrium, Postulates of statistical thermodynamics, Ensembles, Monoatomic and polyatomic ideal gases, Molar heat capacities, Classical statistical mechanics.

CML522 Chemical Dynamics & Surface Chemistry

3 Credits (3-0-0)

Kinetics of simple and complex reactions, Transport properties, Theories of reaction rates and dynamics of gas and liquid phase reactions, Experimental techniques to study fast reactions, Photochemical reactions, Surface phenomena and physical methods for studying surfaces, Heterogeneous and homogeneous catalysis.

CML523 Organic Synthesis

3 Credits (3-0-0)

Formation of carbon-carbon bonds including organometallic reactions, Synthetic applications of organoboranes and organosilanes, Reactions at unactivated C-H bonds, Oxidations, Reductions, Newer Reagents, Design of organic synthesis, Retrosynthetic analysis, Selectivity in organic synthesis, Protection and deprotection of functional groups, Multistep synthesis of some representative molecules.

CML524 Transition and Inner Transition Metal Chemistry

3 Credits (3-0-0)

Introduction to coordination chemistry, Crystal field theory, Ligand field theory, Molecular orbital theory, Magnetic and spectral characteristics of inner transition metal complexes, Substitution, Electron transfer and photochemical reactions of transition metal complexes, Physical, spectroscopic, and electrochemical methods used in the study of transition metal complexes, Metal-metal bonded compounds and transition metal cluster compounds, Uses of lanthanide complexes: as shift reagents, as strong magnets, and in fluorescence, Bioinorganic chemistry: introduction, Bioinorganic chemistry of iron: hemoglobin, myoglobin, cytochromes, Bioinorganic chemistry of zinc, cobalt, and copper.

CML525 Basic Organometallic Chemistry

3 Credits (3-0-0)

Organometallic chemistry of main group, transition, and inner transition metals. Synthesis and applications of BuLi, Grignard, organoaluminum, and organozinc reagents, 18 electron rule, Metal carbonyls: bonding and infrared spectra, phosphines and NHC's,

Alkenes and alkynes, carbenes and carbynes (Fisher and Schrock), Hapto ligands with hapticity from 2-8, Oxidative addition and reductive elimination, 1,1 and 1,2-migratory insertions and beta hydrogen elimination, Mechanism of substitution reactions, Fluxionality and hapticity change, Organometallic clusters, C-H activation: agostic and anagostic interactions, Homogeneous catalysis: hydrogenation, hydroformylation, methanol to acetic acid processes, and Wacker oxidation, Introduction to cross coupling and olefin metathesis reactions, Olefin oligomerization and polymerization.

CML526 Structure & Function of Cellular Biomolecules

3 Credits (3-0-0)

Prokaryotic and eukaryotic cells, Structure and function of proteins, carbohydrates, nucleic acids, and lipids. Biological membranes, Enzymes: classification, kinetics, mechanism, and applications. Basic concepts of microbial culture, growth, and physiology.

CMP521 Laboratory 3

2 Credits (0-0-4)

Basic laboratory techniques to synthesize, purify, and characterize small organic molecules by analytical and spectroscopic methods.

CMP522 Laboratory 4

2 Credits (0-0-4)

Determination of enzyme activity in biological samples, Protein purification and characterization, Microbial growth experiments, DNA and RNA isolation, Gel electrophoresis.

CML631 Molecular Biochemistry

3 Credits (3-0-0)

Central dogma, DNA replication and repair, Transcription, Translation, Recombinant DNA technology, Basic concept of metabolism: glycolysis, TCA cycle, β -oxidation, Amino acid transamination and urea cycle.

CMD611 Project Part-I

6 Credits (0-0-12)

CMD621 Project Part-II

10 Credits (0-0-20)

CML661 Solid State Chemistry

3 Credits (3-0-0)

Crystal chemistry, Bonding in solids, Defects and non-stoichiometry, A range of synthetic and analytical techniques to prepare and characterize solids, Electronic, magnetic, and superconducting properties, Optical properties which include: luminescence and lasers, nanostructures and low dimensional properties, etc.

CML662 Statistical Mechanics & Molecular Simulation Methods

3 Credits (3-0-0)

Micro- and macroscopic state of a classical system, Phase space, Ergodicity and mixing in phase space, Theory of ensembles, Classical fluids, Phase transitions and relaxation phenomena, Monte Carlo, molecular dynamics, and Brownian dynamics, Computer simulations, Brownian motion, Langevin equation, Elucidation of structural, dynamic, and thermodynamic properties of complex fluids and soft matter.

CML663 Selected Topics in Spectroscopy

3 Credits (3-0-0)

Franck-Condon principle, Fermi Golden rule, Normal mode analysis, Multi-photon spectroscopy, Molecular beam techniques, Non-linear laser spectroscopy, Two-level systems, Precession, Rabi frequency, Nutation, Bloch equations, Multi-dimensional NMR techniques.

CML664 Group Theory & Spectroscopy

3 Credits (3-0-0)

Symmetry operations, Review of point and space groups, Applications of group theoretical techniques in spectroscopy, Chemical bonding, Crystallography, Theoretical treatment of rotational, vibrational, and electronic spectroscopy, Magnetic spectroscopy.

CML665 Biophysical Chemistry

3 Credits (3-0-0)

Structure and conformations of proteins, nucleic acids and other biological polymers, Techniques for the study of biological structure and function, Configurational statistics and conformational transitions, Thermodynamics and kinetics of ligand interactions, Regulation of biological activity, Bioinformatics: Genomics and proteomics.

CML671 Supramolecular Chemistry

3 Credits (3-0-0)

Non-covalent associations, Molecular recognition, Design and applications of molecular hosts: crown compounds, cyclophanes, cyclodextrins, etc., Nano technology, Molecular clefts, tweezers, and devices, Self assembly and replication.

CML672 Recent Trends in Organic Chemistry

3 Credits (3-0-0)

Recent advances in organic synthesis, spectroscopy, and reaction mechanisms.

CML673 Bio-organic and Medicinal Chemistry

3 Credits (3-0-0)

Bio-organic: Amino acids, polypeptides, and enzyme models, Medicinal: definitions and classifications, Pharmaceutical, pharmacokinetic, and pharmacodynamic phases, Drug-receptor interactions, Intra- and intermolecular forces, Solvent effects, Ligand binding, Docking and design, Drug metabolism.

CML674 Physical Methods of Structure Determination of Organic Compounds

3 Credits (3-0-0)

Applications of UV, IR, NMR, and mass spectral methods in structure determination of organic compounds.

CML675/CML740 Chemistry of Heterocyclic Compounds

3 Credits (3-0-0)

Chemistry of heterocyclic compounds containing one, two, and three heteroatoms, Total synthesis of representative natural products.

CML681 Physical Methods in Inorganic Chemistry

3 Credits (3-0-0)

Use of NMR spectroscopy for structural elucidation of simple inorganic and organometallic compounds using chemical shifts and heteronuclear coupling constants, Relaxation phenomena in inorganic compounds, Double resonance technique and its applications, EPR spectroscopy for the identification of inorganic radicals, Introduction to Mossbauer spectroscopy, Factors influencing chemical shifts and quadrupolar splitting, Structural information: X-ray diffraction methods (powder and single crystal), Finger printing of solids from powder data and determination of crystal structures by Rietveld analysis and single crystal studies.

CML682 Inorganic Polymers

3 Credits (3-0-0)

Homo and heterocatenated inorganic polymers: general introduction, Polyphosphazenes: synthetic routes and bonding features, Polymerization of organo/organometallic substituted phosphazenes and their applications, Polysilanes: synthesis and characterization of polysilanes, unique electronic and optical properties and its applications, Polysiloxanes: precursors used in synthesis of polysiloxanes via anionic and cationic polymerization methods, properties and environmental aspects, Polysiloles and their comparison with polythiophenes, Introduction to organometallic polymers: synthesis of poly(ferrocenylsilane)s and their applications. Catalytic methods for homo and hetero-catenated polymers, Characterization methods (spectroscopy, gel permeation chromatography, differential scanning calorimetry)

CML683 Applied Organometallic Chemistry

3 Credits (3-0-0)

Introduction to homogeneous catalysis, TON and TOF, Some aspects

of commonly used ligands in homogeneous catalysis, such as, CO, amines, phosphines, NHC's, alkenes, alkynes, carbenes, carbynes, etc., Recent developments in hydrogenation and hydroformylation and their asymmetric variations using OM catalysts, Wacker oxidation, Monsanto and Cativa processes, Olefin and alkyne trimerization and oligomerization, Olefin polymerization using Ziegler-Natta, Titanium group metallocenes, Post metallocene late TM catalysts and FI catalysts, Olefin and alkyne metathesis, Grubbs I, II, and III, Schrock, and Schrock-Hoveyda catalysts, Types of metathesis such as RCM, ROM, ROMP, ADMET, and EM. Applications in industry, Palladium and nickel catalyzed cross coupling reactions such as Suzuki, Heck, Sonogashira, Stille, Negishi, Hiyama, Buchwald-Hartwig, decarboxylative cross coupling, and alpha arylation of carbonyls, Fischer Tropsch Process, C-H activation of alkyls and aryls using transition metal complexes, Organometallic polymers, Bio-organometallic chemistry: Vitamin B-12, Planar chirality of metal sandwich compounds and their applications in industry (e.g. Josiphos catalyst), Ferrocene based drugs, Sustainable catalysis for pharmaceuticals and industry using organometallics.

CML684 Bio-Inorganic Chemistry

3 Credits (3-0-0)

Introduction of bio-inorganic chemistry, General properties of biological molecules, Physical methods in bio-inorganic chemistry, Binding of metal ions and complexes to biomolecule active centers, Synthesis and reactivity of active sites, Atom and group transfer chemistry, Electron transfer in proteins, Frontiers of bio-inorganic chemistry: some topics of current research interest.

CML691 Microbial Biochemistry

3 Credits (3-0-0)

Microscopic examination of microorganisms, classification, morphology and fine structure of microbial cells, cultivation, reproduction and growth, pure culture techniques, Basic microbial metabolisms, Concepts of their genetics: transformation, transduction, and conjugation, Important microorganisms and enzymes.

CML692 Food Chemistry and Biochemistry

3 Credits (3-0-0)

Carbohydrates: structure and functional properties of mono-oligo-polysaccharides including starch, cellulose, pectic substances, and dietary fibers, Essential amino acids, proteins, and lipids in food and their impact on functional properties, vitamins and minerals, Food flavours: terpenes, esters, ketones, and quinines; Food additives, Bioactive constituents in food: isoflavones, phenol, and glycosides; Enzymes: enzymatic and non-enzymatic browning, enzymes in food processing, oxidative enzymes, Food biochemistry: balanced diet, PER, anti-nutrients and toxins, nutrition deficiency diseases.

CML695/ CML739 Applied Biocatalysis

3 Credits (3-0-0)

Introduction to enzymes and enzyme catalysed reactions, Classification and mechanism of reaction, Purification and characterization of enzymes, Michaelis-Menten kinetics, Industrial enzymes, Applications of enzymes in diagnostics, analysis, biosensors, and other industrial processes and bio-transformations, Enzyme structure determination, stability, and stabilisation, Enzyme immobilization and concept of enzyme engineering, Nanobiocatalysis.

CML721 Design and Synthesis of Organic Molecules

3 credits (3-0-0)

Selectivity in organic synthesis: chemo-, regio-, stereo- and enantioselectivity. Target-oriented synthesis: Designing organic synthesis, Retrosynthetic analysis, disconnection approach, linear and convergent synthesis. Diversity-oriented synthesis: concept of forward-synthetic analysis, appendage diversity, skeletal diversity, stereochemical diversity, complexity and diversity. Asymmetric Synthesis: Use of chiral catalysts, organocatalysis, chiron approach and N-heterocyclic carbenes. Principles and use of enzymes in the synthesis of industrially important sugar / fatty acid esters, sugar nucleotide derivatives; enantiomeric pure compounds and biobased platform chemicals.

CMP722 Synthesis of Organic and Inorganic

Compounds

3 credits (0-0-6)

Single, double and multi-stage preparation of organic, inorganic and organometallic compounds; experiments involving the concepts of protecting groups and selectivity; identification of compounds through thin-layer chromatography and their purification by column chromatography. Characterization of synthesized compounds using IR, UV, ¹H-NMR and mass spectrometric techniques.

CML723 Principles and practice of NMR and Optical Spectroscopy

3 credits (3-0-0)

Fundamentals of FT NMR spectroscopy, relation between structure and NMR properties, one-dimensional spectroscopy (¹H, ¹³C, DEPT, steady state NOE, saturation transfer) and an introduction to two-dimensional NMR (COSY, NOESY, and HSQC) and their use in structure elucidation. Principles and analytical applications of optical spectroscopic methods including atomic absorption and emission, UV-Visible, IR absorption, scattering, and luminescence.

CML724 Synthesis of Industrially Important Inorganic Materials

3 credits (3-0-0)

Modern methods applied in the synthesis of inorganic, organometallic and polymer materials. Handling of air and moisture sensitive compounds, dry box, glove bag, Schlenk line and vacuum line techniques. Methods of purification of and handling of reactive industrial gases. Methods of purification of inorganic compounds and crystallization of solids for X-ray analysis. General strategies, brief outline of theory and methodology used for the synthesis of inorganic/organometallic molecules to materials including macromolecules. Emphasis will be placed how to adopt appropriate synthetic routes to control shape and size of the final product, ranging from amorphous materials, porous solids, thin films, large single crystals, and special forms of nanomaterials. A few examples of detailed synthesis will be highlighted in each category of materials.

CML726 Cheminformatics and Molecular Modelling

3 credits (3-0-0)

Chemistry & Information technology, chemical / biochemical data collation, retrieval, analysis & interpretation, hypothesis generation & validation, development of structure activity/property relationships, artificial intelligence techniques in chemistry. Building molecules on a computer, quantum and molecular mechanics methods for geometry optimization, Simulation methods for molecules and materials.

CMP728 Instrumentation Laboratory

3 credits (0-0-6)

Experiments based on Instrumental methods of chemical analysis involving spectroscopy, microscopy and thermal methods.

CML729 Material Characterization

3 credits (3-0-0)

Compositional analysis of solid materials by X-ray and electron microscopic techniques. Basic concepts of diffraction techniques (powder and single crystal) in elucidating the crystal structures organic, inorganic and hybrid materials. Applications of electron microscopic techniques (scanning and transmission) for morphological and nanostructural features. Thermal analytical methods for correlating structural information and monitoring phase transition. Emphasis will be placed on the above techniques for industrially important materials and the interpretation and evaluation of the results obtained by various methods.

CML731 Chemical Separation and Electroanalytical Methods

3 credits (3-0-0)

Theory and applications of equilibrium and nonequilibrium separation techniques. Extraction, countercurrent distribution, gas chromatography, column and plane chromatographic techniques, electrophoresis, ultracentrifugation, and other separation methods,

Modern analytical and separation techniques used in biochemical analysis. Principles of electrochemical methods, electrochemical reactions, steady-state and potential step techniques; polarography, cyclic voltammetry, chrono methods, rotating disc and ring disc electrodes, concepts and applications of AC impedance techniques.

CML733 Chemistry of Industrial Catalysts

3 credits (3-0-0)

Fundamental aspects of Catalysis - Homogeneous & heterogeneous catalysis -The role of catalytic processes in modern chemical manufacturing -organometallic catalysts -catalysis in organic polymer chemistry -catalysis in petroleum industry - catalysis in environmental control.

CML734 Chemistry of Nanostructured Materials

3 credits (3-0-0)

Introduction; fundamentals of nanomaterials science, surface science for nanomaterials, colloidal chemistry; Synthesis, preparation and fabrication: chemical routes, self assembly methods, biomimetic and electrochemical approaches; Size controls properties (optical, electronic and magnetic properties of materials) - Applications (carbon nanotubes and nanoporous zeolites; Quantum Dots, basic ideas of nanodevices).

CML737 Applied Spectroscopy

3 credits (3-0-0)

Applications of advanced 1D-NMR techniques such as nOe, 1D 13C-NMR (including APT and DEPT) techniques, multinuclear NMR spectroscopy, 2D NMR techniques (COSY, HETCOR, HSQC, HMBC, NOESY, ROESY etc.) for the structural and stereochemical determination of organic compounds. Introduction to various types of ionizations (such as EI, CI, MALDI, field ionization/desorption, electrospray ionization) and analyzers (such as quadrupole, time of flight, triple quadrupole, QqTOF, ion-trap) in mass spectrometry for MS, MS/MS and MSn applications. Determination of peptide sequencing using mass spectrometric techniques.

CML738 Applications of P-block Elements and their Compounds

3 credits (3-0-0)

Introduction, Structure, bonding and recent discussions on d orbital participation. Boranes, carboranes and metallaboranes and their use in BNCT and as control rods in nuclear reactors, modern electron counting methods such as Jemmis rules, chemistry of B(0) and B(1). GaAs, GaN, InSnO₃: Synthesis and applications in solar cells, LED and as transparent conducting materials. Fullerenes, nanotubes, graphene, silicates, aluminosilicates, zeolites and their applications. Silicones and their industrial applications. Si(II) and Ge(II) chemistry. NHC's and their use in stabilizing main group compounds. Nitrogen based fertilizers, Ammonia, Haber-Bosch Process, nitrogen based explosives, hydrazines as rocket fuels, applications of azides and pentazenium. Phosphorus based fertilizer processes, phosphorus based pesticides, phosphorus-nitrogen compounds as multidentate ligands, superbases, dendrimer cores and polymers. Phosphines and their industrial uses. Frustrated Lewis acid bases as catalysts. Superacids and their uses. Sulphonamides, industrial applications of sulfur and selenium. Fluorine in pharmaceuticals, fluoropolymers.

CML739/695 Applied Biocatalysis

3 credits (3-0-0)

Introduction to enzymes and enzyme catalysed reactions. Classification

and mechanism of reaction. Purification and characterization of enzymes. Michaelis-Menten kinetics, Industrial enzymes. Applications of enzymes in diagnostics, analysis, biosensors and other industrial processes and bio-transformations. Enzyme structure determination, stability and stabilisation. Enzyme immobilization and concept of enzyme engineering. Nanobiocatalysis.

CML740/675 Chemistry of Heterocyclic Compounds

3 credits (3-0-0)

Chemistry of heterocyclic compounds containing one, two and three heteroatoms. Total synthesis of representative natural products.

CML741 Organo and organometallic catalysis

3 credits (3-0-0)

Introduction. Enamine catalysis. Iminium catalysis. Asymmetric proton catalysis. Ammonium ions as chiral templates. Chiral Lewis bases as catalysts. Asymmetric acyl transfer reactions. Ylide based reactions. Transition metal catalyzed reactions. C-H activation. N-Heterocyclic carbenes.

CML742 Reagents in Synthetic Transformations

3 credits (3-0-0)

The course will cover the applications of various oxidation and reduction reactions in organic chemistry with special emphasis on special reagents that are used for selective transformations. Use of organolithium and organoboron compounds in organic synthesis and olefin metathesis will also serve a part of the course.

CMD799 Minor project

3 credits (0-0-6)

CML801 Molecular Modelling and Simulations: Concepts and Techniques

3 credits (3-0-0)

Review of Basic Concepts: Length and Time Scales, Intermolecular Interactions and Potential Energy Surfaces, Evaluation of Long-range interactions Static and Dynamic Properties of Simple and Complex Liquids Molecular Dynamics: Microcanonical and other ensembles; Constrained simulations; non-equilibrium approaches Monte Carlo Methods: Random Numbers and Random Walk, Metropolis Algorithm in various ensembles, Biased Monte Carlo Schemes Free Energy Estimations: Mapping Phase Diagrams, Generating Free Energy Landscapes, Collective Variables Rare Event Simulations and Reaction Dynamics

VII. Advanced Topics: First principles molecular dynamics, Quantum Monte Carlo methods, Coarse-Graining and Multiscale Simulations for Nanoscale Systems, Quantum mechanics/molecular mechanics (QM/MM) approaches. (To some extent, coverage of advanced topics will depend on research interests of students and faculty since this is a Pre-Ph.D. course).

CMD806 Major Project Part-I

6 credits (0-0-12)

CMD807 Major Project Part-II

12 credits (0-0-24)

Department of Civil Engineering

CVL100 Environmental Science

2 credits (2-0-0)

Pollutant sources and control in air and water, solid waste management, noise pollution and control, cleaner production and life cycle analysis, reuse, recovery, source reduction and raw material substitution, basics of environmental impact assessment, environmental risk assessment and environmental audit, emerging technologies for sustainable environmental management, identification and evaluation of emerging environmental issues with air, water, wastewater and solid wastes.

CVL111 Elements of Surveying

4 credits (3-0-2)

Introduction to Surveying, Levels, Theodolites, total station. Measurement of distances, directions and elevations. Traversing. Trigonometric levelling. Mapping and contouring. Measurement of areas, volumes. Quantity computations. Errors of measurements and their adjustments. Curve setting: simple, compound and reverse curves. Introduction to GPS, Differential GPS, Remote sensing techniques and application in land use change and mapping, aerial surveying, photogrammetry.

CVL121 Engineering Geology

3 credits (3-0-0)

Engineering Geology: Introduction; Dynamic Earth; Origin, Age, Interior, Materials of Earth; Silicate Structures and Symmetry Elements; Physical properties, Formation of Rocks ;Igneous, Sedimentary and Metamorphic processes and structures, Characterisation; Weathering Processes; Geological Work of Rivers, Glaciers, Wind and Sea/Oceans, Deposits and Landforms; Formation of Soils; Geological Time Scale; Structural Features, Attitude of beds, Folds, Joints, Faults, Plate tectonics; Stress Distribution; Geophysical methods, Earthquakes. Engineering Properties of Rocks; Rock as Construction Material; Geological Site Criteria for Tunnels and Underground Structures, Foundations, Dams, Rock Slopes and Landslides.

CVP121 Engineering Geology Lab

1 credit (0-0-2)

Pre-requisite : CVL121 or concurrent with CVL121

Geological Maps, Geological Mapping – contouring, topo sheets, outcrops, apparent and true dips, three point problems, depth and thickness problems, joints, faults; Megascopic and Microscopic identification of Minerals and Rocks, Engineering properties of rocks, refraction and resistivity methods, Guided tour through representative geological formations and structures.

CVL141 Civil Engineering Materials

3 credits (3-0-0)

Mechanical properties of engineered materials, Temperature and time effects. Failure and safety. Non-mechanical properties. Durability. Nature of materials, classes of materials based on bonding, inorganic and organic solids. Variability in materials and its implication on measurement. Cement based materials, concrete production and processes; properties. Steel and other metals used in construction. Bricks and Masonry; wood and engineered wood products; glass and heat transmission properties. Polymers for construction and maintenance of infrastructure. Composites: fiber reinforced composites, particle reinforced composites. Introduction to sustainable materials.

CVL212 Environmental Engineering

4 credits (3-0-2)

Pre-requisites: CVL100

Water and wastewater treatment overview; Unit processes: systems of water purification, processes (sedimentation, coagulation-flocculation, softening, disinfection, adsorption, ion exchange, filtration) and kinetics in unit operation of water purification-theory and design aspects; distribution of water layout systems: design aspects; Wastewater engineering: systems of sanitation, wastewater collection systems design and flows;; Characteristics and microbiology of wastewater, BOD kinetics; Unit processes for wastewater treatment

(screening, sedimentation; biological aerobic and anaerobic process)-theory and design aspects; Biological processes (Nutrient and phosphorous removal); advanced wastewater treatment-theory and design aspects; Air pollution (health effects, regulatory standards, dispersion; stacks, control systems); Municipal solid waste management; Noise pollution.

CVL222 Soil Mechanics

3 credits (3-0-0)

Origin and Classification of Soils; Phase Relationships; Effective Stress Principle; Effective Stress Under Hydrostatic and 1D flow; Permeability; Flow Through Soils–Laplace equation, flownets, seepage; Contaminant Transport; Compressibility; Consolidation; Terzaghi's 1D Consolidation Theory; Shear Strength; Drainage Conditions; Pore Water Pressure; Mohr's Circle; Failure Envelope and Strength Parameters; Factors Affecting Shear Strength; Critical State frame work; Behaviour of soils under cyclic loading, Liquefaction,; Compaction; Engineering properties of Natural soils, Compacted Soils and modified soils; Site Investigations; Soil deposits of India.

CVP222 Soil Mechanics Lab

1 credit (0-0-2)

Pre-requisite : CVL222 or concurrent with CVL222

Visual Soil Classification; Water Content; Atterberg Limits; Grain Size Analysis; Specific Gravity; Permeability; standard proctor compaction test, consolidation test, site investigations and introduction to triaxial testing.

CVL242 Structural Analysis I

3 credits (3-0-0)

Pre-requisites: APL100

General Concept of Static Equilibrium of Structures, Concept of Free Body Diagram, Analysis of Statically Determinate Trusses, Energy Methods for Determination of Joint Displacements - Castigliano Theorem, Unit Load Method etc., Introduction to Analysis of Statically Indeterminate Trusses using Energy Methods, Analysis Statically Determinate Beams - Moment Area Theorem, Conjugate Beam Method, Maxwell Betti Theorem, Method of Superposition, Application of Energy Methods to Statically Determinate Beams and Rigid Frames, Solving Simple Indeterminate Beams Structures using Energy Methods, Analysis of Rolling Loads and Influence Line Diagram, Analysis of Arches and cable structures.

CVP242 Structural Analysis Lab

1 credit (0-0-2)

Pre-requisites: CVL242 or Concurrent with CVL242

Determination of forces and displacements in statically determinate and indeterminate trusses, Influence Line Diagram for Trusses, Measurement of bending moment and shear forces in beams, Determination of Elastic Properties of Beams, Verification of the Moment Area Theorem, Maxwell Betti Theorem, Influence Line Diagram for Displacement, Support Reaction, Shear Force at an Intermediate Section and Bending Moment, Determination of Carry over Factor, Verification of Carry Over Factor, Determination of displacements in curved members, Analysis of Elastically Coupled Beams, Determination of horizontal reactions in two and three hinged arches, experiment on cable structures.

CVL243 Reinforced Concrete Design

3 credits (3-0-0)

Pre-requisites: CVL141

Design Philosophy: Working stress and limit state design concepts; Design of and detailing of RC beam sections in flexure, shear, torsion and bond; Design for serviceability; Design of RC beams, One way and two way RC slabs, RC short and long columns, RC footings.

CVP243 Materials and Structures Laboratory Concrete

1.5 credits (0-0-3)

Testing of cement, testing of aggregates, mixture design and testing, non-destructive tests, testing of reinforcement, behaviour of reinforced

concrete beams under flexure and torsion, behaviour of reinforced concrete slabs under uniform and point loads, behaviour of reinforced concrete columns under concentric and eccentric loads.

CVL244 Construction Practices

2 credits (2-0-0)

Pre-requisites: EC35

Introduction and role of technologies, Construction technologies in RC Buildings for Reinforcement, Formwork, and concreting activities, Excavation and Concreting equipment, Formwork material and Design Concepts, Formwork system for Foundations, walls, columns, slab and beams and their design, Flying Formwork such as Table form, tunnel form. Slipform, temporary structures failure, Determining construction loads and ensuring safety of slabs during construction of high rise buildings- shoring, reshoring, preshoring and backshoring technology, Top down construction technology for high rise and underground construction, Bridge construction including segmental construction, incremental construction and push launching techniques, Prefab construction.

CVL245 Construction Management

2 credits (2-0-0)

Pre-requisites: EC35

Introduction to construction projects, stakeholders, phases in a project, Cost estimation from clients perspective, Project selection using time value of money concept, construction contract, cost estimate –contractors perspective, Project planning and network analysis-PERT, CPM, and Precedence Network, Resource scheduling, Time Cost trade off, Time -cost monitoring and control using S-curve and earned value analysis, Construction claims and disputes, and introduction to construction quality and safety.

CVL261 Introduction to Transportation Engineering

3 credits (3-0-0)

Pre-requisites: CVL111

Transportation systems and their classification; Role of transportation with respect to socio-economic conditions; Transportation planning process; Road user and the vehicle; Geometric design of roads: horizontal alignment, vertical alignment, cross-section elements; Relevant geometric design standards; Pavements: flexible and rigid; Characterization of pavement materials; Analysis and design of pavement systems; Pavement design specifications; Pavement construction process; Pavement performance; Traffic engineering: Traffic characteristics; Fundamental relationships; Theories of traffic flow; Intersection design; Design of traffic signs and signals; Highway capacity.

CVP261 Transportation Engineering Lab

1 credit (0-0-2)

Pre-requisites: CVL261 or Concurrent with CVL261

Introduction to material behavior; Characterization of materials used in pavement construction: soil, aggregate, asphalt, asphalt concrete; Introduction to traffic survey methodologies; Traffic surveys: speed studies, intersection study.

CVL281 Hydraulics

4 credits (3-1-0)

Pre-requisites: APL107

Open Channel Flow: Channel Characteristics and parameters, Uniform flow, Critical flow, Specific Energy concepts, Gradually Varied Flows, Rapidly Varied flow with special reference to hydraulic jump, Unsteady flow in open channels.

Boundary Layer Theory: Navier Stokes Equation, Boundary Layer Equation in 2-dimension, Boundary layer characteristics, Integral Momentum equation, onset of turbulence, properties of turbulent flow, skin friction, application of drag, lift and circulation to hydraulic problems.

Pipe Flow: Laminar and Turbulent flow in Smooth and Rough pipes, pipe network analysis, Losses in pipes

Fluvial Hydraulics: Settling velocity, Incipient motion, Resistance to flow and bed forms, Sediment load and transport.

CVP281 Hydraulics Lab

1 credit (0-0-2)

Pre-requisites: CVL281 or Concurrent with CVL281

Experiments on Open Channel Flow Hydraulics, Boundary Layer Theory, Pipe flow, Sediment transport.

CVL282 Engineering Hydrology

4 credits (3-0-2)

Pre-requisites: APL107

Hydrologic Cycle, Processes and Applied Methodologies. Rainfall; Evapotranspiration; Infiltration;

Groundwater: Occurrence, Movement, Governing equations, Well hydraulics.

Runoff: Hydrograph, Unit Hydrographs; Streamflow measurement.

Flood Routing: Hydrological routing for reservoirs and channels.

Frequency Analysis.

CVL284 Fundamentals of Geographic Information Systems

3 credits (2-0-2)

Pre-requisites: COL100

What is GIS. Geographic concepts for GIS. Spatial relationships, topology, spatial patterns, spatial interpolation. Data storage, data structure, non-spatial database models. Populating GIS, digitizing data exchange, data conversion. Spatial data models, Raster and Vector data structures and algorithms. Digital Elevation Models (DEM) and their application. Triangulated Irregular Network (TIN) model. GIS application areas, Spatial analysis, quantifying relationships, spatial statistics, spatial search. Decision making in GIS context.

CVL311 Industrial Waste Management

3 credits (3-0-0)

Pre-requisites: CVL212

Definitions, source and types of air and noise pollution, physical and chemical properties of air pollutants, secondary pollutants formation, instrument design and industrial application, gas phase adsorption and biofiltration, carbon credit, global warming potential, case studies, data analysis, interpretation.

CVL312 Environmental Assessment Methodologies

3 credits (3-0-0)

Pre-requisites: CVL212

industrial waste types and characteristics; levels of environmental pollution due to industrial wastes; health issues due to industrial wastes; ecological and human health risk assessment due to industrial wastes; waste characterization methods; treatment methods-conventional and recent trends (for air, water, soil media); Prevention versus control of industrial pollution; hierarchy of priorities for industrial waste management; comparison of real-life industrial waste management practices (ex: superfund remedial sites, etc.); economics of industrial waste management and sustainability issues; environmental rules and regulations; clean up goals; disposal/reuse of treated wastes; Source reduction and control of industrial water and air pollution; Minimization of industrial solid and hazardous waste; Waste management case studies from various industries.

CVL313 Air and Noise Pollution

3 credits (3-0-0)

Pre-requisites: CVL212

Environmental issues related to developmental activities: Nature and characteristics of environmental impacts of urban and industrial developments.

Linkages between technology, environmental quality, economic gain, and societal goals.

Environmental indices and indicators for describing affected

environment. Methodologies and environmental systems modeling tools for prediction and assessment of impacts on environmental quality (surface water, ground water, air, soil).

Monitoring and control of undesirable environmental implications. Environmental cost benefit analysis. Decision methods for evaluation of environmentally sound alternatives.

Environmental health and safety: Basic concepts of environmental risk and definitions; Hazard identification procedures; Consequence analysis and modeling (discharge models, dispersion models, fire and explosion models, effect models etc.).

Emerging tools for environmental management: Environmental Management Systems, Environmentally sound technology transfer, emission trading, international resource sharing issues, climate change, international environmental treaties and protocols. Case studies.

CVL321 Geotechnical Engineering

4 credits (3-1-0)

Pre-requisites: CVL222

Foundations: types, selection and design considerations; Bearing capacity of shallow foundations: Terzaghi theory, factors affecting; Bearing capacity of deep foundations: single pile analysis, pile tests, pile driving formula, group capacity, introduction to laterally loaded piles; Settlement of shallow and deep foundations: stress distribution, immediate and consolidation settlements; Slope stability analysis: infinite slopes, method of slices, Swedish circle method; Earth dams: types and design aspects; Earth pressure analysis: Rankine and Coulomb methods; Earth retaining structures: types, design aspects, underground structures; Earthquake geotechnics: evaluation of liquefaction potential, seismic slope stability, seismic bearing capacity; Machine foundations: types, analysis, design procedure; Ground improvement techniques: types, deep stabilization, anchorage, grouting; Geosynthetics: types, functions, properties; reinforced soil walls; Geoenvironment: Landfills - types, liner, cover, stability; Ash ponds - stage raising, design aspects.

CVP321 Geotechnical Engineering Lab

1 credit (0-0-2)

Pre-requisites: CVL321 or Concurrent with CVL321

Vane shear test, Direct shear test, Specimen preparation, Unconfined compression test, Unconsolidated undrained test, Consolidated drained test, Consolidated undrained test with pore water pressure measurement.

CVL341 Structural Analysis II

3 credits (3-0-0)

Pre-requisites: CVL242

Determinacy and stability; Method of consistent deformations-Matrix formulation, Application to beams, trusses and frames; Slope-deflection method and Moment-distribution method- Beams and frames with uneven loading, support settlements, dealing with symmetry and anti-symmetry, Non-sway and sway frames; Matrix stiffness method; Matrix flexibility method; Energy methods; Approximate methods of analysis; Direct stiffness method for computer applications including computational aspects and MATLAB Assignments.

CVL342 Design of Steel Structures

3 credits (3-0-0)

Pre-requisites: CVL242

Structural steel and properties, Design philosophy-Working stress and limit state; Connection types- Riveted, bolted and welded; Design of tension, compression and flexural members; Design of members subjected to combined loadings-Axial and bending, Torsion, Biaxial bending; Column bases, Gantry and plate girders; Roof trusses; Plastic design; Introduction to stability concepts, Design of shed-type structures.

CVP342 Materials and Structures Laboratory-Steel

1 credit (0-0-2)

Basic properties of structural steel; Tensile stress-strain behaviour; Buckling of slender columns, Flexural testing of beams; Torsional

behaviour of beams, Unsymmetrical bending; Lateral-torsional buckling; Flexural-torsional buckling; Connection behaviour; Tension-field action in plate girders.

CVL344 Construction Project Management

3 credits (3-0-0)

Pre-requisites: CVL245

Additional network analysis- Ladder Network, LoB,etc., Time constrained Resource allocation and resource constrained problems, Time Cost trade off, project updating and control using EVM, Construction contracts and its types, tendering procedure, estimation and fixing of markup, bidding models, claims compensation and disputes, dispute resolution models, FIDIC contracts, Linear programming, Problems in construction, Formulation, Graphical solution, Simplex method, Dual problem, sensitivity analysis and their application to Civil engineering, Transportation Assignment problems and their applications

CVL361 Introduction to Railway Engineering

3 credits (3-0-0)

Pre-requisites: CVL261

History: Indian railways, international perspective; Railway track gauge: factors affecting gauge choice, multi gauge; New project planning and surveys; Alignment of railway track; Structure of railway track: rails, sleepers, ballast, subgrade, track fittings; Structural design of railway track: stresses, creep; Geometric design of rail track: gradients, curves, superelevation; Locomotives and rolling stock: resistance and tractive power; Points and crossings; Railway stations and yards; Traffic control; Signalling and interlocking; Public rail transportation in metros.

CVL381 Design of Hydraulic Structures

4 credits (3-0-2)

Pre-requisites: CVL281 and CVL282

Input studies.

Storage structures: Dams and reservoirs, Different types of dams and selection of suitable type and dam site, Gravity dam, Embankment dams. Diversion works: Design concepts for irrigation structures on permeable foundations, Design of Weirs and barrages. Design of energy dissipation devices. Canals: canal layout, Regime canal design, Rigid boundary canal design. Design of canal falls. Design of cross drainage works. Design of head regulator, cross regulator and canal outlet structures.

CVL382 Groundwater

2 credits (2-0-0)

Pre-requisites: CVL282 or EC 75

Introduction, importance and occurrence of groundwater; Aquifers and groundwater scenario in India; Surface and subsurface investigation of groundwater; Construction, development and maintenance of wells; Flow through porous media, Darcy's law, regional flow; Well hydraulics; Groundwater management.

CVL383 Water Resources Systems

2 credits (2-0-0)

Pre-requisites: CVL282

Water Resources Planning Purposes and Objectives; Multi-component, multi-user, multi-objective and multi-purpose attributes of an Integrated Water Resources System; Economic basis for selection of a Plan Alternative; Introduction to Linear Programming and applications in Water Resources Engineering; Linear, Deterministic Integrated Water Resources Management Model on River Basin Scale.

CVL384 Urban Hydrology

2 credits (2-0-0)

Pre-requisites: CVL282 or EC 75

Distinctive characteristics of natural and urban watersheds; Urban

Heat Island; Changes in rainfall, infiltration and runoff characteristics in urban watershed; IDF relationship and its adaptation for urban settings; Adjusting runoff record for urbanization; Stormwater Management and rainwater harvesting; Urban drainage: layout, structures, flooding and control, combined sewer overflows, sedimentation; Management of stormwater.

CVL385 Frequency Analysis in Hydrology

2 credits (2-0-0)

Pre-requisites: CVL282

Concepts of probability in Hydrology, Random events, Random variables; moments and expectations; Common probabilistic distributions; goodness of fit tests; Stochastic processes.

CVL386 Fundamentals of Remote Sensing

3 credits (2-0-2)

Pre-requisites: EC 75

What is Remote Sensing? Historical development of remote sensing, Remote sensing components, Data collection and transmission, Sensors and satellite imageries, Electromagnetic energy and spectrum, Wavebands, Interactions of electromagnetic energy with atmosphere and earth's surface, radiometric quantities, Photogrammetry and aerial photography, Vertical and tilted photographs, Photographic materials, Photo-processes, Stereoscopic viewing, fly view, Aerial mosaics, Various satellite systems and monitoring programs, Data Products, Satellite data, Data formats, Data acquisition for natural resources management and weather forecast, Random errors and least square adjustment, Coordinate transformation, Photographic interpretation, Image processing, Potential applications of remote sensing in diverse areas and decision making, Integrated use of remote sensing and GIS, Case studies.

CVD411 B.Tech. Project Part-I

4 credits (0-0-8)

CVD412 B.Tech. Project Part-II

6 credits (0-0-12)

CVL421 Ground Engineering

3 credits (3-0-0)

Pre-requisites: CVL321

Planning of investigation programmes, Geophysical methods. Methods of site investigations: Direct methods, semi-direct methods and indirect methods, Drilling methods. Boring in soils and rocks, Methods of stabilizing the bore holes, measurement of water table, field record. Principles of compaction, Laboratory compaction, Engineering behaviour of compacted clays, Field compaction techniques- static, vibratory, impact, Compaction control. Shallow stabilization with additives: Lime, flyash, cement and other chemicals and bitumen; Deep Stabilization: sand column, stone column, sand drains, prefabricated drains, electroosmosis, lime column. soil-lime column, blasting. Grouting : permeation, compaction and jet. Vibro-floatation, dynamic compaction, thermal freezing. Dewatering systems. Functions and applications of geosynthetics – geotextiles, geogrids, geomembranes; soil reinforcement using strips, bars and geosynthetics; soil nailing and ground anchors, Earthmoving machines and earthwork principles, Piling and diaphragm wall construction, Tunneling methods in soils, Hydraulic barriers and containment systems for waste disposal in soil, Control and remediation of soil contamination.

CVL422 Rock Engineering

3 credits (3-0-0)

Pre-requisites: CVL321

Geological classification, rock and rock mass classification, strength and deformation behaviour of rocks, pore pressures, failure criteria, laboratory and field testing, measurement of in-situ stresses and strains, stability of rock slopes and foundations, design of underground structures, improvement of in situ properties of rock masses and support measures.

CVL423 Soil Dynamics

3 credits (3-0-0)

Pre-requisites: CVL321

Engineering problems involving soil dynamics; Role of inertia; Theory of Vibrations: Single and two-degree freedom systems; Wave propagation in elastic media; Soil behaviour under cyclic/dynamic loading; Small and large strain dynamic properties of soils; Design criteria for machine foundations; Elastic homogeneous half space and lumped parameter solutions; Vibration isolation; Codal provisions; Causes of Earthquakes; Strong Ground Motion: Measurement, characterization and estimation; Amplification theory and ground response analysis; Liquefaction of soil and its remediation; Seismic slope stability; Seismic bearing capacity and earth pressures

CVL424 Environmental Geotechniques & Geosynthetics

3 credits (3-0-0)

Pre-requisites: CVL321

Causes and effects of subsurface contamination; Waste disposal on land; Characteristics of solid wastes; Waste Containment Principles; Types of landfills; Planning of landfills; Design of liners and covers for landfills; Environmental Monitoring around landfills; Detection, control and remediation of subsurface contamination; Geotechnical re-use of solid waste materials.

Types of geosynthetics; Manufacturing; Functions; Testing and evaluation; Designing with geotextiles, geogrids, geonets and geomembranes.

CVL431 Design of Foundations & Retaining Structures

3 credits (3-0-0)

Pre-requisites: CVL321

Shallow Foundations: Bearing Capacity, Generalized bearing capacity theory, Empirical methods, Layered soil, Foundations on or near slopes, Settlement of foundations, codal provisions.

Pile Foundations: Types and their selection, Ultimate load of individual piles in compressive, uplift, and lateral loading, Pile load tests, Downdrag, Pile groups. Caissons. Codal provisions.

Earth Retaining Structures: Types, Earth pressures, Design of rigid, flexible and reinforced soil retaining walls, braced excavations, and ground anchors for retaining walls.

Introduction to design of foundation for dynamic loads.

CVL432 Stability of Slopes

2 credits (2-0-0)

Pre-requisites: CVL321

Slope Stability: Short term and long term stabilities; Limit equilibrium methods; Infinite slopes; Finite height slopes - Swedish method, Bishop's simplified method, Stability charts; Conditions of analysis - steady state, end of construction, sudden draw down conditions; Factor of safety; Codal provisions; Earthquake effects. Seepage Analysis: Types of flow; Laplace equation; Flownet in isotropic, anisotropic and layered media; Entrance-exit conditions; Theoretical solutions; Determination of phreatic line. Earth Dams: Introduction; Factors influencing design; Design of components; Instrumentation. Reinforced Slopes: Steep slopes; Embankments on soft soils; Reinforcement design.

CVL433 FEM in Geotechnical Engineering

3 credits (3-0-0)

Pre-requisites: CVL321

Steps in FEM. Stress-deformation analysis: One dimensional, Two dimensional and Three-dimensional formulations. Discretization of a Continuum, Elements, Strains, Stresses, Constitutive, Relations, Hooke's Law, Formulation of Stiffness Matrix, Boundary Conditions, Solution Algorithms.

Settlement Analysis, 2-D elastic solutions for homogeneous, isotropic medium, Steady Seepage Analysis: Finite element solutions of Laplace's equation, Consolidation Analysis: Terzaghi consolidation problem, Choice of Soil Properties for Finite Element Analysis, Introduction to PHASE2.

CVP434 Geotechnical Design Studio

2 credits (0-0-4)

Pre-requisites: CVL321

Seepage analysis through an earth dam. Slope stability analysis of a dam. Settlement analysis of shallow and deep foundations; Analysis and design of retaining structures; Analysing the structural forces in a tunnel lining.

CVL435 Underground Structures

2 credits (2-0-0)

Pre-requisites: CVL321

Overlaps with: CVL713

Types and classification of underground structures, Functional aspects, Sizes and shapes, Support systems, Design methodology.

Stresses- deformation analysis of openings (circular, elliptical, spherical, ellipsoidal) using analytical and numerical methods

Design of underground structures using analytical methods, empirical methods and observational methods, Rock support interaction analysis, NATM Hydraulic tunnels, Shafts, Tunnel portals, Metro tunnels.

CVL441 Structural Design

3 credits (3-0-0)

Pre-requisites: CVL241, CVL243, CVL342

Design of Reinforced Cement concrete (RCC) Structures – Building frames Liquid retaining structures, Earth Retaining walls,

Design of Steel Structures – Plate girders, gantry girders and steel bridge components

CVP441 Structural Design & Detailing

1.5 credits (0-0-3)

Pre-requisites: CVL243, CVL342

Part-I Concrete Structures

Computer-aided analysis and design of real-life reinforced concrete (RC) structure. Dimensioning of concrete elements based on modular formworks available in construction industry. Detailing of concrete elements in terms of reinforcement, curtailment, lapping, splicing of reinforcements and connection with adjoining elements in the structure; member drawings. Joint detailing from ductility view point, Indian standard (IS) code recommendations and practical intricacies involved in casting and handling of the RC members, its sequence of construction and constructability.

Part-II Steel Structures

Computer-aided analysis and design of real-life steel structure. Steel member details as per shop/ field activities for welding/ bolting; i.e. fabrication (shop) drawings. Connection details, gusset plate design and detailing from ductility view point, Indian standard (IS) code recommendations and practical intricacies involved in fabrication and handling of the steel members, its sequence of erection and constructability.

CVL442 Structural Analysis-III

3 credits (3-0-0)

Pre-requisites: CVL341

Introduction to FEM for structural analysis with review of energy methods-2D plane stress and plane strain elements, beam element, 2D bending element, example problems, elements of structural dynamics-free and forced vibration of SDOF system, treatment of impact and arbitrary loading, frequency and time domain analysis; free vibration mode shapes and frequencies of MDOF systems; normal mode theory

for forced vibration analysis of MODF system; example problems. Elements of plastic analysis; upper and lower bound theorems; methods of collapse mechanism; application to beams and multistory frames; example problems.

CVL443 Prestressed Concrete & Industrial Structures

3 credits (3-0-0)

Prestressed Concrete Structures-Fundamentals of presenting, Prestressing technology, Analysis of prestressed losses, Design for Flexure, Design for shear and torsion, Design of anchorage Zones in Post-tensioned members.

Industrial Structures-Analysis and design of Cylindrical shell structures, Folded plates, Chimneys, Silos, Bunkers.

CVL461 Logistics and Freight Transport

3 credits (3-0-0)

Overlaps with: SML843

Pre-requisites: CVL261 or Instructor's permission

Evolution of freight and logistics; Interrelationships between society, environment and freight transport; Survey methodologies to understand freight movement; Cost measurement: Production, Holding, Transportation, Handling; Effect of internal and external variables on cost; Demand forecasting; Inventory planning and management; Transportation and distribution network: Design, Development, Management; Ware house operations; Pricing: Perishable, seasonal demand, uncertainty issues; Vehicle routing: One-to-one distribution, One-to-many distribution, Shortest path algorithm, Quickest time algorithm; Logistics information system; Designing and planning transportation networks; Multi-modal transportation issues.

CVL462 Introduction to Intelligent Transportation Systems

3 credits (3-0-0)

Pre-requisites: CVL261

Introduction to Intelligent Transportation Systems (ITS); ITS Organizational Issues, the fundamental concepts of Intelligent Transportation Systems (ITS) to students with interest in engineering, transportation systems, communication systems, vehicle technologies, transportation planning, transportation policy, and urban planning. ITS in transportation infrastructure and vehicles, that improve transportation safety, productivity, environment, and travel reliability. Mobile device applications of ITS such as trip planners.

CVL481 Water Resources Management

3 credits (3-0-0)

Pre-requisites: CVL282 and EC 100

Scope of water resources management, Global trends in water utilization, Crop water requirements and irrigation, Planning and design of various irrigation methods, Soil salinity and water logging, Hydropower systems management, Storm water system management, Economic analysis of water resources projects, Flood Control studies.

CVL482 Water Power Engineering

3 credits (2-0-2)

Pre-requisites: CVL281 and EC 100

Basic principle of hydropower generation, Hydropower Project Planning, Site selection, Hydropower development schemes, Reservoir storage, Assessment of power potential, Hydrologic analysis: Flow duration and load duration curves, Dependable flow, Design flood, Reservoir operation; Hydraulic design of various components of hydropower plants: intakes, hydraulic turbines, conduits and water conveyance, penstock; Performance characteristics of turbines, Specific and unit quantities, Electrical load on hydro-turbines, Power house dimension and planning, Water hammer and surge analysis, Surge tanks, Small and micro hydro power development, tidal plants, Current scenarios in hydropower development, Project feasibility, Impact of hydropower development on water sources systems, environment, socioeconomic conditions and national economy.

CVL483 Groundwater & Surface-water Pollution

2 credits (2-0-0)

Pre-requisites: CVL282 and EC 100

Groundwater contamination; River and Lake pollution; Pollution sources, Geogenic and anthropogenic pollution; Soil Pollution; Contaminant transport mechanisms; Pollution control, remediation technologies and role of wetlands. Environmental impact assessments, Hydrological impacts, Vulnerability, Case studies.

CVL484 Computational Aspects in Water Resources

3 credits (1-0-4)

Pre-requisites: CVL281 and EC 100

Numerical Interpolation and Integration and application to water resources problems; Numerical solution of differential equations in Water Resources such as groundwater flow, pipe flows, open channel flows.

CVL485 River Mechanics

3 credits (2-0-2)

Pre-requisites: CVL281 and EC 100

Introduction, river morphology, drainage patterns, stream order. Properties of mixture of sediment and water, Incipient motion and quantitative approach to incipient motion, channel degradation and armoring. Bed forms and resistance to flow, various approaches for bed load transport, suspended load profile and suspended load equations, total load transport including total load transport equations. Comparison and evaluation of sediment transport equations. Stable channel design with critical tractive force theory.

CVL486 Geo-informatics

3 credits (2-0-2)

Pre-requisites: EC 100

Geospatial and temporal data, Data acquisition, Global positioning system, Global Navigational Satellite System, GPS survey, Aerial and laser scanning surveys, Data acquisition using remote sensing techniques, Sensors and satellite imageries, Stereoscopic 3D viewing, Fly view, Satellite data formats and specifications, Data acquisition for natural resources management and weather forecast, Image processing and interpretation, GIS concepts and Spatial data models, Introduction to microwave remote sensing & LiDAR, Geospatial analysis, DEM/DTM generation & 3D modelling, Inferential statistics, Spatial interpolation, Integrated use of geospatial technologies, Applications and case studies.

CVD700 Minor Project

3 credits (0-0-6)

CVL700 Engineering Behaviour of Soils

3 credits (3-0-0)

Origin, nature and distribution of soils. Description of individual particle. Clay mineralogy, clay-water-electrolytes. Soil fabric and structure. Effective stress principle. Steady state flow in soils. Effect of flow on effective stress. Determination of coefficient of permeability. Consolidation: one, two, three dimensional and radial consolidation. Various consolidation tests and determination of parameters. Stress-path. Triaxial and direct shear tests. Shear behaviour of soils under static and dynamic loads. Factors affecting shear behaviour. Determination of parameters. Shear behavior of fine grained soils. Pore-pressure parameters. UU, CU, CD tests. Total and effective stress-strength parameters. Total and effective stress-paths. Water content contours. Factors affecting strength : stress history, rate of testing, structure and temperature. Anisotropy of strength, thixotropy, creep. Determination of in-situ undrained strength. Stress-strain characteristics of soils. Determination of modulus values. Critical state model, Engineering Behaviour of soils of India: Black cotton soils, alluvial silts and sands, laterites, collapsible and sensitive soil.

CVP700 Soil Engineering Lab

3 credits (0-0-6)

Laboratory Tests: Preparation of samples - Sand and Clay, Consolidation test, Direct shear test, Vane shear test, Unconfined compression test, Unconsolidated undrained triaxial test, Consolidated drained triaxial test, Consolidated undrained triaxial test with pore water pressure measurement, Free swell index test, Swelling pressure test.

Field Investigations and field tests: Drilling of bore hole, standard penetration test. undisturbed and representative sampling. SCP Test, Electrical resistivity, Plate load test, Pile load test.

CVL701 Site Investigation and Foundation Design

3 credits (3-0-0)

Site Investigation: Geophysical methods-Seismic, electrical; Drilling methods; Boring in soils and rocks. Field tests: In-situ tests, SPT, DCPT, SCPT, in-situ vane shear test, pressure meter test, plate load test. Sampling techniques and disturbances. Shallow Foundations: Design considerations, codal provisions. Bearing capacity theories, Layered soils, Choice of shear strength parameters. Bearing capacity from field tests. Total and differential settlements. Deep foundations: Types of piles. Construction methods. Axial capacity of single piles. Axial capacity of groups. Settlement of single piles and groups. Uplift capacity (including under-reamed piles) . Negative skin friction. Pile load tests. Pile integrity tests. Codal provisions. Caissons.

Laterally Loaded Piles: Analysis and Design; Foundations in Difficult soil conditions.

CVL702 Ground Improvement and Geosynthetics

3 credits (3-0-0)

Principles of compaction, Engineering behaviour of compacted clays. Shallow stabilization with additives: lime, flyash and cement. Deep stabilization: stone column, sand drains, prefabricated drains, lime column, soil-lime column, vibro-floatation, dynamic compaction, electro-osmosis. Grouting : permeation, compaction and jet; Dewatering systems. Geosynthetics: types and functions, materials and manufacturing processes, testing and evaluation; Reinforced soil structures: principles of soil reinforcement, application of geotextiles and geogrids in roads, walls, and embankments. Application of geotextiles, geonets and geocomposites as drains and filters. Multiple functions: railways and overlay design. Geosynthetics in environmental control: covers and liners for landfills – material aspects and stability considerations.

CVL703 Geoenvironmental Engineering

3 credits (3-0-0)

Subsurface Contamination and Contaminant Transport; Waste disposal on Land and containment, Monitoring of subsurface contamination, Control and Remediation. Engineering Properties of waste and geotechnical reuse, erosion control, sustainability, energy geotechnics.

CVL704 Finite Element Method in Geotechnical Engineering

3 credits (3-0-0)

Introduction. Steps in FEM. Variational Methods, Stress-deformation analysis: One-, Two dimensional formulations; Three-dimensional formulations; Boundary conditions; Solution algorithms; Discretization; use of FEM2D Program and Commercial packages. Analysis of foundations, dams, underground structures and earth retaining structures. Analysis of flow (seepage) through dams and foundations. Consolidation Analysis, Linear and non-linear analysis. In situ stresses. Sequence construction and excavation. Joint/interface elements. Infinite elements. Dynamic analysis. Evaluation of material parameters for linear and non-linear analysis, Recent developments.

CVL705 Slopes and Retaining Structures

3 credits (3-0-0)

Slope stability: infinite slopes; finite height slopes – Swedish method, Bishop's simplified method and other limit equilibrium methods; Stability charts; conditions of analysis – steady state, end of

construction and sudden draw down; earthquake effects. Seepage: flownet in isotropic, anisotropic and layered media; entrance-exit conditions; determination of phreatic line. Earth Dams: Introduction, factors influencing design, design of components, construction, instrumentation. Road and rail embankments. Reinforced slopes. Soil nailing; Gabions. Earth Pressure: Types; Rankine's theory and Coulomb's theory; Effects due to wall friction; Graphical methods; Earthquake effects. Rigid retaining structures: Types; stability analysis. Flexible retaining structures: Types; material; cantilever sheet piles; anchored bulkheads—methods of analysis, moment reduction factors; anchorage. Reinforced soil walls: Elements and stability. Soil arching. Braced excavation: Pressure distribution in sands and clays; bottom heave. Underground structures in soils: Pipes; tunnels. Tunneling techniques.

CVL706 Soil Dynamics and Earthquake Geotechnical Engg.

3 credits (3-0-0)

Engineering problems involving soil dynamics; Role of inertia; Theory of Vibrations: Single and two-degree of freedom systems, vibration measuring instruments, Vibration absorption and isolation techniques. Wave propagation: elastic continuum medium and semi-infinite elastic continuum medium. Measurement of small strain and large strain dynamic soil properties: Field and Laboratory tests. Selection of design values. Design criteria for machine foundations, elastic homogeneous half space solutions, lumped parameter solutions. Codal provisions; Design of Pile-supported machine foundations. Strong Ground Motion: Measurement, characterization and estimation; Amplification theory and ground response analysis. Liquefaction of soils: evaluation using simple methods and mitigation measures. Seismic slope stability analysis, Seismic bearing capacity and earth pressures. Codal provisions.

CVL707 Soil-Structure Interaction Analysis

3 credits (3-0-0)

Basic Soil Models: Single parameter model - Winkler; Two parameter models - Bilonenko-Borodick, Pasternak; Elastic Continuum - plane strain, plane stress, Boussinesq's problem, line load strip load; Special models starting with elastic continuum - Vlazov, Reissner; Three parameter model - Kerr model; Evaluation of model parameters for different conditions. Beam on Winkler foundation: solutions for infinite and semi-infinite beams; Finite beams: method of initial parameters, method of superposition. Beams on Elastic continuum: Use of finite difference method, rigid and flexible beams, lift-off, non-homogeneous soil, non-linear soil, plastic yielding of soil. Raft of Mat foundations: thin rectangular plates, approximate theory of plates, circular plates. Pile on Winkler foundation: Vertically loaded pile - rigid pile, evaluation of spring stiffness, non-homogeneous soil, compressible pile; Laterally loaded pile - rigid pile, Elastic pile, standard solutions for different end conditions; Pile on elastic continuum - vertically loaded piles - rigid pile.

CVL708 Geotechnology of Waste Disposal Facilities

3 credits (3-0-0)

Integrated waste management, Detailed design MSW Landfills and HW Landfills including individual components, Closure of Old landfills, Expansion of old landfills, Ashponds and Tailings Ponds, Seismic Stability; Disposal of Nuclear Waste.

CVL709 Offshore Geotechnical Engineering

3 credits (3-0-0)

Submarine soils: Origin, nature and distribution. Terrigenous and pelagic soils. Submarine soils of India. Engineering behaviour of submarine soils: under-consolidated soils, calcareous soils, cemented soils, corals; Offshore site investigations: sampling and sampling disturbance, insitu testing, wireline technology. Offshore pile foundations for jacket type structures. Foundations of gravity structures; Foundations for jackup rigs. Anchors and breakout forces; anchor systems for floating structures. Stability of submarine slopes. Installation and stability of submarine pipelines.

CVD710 Minor Project (CEU)

3 credits (0-0-6)

CVL710 Engineering Properties of Rocks and Rock Masses

3 credits (3-0-0)

Introduction. Rock materials, Physical properties, Strength behaviour in uniaxial compression, tension and triaxial state. Laboratory testing methods. Stress-strain relationships. Factors influencing strength. Failure mechanism. Anisotropy. Failure criteria, Coulomb, Mohr's, Griffiths and Modified Griffiths criteria and Empirical criteria. Brittle – ductile transition, Post failure behaviour. Strength and deformation behaviour of discontinuities. Rockmass behaviour, Shear strength of jointed rocks, roughness, peak and residual strengths. Strength criteria for rockmass. Intact and rockmass classifications, Terzaghi, RQD, RSR, RMR and Q classifications, Rating, Applications. Creep and cyclic loading. Weathered rocks. Flow through intact and fissured rocks. Dynamic properties.

CVP710 Rock Mechanics Laboratory 1

3 credits (3-0-0)

Tests and test procedures, Rock samples, Specimen preparation, coring, cutting and lapping. Tolerance limits.

Physical Properties: Water absorption, density, specific gravity, porosity, void index, electrical resistivity and sonic wave velocity tests. Mechanical Properties: Uniaxial compression, Point load index and Brazilian strength tests, Elastic properties. Effect of L/D ratio and saturation. Strength anisotropy. Shear tests: Single, double, oblique tests, Punch shear, Triaxial compression tests, Direct shear test. Slake durability and Permeability tests. Compilation of test data. Classification. Codal provisions.

CVL711 Structural Geology

3 credits (3-0-0)

Origin, interior and composition of the earth. Rock cycle, Igneous, Metamorphic and Sedimentary rocks. Rock structures. Plate tectonics, Continental drift and sea floor spreading. Geological time scale. Layered formations, Attitude, true and apparent dips, topographic maps, outcrops. Measurement of attitude of formations. Folds, types of folds, classification, field study of folds, mechanics of folds, causes of folding. Joints, rock mass concept, Joint description and classification. Three point problems, Depth and thickness problems. Faults, mechanics of faulting, normal, reverse and thrusts, faults. Lineations. Foliation, Schistosity. Fault problems. Stereographic projection methods, Use of DIPS software, presentation of geological data and analysis, Applications, Scan line survey of rock joints in the visit.

CVL712 Slopes and Foundations

3 credits (3-0-0)

Introduction, Short-term and long-term stability. Influence of ground water, Seismic effects. Types of rock slope failures. Infinite slopes, Circular and non-circular slip surface analysis, Stability charts. Plane failure analysis. Wedge failure analysis analytical, Stereographic methods. Buckling and toppling failures, Rock falls, Landslides. Foundations: Bearing capacity, settlement and stress distribution in intact and layered rocks. Foundations of dams. Deep foundations. Tension foundations, Codal provisions. Foundation improvement. Use of appropriate software packages.

CVL713 Analysis and Design of Underground Structures

3 credits (3-0-0)

Introduction. Types and classification of underground openings. Factors affecting design. Design methodology. Functional aspects. Size and shapes. Support systems. Codal provisions. Analysis: Stresses and deformations around openings, Stresses and deformations around tunnels and galleries with composite lining due to internal pressure, Closed form solutions, BEM, FEM. Design : Design based on analytical methods; Empirical methods based on RSR, RMR, Q systems; Design based on Rock support interaction analysis; Observational method-NATM, Convergence-confinement method. Design based on Wedge failure and key block analysis. Design of Shafts and hydraulic tunnels.

Stability of excavation face and Tunnel portals. Use of appropriate software packages.

CVL714 Field Exploration and Geotechnical Processes

3 credits (3-0-0)

Surface and sub surface exploration methods. Aerial and remote sensing techniques, Geophysical methods, electrical resistivity, seismic refraction, applications. Rock drilling, Core samplers, Core boxes, Core orientations.

Logging, stratigraphic profile, scan line survey. Laboratory tests, report. Stresses in rocks. Stress anisotropy and stress ratio. Stress relief and compensation techniques, USBM, door stopper cells, flat jack, hydrofrac, strain rosette and dilatometers. Deformability, plate load, pressure tunnel and bore hole tests. Strength tests, insitu compression, tension and direct shear tests. Pull out tests. Borehole extensometers, piezometers, embedment gauges, inclinometers, Slope indicators, packer tests for insitu permeability, Codal provisions.

Ground improvement techniques. Compaction, Grouting, Types of grouts, technique, Rheological models. Viscous and viscoplastic flows. Spherical and radial flows, Shotcrete, Ground anchors, Rock bolts.

CVL715 Excavation Methods and Underground Space Technology

3 credits (3-0-0)

Principles of rock breakage, explosive energy, energy balance, blasting mechanism. Types of explosives, initiators, delay devices, primer and booster selection. Blast hole design. Drilling methods and machines Blast hole timing. Pattern design, open pit and underground blasting, production, estimation and damage criteria of ground vibrations. TBM tunnelling. Factors influencing and evaluation, Excavation mechanics, Boom machines, transverse boom tunnelling machines and Robins mobile miner. Drag pick cutting, cutting tool materials and wear, disc cutters. Case studies.

Tunnels, energy storage caverns, nuclear waste disposal repositories, metros, underground chambers and defence installations. Geological considerations, layout, survey and alignment. Analysis and design methods. Construction methods. Ventilation, provisions, equipment. Control and monitoring system, services, operations and maintenance. Lighting, specifications, maintenance, emergency lighting. Power supply and distribution, Water supply and distribution. Safety provisions, localized hazards, fire hazards in highway tunnels, rapid transit tunnels. Surveillance and control system for highway tunnels. Tunnel finish.

CVL716 Environmental Rock Engineering

3 credits (3-0-0)

Theory: Stress-strain behaviour of rocks and rock masses: Elastic, elasto-plastic, and brittle, Crack phenomena and mechanisms of rock fracture.

Temperature, pressure and water related, problems, Effect of temperature on rock behaviour. Fluid flow through intact and fissured rocks.

Time dependent behaviour of rocks: Creep, Viscoelasticity and Viscoplasticity

Continuum and discontinuum theories: Equivalent material, Block and Distinct element.

Application: Waste disposal, Radioactive and hazardous wastes, repositories, location and design, VLH, VDH and KBS3 concepts. Waste container, barriers, rock structure, embedment, buffers and seals. Performance assessment, quality control and monitoring. Case histories.

Hazardous Earth processes, high ground stresses, rock bursts, subsidence. Karst formations. Landslides and rock falls, slopes stabilization, mitigation, Case studies.

Earthquakes, tectonic stresses, creep, ground motions, damage, prediction. Volcanic activity and hazard. Tsunamis. Case studies.

Thermal analysis, Thermo-mechanical analysis, thermo-hydro-mechanical analysis. Rock dynamics. Physical modelling.

CVD720 Major thesis part1

6 credits (0-0-12)

CVS720 Independent Study

3 credits (0-3-0)

Specific to the context of the problem decided by the supervisor.

CVL720 Air Pollution and Control

3 credits (3-0-0)

Air-pollution; Air Pollution Effect on Plants; Air Pollution effect on Human health; Air quality monitoring; Air Pollution Meteorology; Gaussian Plume model; Urban Air Pollution; Air Pollution from Industries; Air Pollution control; Air pollution indices; standards; norms; rules and regulations; Indoor Air Pollution.

CVD721 Major Thesis Part-II

12 credits (0-0-24)

CVL721 Solid Waste Engineering

3 credits (3-0-0)

Solid Wastes: Origin, Analysis, Composition and Characteristics. Integrated Solid Waste Management System: Collection, Storage, Segregation, Reuse and Recycling possibilities, Transportation, Treatment / Processing and Transformation Techniques, Final Disposal. Management of: Municipal, Biomedical, Nuclear, Electronic and Industrial Solid Wastes and the rules and regulations.

CVL722 Water Engineering

3 credits (3-0-0)

Water quality parameters-conventional contaminants and emerging contaminants; Sedimentation; Coagulation and flocculation; Filtration-mechanisms and interpretations; Ion exchange and adsorption; Disinfection; Reverse osmosis, electrodialysis, desalination;

Water treatment : Source selection process, selection of treatment chain, plant siting, Treatability studies. Design of physico-chemical unit operations.

CVL723 Wastewater Engineering

3 credits (3-0-0)

Wastewater quality parameters, Biological processes; Microbial growth kinetics; Modeling of suspended growth systems; concepts and principles of carbon oxidation, nitrification, denitrification, methanogenesis. Biological nutrient removal; Anaerobic treatment; Attached growth reactors; decentralised wastewater treatment systems; constructed wetlands; Design of pretreatment, secondary treatment, and tertiary disposal systems. Sludge stabilization, treatment, sludge thickening, sludge drying, aerobic and anaerobic digestion of sludges; reliability and cost effectiveness of wastewater systems; Emerging contaminants in wastewater-treatment issues.

CVL724 Environmental Systems Analysis

3 credits (3-0-0)

Introduction to natural and man-made systems. Systems modeling as applied to environmental systems. Nature of environmental systems, the model building process addressing to specific environmental problems. Strategies for analyzing and using environmental systems models. Fate and transport models for contaminants in air, water, and soil. Optimization methods (search techniques, linear programming, non-linear programming, dynamic programming) to evaluate alternatives for solid-waste management and water and air pollution control. Optimization over time. Integrated environmental management strategies addressing multi-objective and multi-stakeholder planning.

CVL725 Environmental Chemistry and Microbiology

3 credits (1-0-4)

Chemical equilibria and kinetics fundamentals; Acids and bases; Titrations; Acidity; Alkalinity; Buffers and buffer intensity; Chemical equilibrium calculations; pC-pH diagram; Langelier index; Solubility diagram; Oxidation and reduction reactions; Cell

structure; Types of microorganisms in environment; metabolic classification of organisms; laboratory procedure for determining chemical and microbial parameters, Introduction to advanced instruments.

CVD726 Minor Project

3 credits (0-0-6)

CVL727 Environmental Risk Assessment

3 credits (3-0-0)

Basic concepts of environmental risk and definitions; Human health risk and ecological risk assessment framework; Hazard identification procedures and hazard prioritization; Environmental risk zonation; Consequence analysis and modelling (discharge models, dispersion models, fire and explosion models, effect models etc). Estimation of incident frequencies from historical data, frequency modelling techniques e.g., Fault tree analysis (FTA) and Event tree analysis (ETA), Reliability block diagram. Human factors in risk analysis; Risk management & communication. Rules, regulations and conventions.

CVL728 Environmental Quality Modeling

3 credits (3-0-0)

Plume Rise Models; Introduction to Air Quality Modelling; Turbulence fundamentals; Basic diffusion equation; Fick's law; deterministic; numerical and statistical modeling approach; Fundamentals of Receptor modelling; Dispersion and receptor models; Fundamentals of Indoor air quality modelling techniques; Fundamentals of Water quality modeling: surface water and ground water models; Fate and transport of Conservative and non-conservative pollutants. Modelling as a tool for strategising pollution prevention and control.

CVL729 Environmental Statistics and Experimental Design

3 credits (2-0-2)

Introduction on environmental data, environmental statistics estimation (concentration, frequency of detection, minimum detection limit, sample size), frequency and probability distributions, inferences concerning mean and variance, confidence Interval estimation, hypotheses test, ANOVA, regression, goodness of fit, factorial experimentation, exceedance factor, intervention model, Case studies.

CVL730 Hydrologic Processes and Modeling

3 credits (3-0-0)

Hydrologic Cycle and its individual component processes. River Basin as a Linear Hydrologic System. Linear Theory of Hydrologic Systems. Lumped Integral and Distributed Differential modelling approaches. Transform methods of Linear Systems Analysis. Morphological attributes of watersheds and its role in runoff dynamics. Flood Routing by Lumped Hydrologic and Distributed Hydraulic approaches. Unsaturated zone Hydrology and physics of the Soil-Plant-Atmosphere Continuum. Calibration and Validation of Rainfall-Runoff models.

CVP730 Simulation Laboratory-I

1.5 credits (0-0-3)

Basic of Fortran 90, Fortran 95 and computing, Numerical solution of different types of partial differential equations: parabolic equation, elliptical equation, hyperbolic equation, Backwater curve analysis; Groundwater flow problems, Pipe network analysis, Unsteady channel flow.

CVS730 Minor Project (CEW)

3 credits (0-0-6)

CVL731 Optimization Techniques in Water Resources

3 credits (3-0-0)

Optimization techniques commonly used in water resources planning & management, water infrastructures, and irrigation and hydropower projects; Linear programming and duality, Network flow algorithms, Dynamic programming, Nonlinear programming, Geometric and Goal programming, Introduction to modern heuristic methods like genetic algorithm and simulated annealing, Multiobjective optimization, Applications and case studies in water resources, agriculture, environment and other areas of science & engineering.

CVP731 Simulation Laboratory-II

1.5 credits (0-0-3)

Simulate hydraulic, hydrologic, pipe flow, water hammer using various softwares such as Visual Mod Flow, SWAT, HYDRUS, Hytran, MIKE, Bentley Software, Fluent, HMS, SAMS.

CVL732 Groundwater Hydrology

3 credits (3-0-0)

Occurrence and movement of groundwater including subsurface investigations of groundwater. Flow through saturated and unsaturated media. well Hydraulics and aquifer parameters. Pumping wells and their design, construction, monitoring and rehabilitation of wells. Recharge of groundwater by various means. Salt water intrusion and coastal aquifer hydraulics. Analog and numerical models and application of Finite Difference method to groundwater, case studies.

CVL733 Advanced Hydraulics

3 credits (3-0-0)

Energy and Momentum principles in open channel, Curvilinear Flows, Backwater computations, Controls, Rapidly varied flows, Spatially varied flows, Unsteady flow, Surges, Flood wave passage, Roll waves, Sediments transport, Incipient motion criteria, Resistance to flow and bed forms, Bed load theory, Stratified flows, Fluvial Systems, Industrial Hydraulics.

CVL734 Finite Element in Water Resources

3 credits (3-0-0)

Introduction to finite element method, Mathematical concepts and weighted residual techniques, Spatial discretization, Shape functions, Isoparametric elements, Explicit and implicit time marching schemes, Equation assembly and solution techniques, Application: Navier-Stokes equations, dispersion of pollutants into ground and surface water, Flow through earthen dams, seepage beneath a hydraulic structure, Groundwater flow in confined and unconfined aquifers.

CVL735 Stochastic Hydrology

3 credits (2-0-2)

Concepts of probability and Random variables; moments and expectations; Common probabilistic distributions and estimation of parameters; goodness of fit tests; Modelling of Hydrologic High and Low Extremes, Regional Frequency Analysis, Stochastic processes and modelling of stochastic time series; Markov Chains and Probabilistic Theory of Reservoir Storages.

CVL736 Soft Computing Techniques in Water Resources

3 credits (2-0-2)

Artificial Intelligence; Expert Systems; Artificial Neural Networks: Introduction, Training, Applications in Hydrology; Genetic Algorithms; Fuzzy Logic Systems, Fuzzy Set Theory, Predictive and Descriptive Data Mining; Classification Methods: Decision trees, NN, Bayesian, ANN, SVM, Applications; Association Analysis; Cluster Analysis - K-means, Fuzzy, Self-Organising maps; Anomaly detection; Applications in Water Resources - Forecasting, Regionalization.

CVL737 Environmental Dynamics and Management

3 credits (3-0-0)

Environmental property and processes, Environmental simulation models, Elements of environmental impact analysis, Impact assessment methodologies, Framework of environmental assessment, Environmental impact of water resources projects, Assessment of hydrological hazards, Environmental management, Case studies.

CVL738 Economic Aspects of Water Resources Development

3 credits (3-0-0)

Economics of water and development, Basic economic concepts, Financial analysis of a project, Pricing concepts, Benefit-cost-sensitivity analysis, Capital budgeting and cost allocation, Economics of natural resources management, Hydro economic model, Hydro-economic risk assessment, Economics of river restoration, Economics of trans-boundary water resources management.

CVL740 Pavement Materials and Design of Pavements*4 credits (3-0-2)*

Components of pavement structure and its requirements; Materials used in pavement construction: aggregate, Portland cement, asphalt, Portland cement concrete, asphalt concrete; Aggregates: production, properties, testing procedures, gradation and blending; Portland cement based materials: mixture design, production, properties, testing, construction; Asphalt binder: refining process, properties, testing procedures, grading systems; Asphalt concrete mixture design: fundamentals of mix design procedure, mixture volumetrics, current mix design procedures; Production and construction practices; Stresses and strains in pavement system: traffic, environment considerations; Design of pavements: new, overlay; Pavement performance; Drainage consideration.

CVL741 Urban and Regional Transportation Planning*4 credits (3-0-2)*

Fundamentals of transportation planning. Components of transportation system and their interaction. Historical development and current status of techniques used in travel demand forecasting; Economic Theory of travel demand forecasting; trip generation, trip distribution, mode choice, traffic assignment models. Integration of land use transport models. Comparison and evaluation of various models. Simultaneous travel demand models: Parameter Estimation and Validation. Travel Data collection and use of surveys. The role of transportation planning in the overall regional system. Methodology and models for regional transportation system, planning, implementation framework and case studies. Applications to passenger and freight movement in urban area. Implications for policy formulations and analysis.

CVL742 Traffic Engineering*4 credits (3-0-2)*

Introductory concepts of traffic engineering, road user and vehicle characteristics Road way geometric characteristics, traffic stream characteristics, and traffic flow theory basics. Statistical applications in traffic engineering. Traffic data collection methods - speed, volume, travel time and delay studies. Parking studies. Highway safety and statistics. Capacity analysis of freeway and multilane highways - fundamental concepts, freeway segment analysis, two-way highways. Intersections concepts of intersection control, intersection layout, signalization basics, signal timing. Analysis of signals and coordination under undersaturated and oversaturated conditions.

CVL743 Airport Planning and Design*3 credits (3-0-0)*

Overview of air transport; Forecasting demand-passenger, freight; Aircraft characteristics; Airport planning-requirements site selection, layout plan; Geometric design of runway, taxiway and aprons; Airport capacity-airside, landside; Passenger terminal-functions, passenger and baggage flow; Airport pavement design and drainage; Parking and apron design; Air cargo facilities; Air traffic control lighting and signing; Airport safety; Environmental impact of airports; Airport financing and economic analysis.

CVL744 Transportation Infrastructure Design*3 credits (2-0-2)*

Transportation infrastructure: components, structural and functional requirements, capacity, level of service; Highway infrastructure: grade intersections, rotaries, interchanges; Railway infrastructure: trackbed design, grade-crossing design, embankment, retaining walls; Drainage infrastructure: culverts, bridges; Pedestrian infrastructure: pedestrian sidewalks, foot bridges; Miscellaneous: bus and truck terminals, parking facilities, guard rails, tunnels, underpasses;.

CVL745 Modeling of Pavement Materials*3 credits (2-0-2)*

Role of constitutive modeling; Laboratory testing in relation to constitutive modeling: elastic modulus, resilient modulus, complex modulus, creep, rheological tests; Introduction to continuum mechanics: strain tensor, stress tensor, isotropy, anisotropy, constitutive relationships; Factors affecting material behavior: temperature, rate, time, confining pressure; Unbound materials:

soil, aggregate; Bound materials: binding using asphalt, water, lime, polymer, flyash, cement; Constitutive models: unbound materials, bound materials; Field performance of pavement materials: fatigue, rutting, temperature issues, moisture damage, permeability; Transfer functions to relate laboratory performance with field performance.

CVL746 Public Transportation Systems*3 credits (3-0-0)*

This course discusses the role of urban public transportation modes, focusing on bus and rail systems. Operational and Technological characteristics are described, along with their impacts on capacity, service quality, and cost. Current practice and methods for data collection and analysis, performance evaluation, route and network design, frequency determination, and vehicle and crew scheduling are covered. Main topics include: Transit System; Estimation of Transit Demand; Route planning techniques; Bus Scheduling; Transit Corridor identification and planning; Mass Transport Management Measures; Integration of Public Transportation Modes. Public transport Infrastructure; Case Studies. Multimodal Transportation Systems.

CVL747 Transportation Safety and Environment*3 credits (3-0-0)*

Scientific management techniques in planning, implementing, and evaluating highway safety programs, strategies to integrate and amplify safety in transportation planning processes, multidisciplinary relationships necessary to support effective traffic safety initiatives. Traffic Safety as public health problem, Injury indices and costing, emergency care, pollution inventory in urban areas, environment and safety standards.

CVL750 Intelligent Transportation Systems*3 credits (3-0-0)*

Introduction to Intelligent Transportation Systems (ITS); ITS Organizational Issues, the fundamental concepts of Intelligent Transportation Systems (ITS) to students with interest in engineering, transportation systems, communication systems, vehicle technologies, transportation planning, transportation policy, and urban planning. ITS in transportation infrastructure and vehicles, that improve transportation safety, productivity, environment, and travel reliability. Mobile device applications of ITS such as trip planners, ETA's of public transit vehicles.

CVD753 Minor Project in Transportation Engineering*3 credits (0-0-6)***CVS754 Independent Study***3 credits (0-0-6)***CVD756 Minor Project in Structural Engineering***3 credits (0-0-6)*

The course content will be decided by the concerned faculty member (supervisor) who will be assigning the research project to the students registered for this course.

CVL756 Advanced Structural Analysis*3 credits (3-0-0)*

Matrix methods for 3-D skeletal structures: force and displacement methods including analysis using substructures, static condensation. Computational aspects including in plane rigidity of slab, non-prismatic members, and shear deformation effects. Non-linear analysis: second order and elastoplastic analysis. Energy approaches. Analysis of plates and singly curved shells.

CVP756 Structural Engineering Laboratory*3 credits (0-0-6)*

Concrete: Concrete mix-design Evaluation of stress-strain response of plain, self-compacting and high-performance concrete; Behaviour of RC members under axial, flexure, shear torsion, and interaction; Behavior of slabs, Non-destructive testing. Response of structures and its elements against extreme loading events. Model testing: Models of plates, shells, and frames; Free and forced vibrations;

Evaluation of dynamic modulus; Beam vibrations; Vibration isolation; Shear wall building model; Time and frequency-domain study. Smart materials; Photogrammetry for Displacement Measurement; Vibration Characteristics of RC Beams using Piezoelectric Sensors etc.

CVS756 Independent Study (CES)

3 credits (0-0-6)

Course content will be decided by the concerned faculty member of structural engineering.

CVD757 Major Project Part-I (CES)

9 credits (0-0-18)

CVL757 Finite Element Methods in Structural Engineering

3 credits (3-0-0)

Review of principles of virtual work and minimum potential energy. Elements of theory of elasticity. Finite element (FE) techniques for linear and static problems. Developing various types of finite elements: 1-D, 2-D, and 3-D. Formulating displacement and shape functions. Variational and weighted residual techniques. Higher order/ isoparametric formulation for truss, beam, frame, plate, and shell elements. Numerical solution procedures and computational aspects. Applications to structures such as dams, frames, shear walls, grid floors, rafts etc. Algorithms for FE problem solving and commercial software modeling issues. Application of FE methods to solve thermal problems.

CVD758 Major Project Part-II (CES)

9 credits (0-0-18)

CVL758 Solid Mechanics in Structural Engineering

3 credits (3-0-0)

Introduction; Historical developments; Theory of stress; Kinematics; Isotropic/ anisotropic linear elastic solids; Axioms of constitutive equations; Finite isotropic elasticity; Hypo/ hyperelasticity; Hardening plasticity; Viscoelasticity; Boundary Value Problems (BVPs); Plane elasticity; Polar coordinates Torsion and bending of prismatic bars with general section; Elastic wave propagation; Current trends.

CVL759 Structural Dynamics

3 credits (3-0-0)

Theory of structural dynamics and vibration analysis. Free and forced vibration of single degree of freedom (SDOF) systems, load regimes and response to harmonic, periodic, impulsive, and general dynamic loading. Response of SDOF to earthquake and response spectrum concept. Damping in structures and its evaluation. Free and forced vibration of lumped multi degree of freedom (MDOF) structures. Methods for obtaining natural frequencies and mode shapes. Normal mode theory; mode combination rules; dynamic response evaluation. Force excited and base excited dynamical systems. Time domain analysis using numerical integration scheme. Free and forced vibration of continuous systems. Frequency domain analysis of dynamical systems. Introduction to advanced topics in structural dynamics.

CVL760 Theory of Concrete Structures

3 credits (3-0-0)

Introduction: Historical developments, Material properties; Cracked concrete members under flexural moment and axial force; Deformations and collapse; M-P interaction. Beams without stirrups under flexural and torsional shear: Morsch and Regan theories; Skew-bending theory. Beams with stirrups under flexural and torsional shear: Plane and space truss analogies, Modified compression field theory, Unified theory, P-M-V-T interaction; Strut and tie model; Cracking: Bond slip, Development length, Tension stiffening, Durability detailing; Serviceability: Elastic, creep and shrinkage deformations; Elastic analysis: Redistribution of moments; Plastic analysis: Inelastic and hysteretic behaviour, Limit design, Confined concrete: Ductility detailing requirements; Buckling of columns; Concrete slabs: Yield line theory, Strip Theory; Reliability and safety: Limit state design method, Target reliability; Current trends: Constitutive modelling, Capacity design, Finite element analysis.

CVL761 Theory of Steel Structures

3 credits (3-0-0)

Structural steel: Classifications, Grades, Behavioural characteristics, Plasticity and hardening; Material models: Simple, Rigid, Power function, Smooth hysteretic; Design methodology: Allowable, Limit state, Ultimate; Methods of analysis including second-order effects; Plastic design: Plate instabilities, Local buckling, Section classifications; Structural stability: Global buckling, Member and frames under axial and combined loading; Sway and non-sway frames; Design of members under combined bending, shear and torsion; Connections: Simple, Semi-rigid, Rigid; Plates girders: Simple post-critical theory, Tension-field theory, Section design, Stiffener requirements; Gantry girder; Grillage foundation; Earthquake-resistant design and detailing; Fire-resistant design; Fatigue-resistant design.

CVL762 Earthquake Analysis and Design

3 credits (3-0-0)

Seismology, Seismic Risk and Hazard; Soil Dynamics and Seismic Inputs to Structures; Response Spectrum Analysis (RSA); Special Analysis; Nonlinear and Push-Over Analysis; Dynamic Soil-Structure Interaction (SSI); Earthquake Resistant Design Philosophy; Performance Based Earthquake Engineering; Code Provisions for Seismic Design of Structures; Retrofitting and Strengthening of Structures; Concept of Base Isolation Design and Structural Vibration Control; Advanced Topics in Earthquake Engineering.

CVL763 Analytical and Numerical Methods for Structural Engineering

3 credits (3-0-0)

Introduction: Mathematical foundations of structural theory. Linear algebra: vector spaces and linear transformations. Linear differential equations and function spaces. Partial differential equations; Elliptic, parabolic and hyperbolic PDEs. Nonlinear differential equations. Gaussian Elimination; Factorization Techniques - LU, Cholesky; Iterative Methods of Solution of Linear Simultaneous Equations. Properties of Eigenvalues and Eigenvectors; Similarity Transforms; Diagonalization and Numerical Techniques to Compute Eigenvalues - Vector Iteration, QR algorithm, Jacobi Method. Time Marching Schemes (Step by Step Solutions); Euler's Method; Runge Kutta Method; Newmark Beta Method. Numerical Solution of Boundary Value Problems - Finite Difference Method, Explicit and Implicit Approaches; Method of Weighted Residuals, Galerkin's Method. Numerical Integration: Gauss-Legendre Method, Newton-Cotes Method. Regression Analysis and Curve Fitting. Applications of mathematical and numerical methods to static, dynamic and stability analysis of elastic structures and cables.

CVL764 Blast Resistant Design of Structures

3 credits (3-0-0)

Blast Engineering: Explosion Phenomena, Shock Front, Fragmentation, Waves, Ground Shock, and Interaction with Structures; Structural Analysis for Impulsive Loading; Pressure-Impulse (PI) Diagrams; Material Behaviour under High Strain-Rate of Loadings; Blast Resistant Design of Structures; Performance-Based Blast Design; Progressive Collapse; Anti-Terrorism Planning and Design of Facilities; Blast Retrofitting; Indian/ International Standards and Codes of Practice; Numerical Analysis Tools for Blast Analysis using Finite Element (FE) Software and Hydrocodes.

CVL765 Concrete Mechanics

3 credits (3-0-0)

Introduction; Rheological modelling of fresh concrete; Flowing concrete; Mechanics of hardened concrete: Failure criteria; Constitutive equations; Elasto- plasticity, visco-elasticity, fatigue, damage mechanics and fracture; Mechanics of hydrating concretes, Durability Mechanics, Transport processes; Drying shrinkage; Micromechanics , Numerical and analytical homogenisation, poromechanics , Crystalline growths and internal microstresses.

CVL766 Design of Bridge Structures

3 credits (3-0-0)

Introduction, historical/ magnificent bridges; Site Selection, Planning, and Type of Bridges, Loads and Forces; Code Provisions for Design

of Steel and Concrete Bridges; Analysis Methods, Grillage Analogy; Theories of Lateral Load Distribution and Design of Superstructure: Slab Type, Beam-Slab, and Box Type; Distribution of Externally Applied and Self-Induced Horizontal Forces among Bridge Supports in Straight, Curved, and Skewed Decks; Continuous Type and Balanced Cantilever Type Superstructure; Temperature Stresses in Concrete Bridge Deck; Different Types of Foundations: Open, Pile, and Well Foundations; Choice of Foundation for Abutments and Piers; Design of Abutments, Piers, Pile/ Pier Caps; Effect of Differential Settlement of Supports; Bridge Bearings; Expansion Joints for Bridge Decks; Vibration of Bridge Decks; Parapet and Railings for Highway Bridges; Construction Methods; Segmental Construction of Bridges; Inspection and Maintenance of Bridges; Health Monitoring and Evaluation of Existing Bridges; Bridge Failure: Case Studies.

CVL767 Design of Fiber Reinforced Composite Structures 3 credits (3-0-0)

Introduction; Types of structural fibers: matrix, fiber and interface; Fiber reinforced concrete (FRC); High-performance concrete; Stress transfer, Bond, Pull-out, Toughening mechanism; Fracture mechanics; Modeling of tensile and flexural behaviours; Behaviour under compression; Shear failure theory; Behaviour under seismic loading; Composite structural design: Design spirals, Criteria, Selection configurations; Laminate design; Mathematical analysis of laminates; Design of single skin panels, Design of composite stiffeners.

CVL768 Design of Masonry Structures 3 credits (3-0-0)

Introduction and Historical Perspective; Masonry Materials; Masonry Design Approaches; Overview of Load Conditions; Compression Behavior of Masonry; Masonry Wall Configurations; Distribution of Lateral Forces; Flexural Strength of Reinforced Masonry Members: In-plane and Out-of-plane Loading, Interactions; Structural Wall; Columns and Pilasters; Retaining Wall; Pier and Foundation; Shear Strength and Ductility of Reinforced Masonry Members; Prestressed Masonry; Stability of Walls; Coupling of Masonry Walls, Openings, Columns, Beams; Elastic and inelastic analysis; Modelling Techniques; Static Push-Over Analysis and use of Capacity Design Spectra.

CVL769 Design of Tall Buildings 3 credits (3-0-0)

Structural systems and general concepts of tall buildings; Various methods of structural analysis; Gravity systems for steel, concrete, and composite buildings; Lateral systems for steel, concrete, and composite buildings; Interaction of frames and shear walls; Simultaneous and sequential loading; Differential shortening of columns; P-Δ effects; Effect of openings; Foundations and foundation-superstructure interaction; Wind/ earthquake effects and design for ductility; Damping systems; Asymmetric structures and twisting of frames.

CVL770 Prestressed and Composite Structures 3 credits (3-0-0)

Introduction; Need, Advantages, and Disadvantages; High Strength Materials; Pretensioning and Post-Tensioning Methods; Prestressing Methods; Prestressing Systems and Devices; Camber, Deflections, and Cable Profiles/ Layouts; Load-Balancing; Codes and Standards; Prestressed Concrete Members - Flexure, Shear, Torsion Behaviors; Design Methods and Code Provisions; Strain Compatibility Method; Pressure/ Thrust Line; Pre-Tensioning; Grouted/ Bonded and Ungouted/ Unbonded Post-Tensioning; Partial Prestressing; Bursting Stresses; Anchorage Zone (End Block Design); Transmission and Transfer Length; De-Bonding and Draping of Prestressing Tendons; Camber, Deflection, and Ductility; External Prestressing; De-Compression; Losses in Prestress; Bearing and Bond Stresses; Case Studies of Prestressed Concrete Bridge Design and Practices.

Need of Composite Construction; Analysis of Indeterminate and Composite Structures; Design Methods for Composite Beams, Slabs, Columns, Box-girders, Shear Studs etc.

CVC771 Seminar In Construction Technology and Management-I

1 credits (0-0-2)/Audit

CVD771 Minor Project (CEC)

3 credits (0-0-6)

CVL771 Advanced Concrete Technology

3 credits (3-0-0)

Hydration of cements and microstructural development, Mineral additives, Chemical admixtures, Rheology of concrete, Creep and relaxation, Shrinkage, cracking and volume stability, deterioration processes, special concretes, Advanced characterisation techniques, sustainability issues in concreting, Modelling properties of concrete.

CVP771 Construction Technology Laboratory

1.5 credits (0-0-3)

Tests related to quality control at site, in-situ tests, tests related to damage and deterioration assessment, performance monitoring of structures.

CVS771 Independent Study (CEC)

3 credits (0-0-6)

CVC772 Seminar In Construction Technology and Management-II

1 credits (0-0-2)/Audit

CVD772 Major Project Part-I (CEC)

9 credits (0-0-18)

CVL772 Construction Project Management

3 credits (3-0-0)

Introduction to construction project management - CPM, PERT, PDM, LOB. Scope management, WBS, PDRI. Time and cost management, material related management - purchase & inventory control, time-cost-resource optimization, quality, safety - planning & control. Labor productivity variations, productivity improvement - work study. Measuring project progress & performance - EVA & ES. Identification of risks and impact. Management Information systems.

CVP772 Computational Laboratory for Construction Management

1.5 credits (0-0-3)

Introduction to construction project models - analytical and numerical. Application software for project planning, scheduling & control. Programming exercises for estimation, network planning and control, LP in construction.

MATLAB Programming in linear and non-linear programming.

CVD773 Major Project Part-II (CEC)

12 credits (0-0-24)

CVL773 Quantitative Methods in Construction Management

3 credits (3-0-0)

Introduction and concepts of probability and statistics, Linear programming, Transportation and assignment problems. Dynamic programming, Queuing theory, Decision theory, Games theory. Simulations applied to construction, Modifications and improvement on CPM/PERT techniques.

CVL774 Construction Contract Management

3 credits (3-0-0)

Professional Ethics, Duties and Responsibilities of Parties. Owner's and contractor's estimate, Bidding Models and Bidding Strategies, Qualification of Bidders. Tendering and Contractual procedures, Indian Contract Act 1872, Definition of Contract and its Applicability, Types of Contracts, Clauses in Domestic and International Contracts - CPWD, MES, FIDIC, AIA, NEC, JCT, etc. Contract Administration, Delay Protocol, Change Orders Analysis, Claim Management and

Compensation, Disputes and Resolution Techniques, Arbitration and Conciliation Act 1996, Arbitration Case Studies.

CVL775 Construction Economics and Finance

3 credits (3-0-0)

Engineering economics, Time value of money, discounted cash flow, NPV, ROR, PI. Basis of comparison, Incremental rate of return, Benefit-cost analysis, Replacement analysis, Break even analysis. Depreciation and amortization. Taxation and inflation, Evaluation of profit before and after tax. Risks and uncertainties and management decision in capital budgeting. Working capital management, financial plan and multiple source of finance. Budgeting and budgetary control, Performance budgeting. Profit & Loss, Balance Sheet, Income statement, Ratio analysis, Appraisal through financial statements, International finance, forward, futures and swap. Practical problems and case studies.

CVD776 Minor Project (CET)

3 credits (0-0-6)

CVL776 Construction Practices and Equipment

3 credits (3-0-0)

Form work design and scaffolding, slipform and other moving forms, Shoring, Reshoring, and Backshoring in multistoreyed Building construction.

Prestressing, Steel and composites construction methods: Fabrication and erection of structures including heavy structures, Prefab construction,

Industrialized construction, Modular coordination. Special construction methods: High rise construction, Bridge construction including segmental construction, incremental construction and push launching techniques.

Factors affecting selection of equipment - technical and economic, Analysis of production outputs and costs, Characteristics and performances of equipment for major civil engineering activities such as Earth moving, erection, material transport, pile driving, Dewatering, and Concreting.

CVS776 Independent Study (CET)

3 credits (0-0-6)

CVD777 Major Project Part-I (CET)

9 credits (0-0-18)

CVL777 Building Science

3 credits (3-0-0)

Introduction to environmental features relevant to functional design. their measures description and quantification. Periodic nature of variation of environmental descriptors. Heat exchange of building with environment under diurnal periodic variation temperature and modelling. Estimation of hourly internal temperature through CIBS method. Thermal Design philosophy and optimization for decision variables such as shape, orientation, envelope properties etc. Purpose of ventilation, wind and stack effect as driving force. Design for desired flow and indoor velocity. Fundamentals of acoustics, Sound ion free field and enclosure. External and Internal air borne noise control. Protection against structure borne noise. Lighting principles and daylighting. Day light factor, and design for desired illumination and glare free lighting.

CVD778 Major Project Part-II (CET)

12 credits (0-0-24)

CVL778 Building Services and Maintenance Management

3 credits (3-0-0)

Concepts of functional design of building for fire protection, design of lift systems for optimum service. Building service system design. Control and intelligent buildings, HVAC, hot and cold water services, waste water handling system, electrical services, building maintenance management.

CVL779 Formwork for Concrete Structures

3 credits (3-0-0)

Requirements and selection for Formwork , Formwork Materials, such as Timber, Plywood, Steel, Aluminum Form, Plastic Forms, and Accessories, Horizontal and Vertical Formwork Supports; Formwork Design Concepts, Illustration of Formwork system for Foundations, walls, columns, slab and beams and their design, Formwork for Shells, Domes, Folded Plates, Overhead Water Tanks, Natural Draft Cooling Tower. Formwork for Bridge Structures, Flying Formwork such as Table form, Tunnel form. Slipform, Formwork for Precast Concrete, Formwork Management Issues pre award and post award, Formwork failures-causes and Case Studies in Formwork Failure, Formwork issues in multi-story building construction.

CVD800 Major Project Part-I

6 credits (0-0-12)

CVL800 Emerging Topics in Geotechnical Engineering

3 credits (3-0-0)

A course which will vary from year to year to study new and exciting developments in the broad spectrum of Geotechnical and Geoenvironmental Engineering. The course will also focus on new offshoots of Geotechnical and Geoenvironmental Engineering.

CVP800 Geoenvironmental and Geotechnical Engg Lab

3 credits (0-0-6)

Engineering properties and compaction characteristics of waste - coal ash , mine tailings. Permeability of clays and bentonite amended soils.

Physical, Mechanical and Hydraulic Testing of Geosynthetics

Landfill liner and cover: Evaluation of shear strength parameters of various Interfaces and design.

Project based laboratory for evaluation of engineering properties of soils for design of embankments.

CVS800 Independent Study

3 credits (0-0-6)

CVD801 Major Project Part-II

12 credits (0-0-24)

CVL801 Constitutive Modelling in Geotechnics

3 credits (3-0-0)

Introduction: fundamental relations, models and soil mechanics. Elasticity: Isotropic, anisotropic, soil elasticity. Plasticity and yielding: yielding of clays, yielding of sands, slip line fields, introduction to upper and lower bounds, selected boundary value problems. Elastic-plastic model for soils: elastic volumetric strains, plastic volumetric strains, plastic hardening, plastic shear strains, plastic potentials, flow rule. Cam clay model: critical state line, shear strength, stress-dilatancy, index properties, prediction of conventional soil tests. Applications.

CVD810 Major Project Part-I (CEU)

6 credits (0-0-12)

CVL810 Emerging Topics in Rock Engg and Underground Structures

3 credits (3-0-0)

Advanced and state-of-the-art rock engineering topics.

CVP810 Rock Mechanics Laboratory-II

3 credits (3-0-0)

Pre-requisite: Rock Mechanics Lab-I CVP710

Project planning, Schedule and cost assessment, DPR and GD for Major projects, Field visit, Sample collection, Scanline survey and seismic survey,, Rock characterization, Determination of physical and mechanical properties of rocks, Analysis of slopes using GEOSLOPE and Analysis of tunnels using Phase2, both using the material properties determined through laboratory tests. Design of slopes and tunnels.

CVS810 Independent Study (CEU)

3 credits (0-3-0)

CVD811 Major Project Part-II (CEU)

12 credits (0-0-24)

CVL811 Numerical and Computer Methods in Geomechanics

3 credits (2-0-2)

Pre-requisite: CVL704 or Equivalent

Introduction to Numerical Methods, ODEs, PDEs, Equation solution techniques, Root finding techniques, Fourier Series, Types of geotechnical boundary value problems, Numerical modeling, Numerical solution schemes, pros and cons, Programming tools- FORTRAN, MATLAB, MATHCAD, Development of programming flowchart.

Simplified and advanced constitutive models and their calibration: Elastic Models, Elasto-plastic Models, Formulation of Elasto-Plastic Stiffness Matrix, Governing equations of elastoplasticity, Rock and Soil constitutive models.

Integration of stress-strain equations, Concepts of verification and validation, Selection of model input parameters, Integration of load-displacement relations, Integration of seepage, consolidation and heat conduction equations, Sturm–Liouville problem, Solution of seepage, consolidation, heat conduction and Sturm–Liouville equations using finite difference and finite element programming methods, Comparison with commercially available software results.

CVL817 Structural Safety and Reliability (PG)

3 credits (3-0-0)

Fundamentals of set theory and probability, probability distribution, regression analysis, hypothesis testing. Stochastic process and its moments and distributions, concepts of safety factors, Safety, reliability and risk analysis, first order and second order reliability methods, simulation based methods, confidence limits and bayesian revision of reliability, reliability based design, examples of reliability analysis of structures.

CVL818 Design of Plates and Shells (PG)

3 credits (2-1-0)

Prismatic folded plate systems. Shell equations. Approximate solutions. Analysis and design of cylindrical shells. Approximate design methods for doubly curved shells.

CVL819 Concrete Mechanics (PG)

3 credits (3-0-0)

Introduction; Rheological modelling of fresh concrete; Constitutive equations; Nonlinear elasticity, plasticity, visco-elasticity and fracture mechanics of hardened concrete; Confinement and ductility; Moisture diffusion; Drying shrinkage; Solid and structural mechanics of reinforced concrete, Skew bending, modified compression field and unified theories of R.C. beams under bending, shear and torsion; Bond-slip and phenomenon of cracking in reinforced concrete; Statical and dynamical analysis of R.C. Structures; Trends.

CVL820 Environmental impact assessment

3 credits (3-0-0)

Planning and Management of Environmental Impact Studies. Impact indentation methodologies: base line studies, screening, scoping, checklist, networks, overlays. Prediction and assessment of impacts on the socio-economic environment. Environmental cost benefit analysis. Decision methods for evaluation of alternatives. Case Studies. Environmental impact assessment at project level, regional level, sectoral level, and policy level. Sustainable development; Environmental policy in planned, mixed and market economies. Preventive environmental management.

CVP820 Advanced Air Pollution Laboratory

3 credits (1-0-4)

Monitoring of TSP using HVS, Monitoring of PM_{2.5} using cyclone

based sampler, Size segregated particle collection and data analysis using histogram, inversion program, Personal exposure assesment, determination of count and geometric mean diameter, determination of chemical species in air samples, Determination of emission factors of particle and gases for combustion sources, Determination of TVOC; Determination of indoor air quality paprameters, determination of Bioaerosol; Monitoring and analysis of meteorological paprameters.

CVL821 Industrial Waste Management and Audit

3 credits (3-0-0)

Industrial Wastes: Nature and characteristics, Prevention and Control, Tools for clean processes: reuse, recycle, recovery, source reduction, raw material substiuion, process modification, Flow sheet analysis, Enegy and resources audit, Waste audit, emission inventory and waste management heirarchy for process industries, Zero discharge, Environmental indicators, Industrial ecology and ecoparks, rules and regulations, Case studies: Dairy, Fertilizer, Distillery, Pulp and Paper, Iron and steel, Metal plating, Refineries, Thermal power plants, etc.

CVP821 Advanced Water and Wastewater Laboratory

3 credits (1-0-4)

Principles of instrumentation and application for water quality paramters measurements, Operation of batch scale models for various processes: Activated sludge process, Disinfection, Settlers, Coagulation, Filtration, Anaerobic digestion, Adsorption. Design and operation of treatability studies and microbial growth kinetics, microbial toxicity and bioaccumulation studies. Micropollutants detection; Package programmes for water and wastewater conveyance, treatment and disposal.

CVL822 Emerging Technologies for Environmental Management

3 credits (3-0-0)

Contemporary micro and macro environmental issues of importance, global environmental and resource sharing issues, international treaties and protocols. Emerging contaminants and emerging technologies for waste management, Case studies of environmental pollution and innovative management strategies. Environmentel technology transfer, Non-conventional Energy, Emission trading, Adaptation to climate change.

CVL823 Thermal Techniques for Waste Management

3 credits (3-0-0)

Fundamentals of Thermodynamics, Heat Transfer and Combustion as applied to Waste Incineration. Introduction to fuels, reactor design, fluidization engineering and furnace technology. Combustion of gaseous, liquid and solid fuels. Wastes as fuels. Low, medium and high temperature thermal treatment techniques, Energy recovery, pollution control techniques for thermal facilities, Design of thermal treatement facilities with pollution control devices.

CVL824 Life Cycle Analysis and Design for Environment

3 credits (3-0-0)

Engineering products and processes : Environmental health and safety, Product life cycle stages, Material toxicity, pollution, and degradation, Environmentally conscious design and manufacturing approaches, Sustainable development and industrial ecology. System life-cycles from cradle to reincarnation, Product life-extension, Organizational issues. Pollution prevention practices, Manufacturing process selection and trade-offs. Design for Environment : Motivation, concerns, definitions, examples, guidelines, methods, and tools. Recyclability assessments, Design for recycling practices. Re- manufacturability assessments, Design for Remanufacture / Reuse practices. Industrial ecology and Eco-industrial parks. Eco-Labels and Life-Cycle analysis (LCA): LCA methodology, steps, tools and problems, Life-Cycle Accounting and Costing. ISO 14000 Environmental Management Standards. New business paradigms and associated design practices.

CVL825 Fundamental of Aerosol: Health and Climate Change

3 credits (3-0-0)

This course will introduce the students with fundamentals of aerosols,

Difference in gas and particle motion in the air, physio-chemical and optical properties of individual and mixed particles, behaviour of non-spherical particles, thermodynamic properties of aerosol, particle formation, application of aerosol fundamentals and properties in research and industries, impact of aerosol properties on indoor/outdoor air quality, health and climate.

CVL826 Quantitative microbial risk assessment

1 credit (1-0-0)

Pathogens, Occurrence and fate in environment, Human exposure pathways, Microbial exposure dose estimation, Infection and dose-response modeling, Risk of infection estimation, Uncertainty estimation.

CVL827 Environmental Implications of Engineered Nanomaterials

2 credits (2-0-0)

Engineered nanomaterials, Occurrence of nanomaterials in environment, Fate of nanomaterials in environment, Exposure pathways-model development and parameter estimation, Dose-response effects of nanomaterials to humans and aquatic species; dose-response modeling and risk estimation of nanomaterials exposures; Risk management of nanomaterials pollution; Prioritization of nanomaterials for monitoring; Regulatory guidelines for implications assessment and pollution regulations; Emerging challenges for long-term management of nanomaterials exposure.

CVL828 Water Distribution and Sewerage Network Design

3 credits (3-0-0)

Planning for water supply sources and demand assessment. Water demand forecasting. Types of water distribution systems. Intermittent and continuous water supply systems. Design and analysis of Water mains. Design and analysis of water distribution system. Analysis of water deficient systems. Optimal design of water distribution systems. On-line monitoring of water quality parameters. Retrofitting of the existing water supply systems.

Planning for wastewater conveyance system in urban areas. Combined and separate systems for storm and sewage. Design and analysis of wastewater conveyance system. Optimal design of wastewater conveyance systems. Operation and maintenance issues. Retrofitting of the sewerage system.

CVL830 Groundwater Flow and Pollution Modeling

3 credits (3-0-0)

Subsurface processes and concepts for groundwater resources evaluation, Unsaturated zone properties: Soil moisture levels, Retention curves, Flow through unsaturated porous media, Multiphase flows, infiltration and Wetting front, Groundwater contamination, Sources and causes of groundwater pollution, Pollution dynamics, Hydrodynamics dispersion, Adsorption, Biodegradation, Radioactive decay, Reactive processes, Multiphase contamination, NAPLs, VOCs, Site specific groundwater quality problems in Indian context, Numerical models, Finite difference methods, Numerical modeling of steady and transient flows in saturated and unsaturated domain, Contaminant transport modeling, Application of FEM and BIEM in groundwater modeling, Regional aquifer simulation, Contaminated groundwater systems and their rehabilitation, Development and optimization based management of aquifer systems, Stochastic models, Random field concepts in groundwater models; Application of emerging techniques to groundwater management.

CVS830 Independent Study (CEW)

3 credits (0-3-0)

CVD831 Major Project Part I

6 credits (0-0-12)

CVL831 Surface Water Quality Modeling and Control

3 credits (3-0-0)

River hydrology and derivation of Stream Equation, Derivation of Estuary equation, Distribution of water quality in rivers and estuaries.

Physical and Chemical characteristics of Lakes, Finite Difference steady state river, estuary and Lake models, Dissolved Oxygen models in rivers, estuaries and Lakes, Fate of Indicator Bacteria and pathogens in water bodies. Basic Mechanism of Eutrophication, Lake phytoplankton models, eutrophication in rivers and estuaries. Elements of Toxic substance analysis.

CVD832 Major Project Part II

12 credits (0-0-24)

CVL832 Hydroelectric Engineering

3 credits (3-0-0)

Hydropower development schemes and their various configurations, Planning for firm Capacities, Peak Load and Base Load configurations, Role of and Regulation of Hydropower development in a mixed hydro-steam system, Governing of Hydropower systems; study of hydraulic transients in Penstocks. Surge analysis and dynamics of Surge tanks. Micro hydro power developments.

CVL833 Water Resources Systems

3 credits (3-0-0)

Water Resources Planning Purposes and Objectives, Multi-component, multi-user, multi-objective and multi-purpose attributes of an Integrated Water Resources System, Economic basis for selection of a Plan Alternative

Introduction to Linear Programming and applications in Water Resources Engg

Irrigation Planning and Operation Models, Linear, Deterministic Integrated Water Resources Management Model on River Basin Scale, River Basin Scale Integrated Stochastic Water Resources Planning and Management Models.

CVL834 Urban Water Infrastructure

3 credits (3-0-0)

Urban water cycle, Urban water infrastructures - water supply, storm water drainage, sanitation, sewerage and wastewater conveyance infrastructures, Water supply and sewerage network hydraulics, SCADA systems, Sustainable urban designs, Methodologies for assessing sustainability of urban water infrastructures, Emerging sustainable materials and design procedures for water supply and sewerage pipelines, Hydraulic performance and structural strength, chemical resistance and resilience characteristics of emerging materials based water and sewer pipelines, Rehabilitation and augmentation technologies for water supply and sewerage networks, Analytic hierarchy process and optimization techniques for arriving at the best appropriate rehabilitation/ augmentation technology, Urban water management, Rain water harvesting, Managed aquifer recharge, Constructed/engineered wetlands, Sprinkler and drip irrigation, Water use efficiencies, Effect of water management practices on urban water infrastructure, hydrology and groundwater regime, Surface and subsurface mapping of water supply and sewerage networks, Structural safety and mitigating plans against natural and human caused threats.

CVL835 Eco-hydraulics and Hydrology

3 credits (3-0-0)

Classification of Hydro environmental systems, governing equations for open surface flow domains, pollutant transport equations in hydro-environmental flow systems, computational methods and solution techniques. Study of ecological descriptors, numerical ecology, multi-objective definitions of environmental flows, Hydrologic indices for e-flows and river health assessment. Riverine habitat characterization and habitat simulation models. Anthropogenic triggers for changes in riverine habitat.

CVL836 Advanced Hydrologic Land Surface Processes

3 credits (3-0-0)

Introduction: Eco-hydro-climatology; Climate System; Climate, weather and Climate Change; Water, Energy and Carbon Cycle; Overview of Earth's Atmosphere: Heat-Balance of Earth Atmosphere System; Temporal Variation of Air temperature; Introduction to Atmospheric

Thermodynamics: First and second law of thermodynamics, Adiabatic process and adiabatic lapse rate, Entropy, Clausius-Clapeyron Theory, Introduction to cloud microphysics and cloud droplet formation process, Cloud liquid water content, entrainment, warm and cold cloud. Hydrologic Cycle: Global water balance; Precipitation and Weather, Forms of Precipitation; Atmospheric Stability; Monsoon; Global Wind Circulation; Indian Summer Monsoon Rainfall. Climate Variability: Floods, Droughts, Climate Extremes. Climate Change: Introduction; Causes and Modeling of Climate Change, Climate Models, Downscaling; IPCC Scenarios; Commonly used Statistical Methods in Hydro-climatology: Trend Analysis; EOF, PCA; Canonical Correlation; Statistical Downscaling; Ecological Climatology: Leaf energy fluxes and leaf photosynthesis; Ecosystem and vegetation dynamics; Coupled climate vegetation dynamics, Carbon cycle climate feedbacks.

CVL837 Mechanics of Sediment Transport

3 credits (2-0-2)

Introduction; Equations of Particle Motion particle in a moving fluid, collision with the bed, diffusion of turbulence; Macroscopic View of Sediment Transport – bedload, suspended load; Threshold Condition for Sediment Motion – Critical stress for flow over a granular bed, Shields diagram; Mechanics of Bedload Transport: Bagnold hypothesis of bedload transport, bedload transport relations; Mechanics of Suspended Sediment Transport; Total load transport; Descriptive Analysis of Bedforms – introduction of bedform mechanics, dunes, antidunes, ripples, bars; Stability Analysis of Bedforms; Mechanism of transportation of materials by fluid flow through pipeline; Rheology and classification of complex mixtures; Fundamentals of two-phase flow; Phase separation and settling behaviour; Flow of non-Newtonian fluids through pipes: Turbulent flows of Complex mixtures, Slurry pipeline transportation, Design methods.

CVL838 Geographic Information Systems

3 credits (2-0-2)

What is GIS. Geographic concepts for GIS. Spatial relationships, topology, spatial patterns, spatial interpolation. Data storage, data structure, non-spatial database models. Populating GIS, digitizing, data conversion. Spatial data models, Raster and Vector data structures and algorithms. Digital Elevation Models (DEM) and their application. Georeferencing and projection systems, GIS application areas, Spatial analysis, quantifying relationships, spatial statistics, spatial search.

CVL839 Hydrologic Applications of Remote Sensing

3 credits (2-0-2)

Principles of remote sensing, Remote sensing platforms and data acquisition systems, Wavebands, Radiometric quantities, Spectral reflectance and spectral signature, Interaction of electromagnetic radiation with land surface features, hydrosphere and atmosphere, Data capture for simulation of land surface processes, Photographic and image interpretation, Satellite image processing, Earth surface features inventory, Geomorphology, Landuse classification, Landuse planning and landcover mapping, Flood plain mapping and flood plain zoning, Remote sensing applications in water resources, agriculture, geology and environmental monitoring, Applications in snow and glacier studies, Snow line, Ice cover, Snow-pack properties, Integrated use of remote sensing and GIS, Database preparation and Decision support analysis, Estimation of damages due to hydrologic extremes and preparation of contingency plans, Case studies.

CVL840 Planning and Design of Sustainable Transport Systems

3 credits (3-0-0)

Sustainable Transportation Planning and Design including: Consideration of bicycles, pedestrian, mass transit modes, and private vehicles like cars and two wheelers as well as how these modes interrelate. Applicability at varying scales, from a downtown street to a neighborhood to a regional network Case studies are discussed from different parts of the world. Various indicators for measuring sustainability index of transport system including public health, resource consumption, local and global pollution and equity considerations are discussed.

CVL841 Advanced Transportation Modelling

3 credits (2-0-2)

Systems Approach to Travel demand models, Trip generation Models Using Different Statistical techniques, Trip distribution, Discrete Choice Logit, Nested Logit and other Models, Network Assignment, Traffic Assignment Using User Equilibrium and Systems Optimization Techniques, Revealed preference and Stated Preference surveys, Analysis of Ranked and Rated data, Demand models for Nonmotorised transport and Public Transport systems.

CVL842 Geometric Design of Roads

3 credits (2-0-2)

Introduction to basic road geometric design elements and methodology - design philosophy and design techniques; Design controls - human, vehicle and speed related factors. Road vehicle performance - road vehicle dynamics - tractive and resisting forces. Braking forces. Theoretical and practical stopping distances. Elements of geometric design - cross section elements; Horizontal Alignment - tangents, curves, transitions, superelevation; Vertical Alignment - grades and curves; Coordination of Horizontal and Vertical Alignment. Design of Intersections at-grade- design principles, channelization, roundabouts, Interchanges- types, warrants, lane balancing; Road side safety- hazards and clear zone concept, traffic safety barriers, impact attenuation.

CVL844 Transportation Infrastructure Management

3 credits (3-0-0)

Transportation infrastructure components; Deterioration phenomena; Effect of external factors like environment, traffic loading, material properties on deterioration mechanisms; Evaluation techniques to evaluate damage: destructive, nondestructive; Performance models: development, calibration; Infrastructure management systems; Serviceability of condition and safety; Decision making and optimization techniques applied to infrastructure management; Life cycle cost analysis techniques.

CVL845 Viscoelastic Behavior of Bituminous Materials

3 credits (3-0-0)

Overview of material behavior-elastic, plastic, viscoelastic, Viscoplastic response; Aging; Issues in representative volume element; Mechanical analogs for viscoelastic response; Fundamental viscoelastic response-creep compliance, relaxation, complex modulus; Interconversion techniques to obtain fundamental viscoelastic responses; Time-temperature superposition; linear viscoelastic constitutive equations; Elastic-viscoelastic correspondence principle; Predicting material behavior-undamaged, damaged state conditions, Introduction to nonlinear viscoelasticity, Viscoelastoplastic behavior, fracture mechanics.

CVL846 Transportation System Management

3 credits (3-0-0)

Transportation systems - resource management, approaches to funding. Asset and demand management - Integrated network design, changing travel behaviour, optimising asset management, role of technology; Optimizing the investment outcomes - movement of freight and passenger traffic. Land use planning and urban growth management - land use and its effect on infrastructure and efficient network operations. congestion, systemic congestion improvement and system-wide efficiency, Transit oriented development, safety considerations; evaluation of strategies; case studies.

CVL847 Transportation Economics

3 credits (3-0-0)

Overview of Transportation Economics; Transportation Investments and economic Development. Basics of Engineering economics, marginal analysis, opportunity cost, shadow price, money value of time, discounted cash flow, NPV, ROR, benefit-cost analysis. Road User Costs; Public transportation economics; Social Cost of Transportation; Cost of congestion, pollution, traffic accidents. Taxation, regulations, financing Transport Systems; Legal framework for transportation sector, case studies.

CVL849 Traffic Flow Modelling*3 credits (3-0-0)*

Descriptors of traffic flow: Macroscopic and Microscopic, time, space and generalized measurement regions. Cumulative plots. Traffic Flow models - General classification and typology. Macroscopic Flow Models - continuity equation, LWR model, higher order models, numerical schema, Mesoscopic Flow Models - gas kinetic theory, Microscopic and Submicroscopic Flow Models - car following and lane changing; Pipes and forbes models; General motors-Gazis-Herman-Rothery (GHR) models, Stability analysis, macro-micro bridge. Modelling at Junctions/Intersections; Un-signalized and Signalized; Roundabouts; Pedestrian Modelling - normal and panic movements; variations across infrastructure; Simulation - simple and complex traffic conditions.

CVL850 Transportation Logistics*3 credits (3-0-0)*

Evolution of freight and logistics; Interrelationships between society, environment and freight transport; Survey methodologies to understand freight movement; Cost measurement: Production, Holding, Transportation, Handling; Effect of internal and external variables on cost; Demand forecasting; Inventory planning and management; Transportation and distribution network: Design, Reverse Logistics. Development, Management; Ware house operations; Pricing: Perishable, seasonal demand, uncertainty issues; Vehicle routing: One-to-one distribution, One-to-many distribution, Shortest path algorithm, Quickest time algorithm; Logistics information system; Designing and planning transportation networks; City logistics.

CVL851 Special Topics in Transportation Engineering*3 credits (3-0-0)*

Course details shall be announced by the instructor at the time of offering of the course. The lectures will be supplemented by reading materials. The assessment will be based on a combination of assignments, quizzes, and term papers and tests.

CVS852 Advanced Topics in Transportation Engineering*3 credits (0-0-6)*

This is an advanced course for MTech Transportation engineering program where students will study a specialized topic within transportation engineering (including but not limited to transportation planning, traffic engineering and pavement engineering). The topic shall be announced by instructor at the beginning. The performance of student in this course will be evaluated through presentation(s) and report(s) made by student during the registered term.

CVD853 Major Project Part 1*9 credits (0-0-18)***CVD854 Major Project Part 2***12 credits (0-0-24)***CVL856 Strengthening and Retrofitting of Structures***3 credits (3-0-0)*

Structural assessment, damage under accidental and cyclic loads, cracking in structures, evaluation of damage, analysis of existing structures, compression, flexural and shear strengthening, strengthening using laminates, strengthening using prestressing, bracing and stiffening of structures, maintenance of retrofitting, design codes for retrofitting of structures, retrofitting of steel structures, retrofitting of masonry structures.

CVL857 Structural Safety and Reliability*3 credits (3-0-0)*

Fundamentals of Set Theory and Probability; Probability Distribution, Regression Analysis, Hypothesis Testing. Stochastic Process and Its Moments; Probability Distributions; Concepts of Safety Factors, Safety, Reliability and Risk Analysis; First Order and Second Order Reliability Methods; Simulation Based Methods; Confidence Limits and Bayesian Revision of Reliability; Reliability Based Design; System Reliability; Examples of Reliability Analysis of Structures.

CVL858 Theory of Plates and Shells*3 credits (3-0-0)*

Thin and thick plate theories. Bending of long rectangular plate to a cylindrical surface. Prismatic folded plate systems. Pure and symmetric bending of plates. Small and large deflections of plates. Special and approximate methods in theory of plates. General theory of cylindrical shells. Shell equations. Approximate solutions of plates and shells equations. Analysis and design of cylindrical shells. Approximate design methods for doubly curved shells. Stress analysis methods in spherical shells. Spherical shell of constant thickness. Symmetrical bending of shallow spherical shells. Conical shells.

CVL859 Theory of Structural Stability*3 credits (3-0-0)*

Introduction: Buckling of steel and concrete structures; Conservative and non-conservative loads. Elastic buckling of columns and beam-columns: Static, dynamical and energy-based approaches. Viscoelastic and elastoplastic buckling. Torsional buckling. Flexural-torsional and lateral buckling. Plate and frame buckling. Imperfection sensitivity; Post-buckling theory. Snap-through. Dynamic stability: Divergence, flutter and parametric resonance. Nonlinear dynamical systems theory; Bifurcations. Recent trends.

CVL860 Advanced Finite Element Method and Programming*3 credits (3-0-0)*

Finite element method (FEM) to solve complex structural engineering problems. Various types of finite elements (FE) considering nonlinear material models; constitutive laws; hybrid elements. Strong and weak form representation and solutions. FEM for dynamic problems: consistent mass matrix, vibration of bars, beams, and plate elements. FEM for buckling problems: geometric matrix, buckling of struts, and plate elements. FE modeling and analysis of complex structures: 3-D frames, shear walls, bridges, cooling towers, continua etc. Computational aspects: meshing, convergence, singularity, etc. Interpretation of results. Comparison with other methods.

CVL861 Analysis and Design of Machine Foundations*3 credits (3-0-0)*

General design requirements, general dynamics of machine foundations for rotating and reciprocating machines, determination of soil properties, modelling, analysis and design of block/ frame type foundations, specific details for machines applying impulsive loads, compressors and turbo-generators, detailed dynamic analysis and modes of vibration for frame type foundations, techniques for vibration isolation, practical case studies, code requirements, construction aspects of machine foundations.

Laboratory: Instrumentation aspects in terms of sensors and data acquisition systems, measurement of dynamic soil parameters, measurement of vibration related parameters, vibration isolation, computational aspects related to frame type foundations including dynamic analysis.

CVL862 Design of Offshore Structures*3 credits (3-0-0)*

Rudiments of offshore engineering; sea spectra; wave theories; wave-structure interaction. Design of offshore platforms: introduction, fixed and floating platforms. Buoyed structures/ articulated towers; tension-leg platform (TLP); Marine risers; compliant and non-compliant structures; offshore pipelines and risers; Steel, concrete, and hybrid platforms. Buoys and mooring system design; Design criteria and code provisions. Environmental loading. Wind, wave, and current loads. Loads and stability during handling and towing. Introduction to stochastic dynamics of ocean structures considering different sea spectra. Soil-structure interaction (SSI): beam on Winkler foundation foundation (p-y curve approach). Dynamic analysis of SPAR platforms. Fatigue analysis of fixed and floating offshore structure: stress concentration, S-N curves. Foundations: site investigations, gravity, jacket platforms, hybrid platforms. Piled foundation and behavior under dynamic loading. Static and dynamic analysis of platforms and components. Dynamic analysis using software: response of fixed type offshore

structures, articulated towers, single leg- and multi-legged towers.

CVL863 General Continuum Mechanics

3 credits (3-0-0)

Introduction: Field and particle theories in physics. Historical development of continuum mechanics; A basic engineering science. Classical theories: Stress and kinematics. Elasticity, viscoelasticity and elastoplasticity; Newtonian fluids.

Continuum thermomechanics; Classius- Duhem Inequality; Thermodynamics with internal variables. Constitutive equations; Axioms for simple materials; Frame indifference; Finite elasticity; Hyper/ hypoelasticity; Non- Newtonian fluids.

Polar and nonlocal materials; Materials of differential/ gradient type; Configurational mechanics; Biomechanics; Nanomechanics. Theories of conduction and diffusion; Electromagnetism . Coupled fields: Thermoelasticity and electromagnetoelasticity; MHD; Chemomechanics. Intermediate problems; Statistical continuum theories; Relativistic continuum mechanics; Materials models for luminiferous Aether.

Rational methodology and realism; Current trends.

CVL864 Structural Health Monitoring

3 credits (3-0-0)

Concept of structural health monitoring, sensor systems and hardware requirements, global and local techniques, computational aspects of global dynamic techniques, experimental mode shapes, damage localization and quantification, piezo-electric materials and other smart materials, electro-mechanical impedance (EMI) technique, adaptations of EMI technique.

Laboratory: Sensor installation and diagnostics, mode shape extraction, location and quantification of damage using global dynamic techniques, damage detection using electro – mechanical impedance technique, remote monitoring.

CVL865 Structural Vibration Control

3 credits (3-0-0)

Introduction; Types and classifications; Control theories; Optimal stiffness distributions for building type structures; Role of damping in controlling motion; Active and semi-active systems; Tuned mass dampers - single/ multiple; Quasi-static active control; Passive control: viscous, visco-elastic, friction, hysteretic dampers, base isolation; Nonlinear modeling; Dynamic feedback control; Neural network based control systems; Design for buildings, bridges, power plants, and other structures; Current trends and performance-based design.

CVL866 Wind Resistant Design of Structures

3 credits (3-0-0)

Causes and types of wind. Atmospheric boundary layer and turbulence. Wind velocity measurements and distribution. Bluffbody aerodynamics, random vibrations, and spectral analysis. Along wind and across wind response considering vortex shedding of tall buildings, towers, and slender structures. Vortex induced vibrations of slender structures. Wind-Induced lock-in excitation of tall structures. Buffeting response prediction subjected to random load. Aeroelastic phenomena. Turbulence modeling. Gust buffeting and fluttering effect on structures. Vibration of cable supported bridges and power lines due to wind effects. Wind pressure on cooling towers. Design of cladding and wind damping devices. Wind tunnel simulations and tornado effects.

CVL871 Durability and Repair of Concrete Structures

3 credits (3-0-0)

Chemical composition of concrete, permeability and transport processes, corrosion of reinforcement and prestressing steel in concrete, carbonation, chloride attack, alkali-silica reaction, freeze-thaw attack, sulphate attack, acid attack, effect of fire and high temperatures and seawater attack, cracking, weathering, biological processes, non-destructive testing, repairs, protection and retrofitting, durability based design of structures.

CVL872 Infrastructure Development and Management

3 credits (3-0-0)

Introduction to Indian Infrastructure. Govt. initiatives through various five year plans.

Overview of various sectors of infrastructure and SEZ.

Infrastructure procurement through Public-Private-Partnership. Sector-wise differences in policies, Concession agreement, Selection procedure of concessionaires, Issues in financial closure, Stakeholder management.

Financial Models, Risk management, Environmental Impact Assessment, Case studies.

CVL873 Fire Engineering and Design

3 credits (3-0-0)

(A) Fire engineering: fundamentals of fire science, fire dynamics, hazard mitigation, and safety; codes, standards, rules and fire safety regulations; thermodynamics, thermofluids, heat and mass transfer; human behavior in fire and urban planning; fire testing methods for materials; large-scale fire testing. "Fire protection" - current methods in fire safety engineering; mechanics of repair; mitigation of fire damage by due design, and construction; industrial fire safety. Passive fire protection: analyzing the thermal effects of fires on buildings and designing structural members. Introduction to active fire protection.

(B) Structural fire engineering: fire behavior and scenarios, heat transfer to the structure, structural response and stability under thermo-mechanical loads; fire safety design; mechanical properties of structural materials at elevated temperatures; fire response of steel, concrete, fiber reinforced polymers, high-performance materials etc.; computational procedures to predict structural behavior under fire conditions; structural fire resistance based on theoretical/ empirical relationships; performance-based fire engineering; strengthening/ repair of structures.

CVL874 Quality and Safety in Construction

3 credits (3-0-0)

Introduction to safety. Types of injuries, Factors affecting safety, Strategic Planning for safety provisions. Personal & Structural safety - Safety consideration during construction, demolition and during use of equipment. Recording injuries and accident indices. Method statement, SOPs, PPE, Inspections, Investigations. Site safety programmes - JSA, JHA, Root cause analysis, meetings, safety policy, manuals, training & orientation. Safety legislation regard to violation.

Introduction to quality, assurance, control and audit. Regulatory agent - owner, designer, contractor. Strategic Planning and control of quality during design and construction, Quality tools in construction projects, Customer satisfaction and QFD, Quantitative techniques in quality control, Quality assurance during construction, Inspection of materials and machinery. Assessing quality. Teachings/findings of Gurus - Concept and philosophy of TQM, 6Sigma, ISO Certification.

IS codes and standards regard to quality & safety.

CVL875 Sustainable Materials and Green Buildings

3 credits (3-0-0)

Introduction and definition of Sustainability. Carbon cycle and role of construction material such as concrete and steel, etc. CO2 contribution from cement and other construction materials. Construction materials and indoor air quality. No/Low cement concrete. Recycled and manufactured aggregate. Role of QC and durability. Life cycle and sustainability. Components of embodied energy, calculation of embodied energy for construction materials. Exergy concept and primary energy. Embodied energy via-a-vis operational energy in conditioned building. Life Cycle energy use. Control of energy use in building, ECBC code, codes in neighboring tropical countries, OTTV concepts and calculations, features of LEED and TERI Griha ratings. Role of insulation and thermal properties of construction materials, influence of moisture content and modeling. Performance ratings of green buildings. Zero energy building.

Department of Computer Science

COL100 Introduction to Computer Science

4 credits (3-0-2)

Concept of an algorithm; termination and correctness. Algorithms to programs: specification, top-down development and stepwise refinement. Iterative versus recursive style; problem solving using a functional style; correctness issues in programming; efficiency issues in programming; time and space measures. Structured style of imperative programming; assertions and loop invariants; programming in an imperative language using advanced features: procedures, functions. Data types, representational invariants. Encapsulation, abstractions, interaction, modularity. Identifying and exploiting inherent concurrency.

COL106 Data Structures & Algorithms

5 credits (3-0-4)

Pre-requisites: COL100

Introduction to object-oriented programming through stacks queues and linked lists. Dictionaries; skip-lists, hashing, analysis of collision resolution techniques. Trees, traversals, binary search trees, optimal and average BSTs. Balanced BST: AVL Trees, 2-4 trees, red-black trees, B-trees. Tries and suffix trees. Priority queues and binary heaps. Sorting: merge, quick, radix, selection and heap sort, Graphs: Breadth first search and connected components. Depth first search in directed and undirected graphs.

Dijkstra's algorithm, directed acyclic graphs and topological sort. Some geometric data-structures.

COL202 Discrete Mathematical Structures

4 credits (3-1-0)

Overlaps with: MTL180

Propositional logic, Predicate Calculus and Quantifiers; Proof Methods; Sets, functions, relations, Cardinality, Infinity and Diagonalization; Induction and Recursion; Modular Arithmetic, Euclid's Algorithm, primes, Public Key Cryptography; Polynomials, finite fields and Secret Sharing; Coding Theory: Error correcting codes, Hamming codes, Hamming bound; Basic Counting - Pigeon hole principle; Advanced Counting - recurrence relations, generating functions, inclusion-exclusion; basic information theory, entropy, Kraft's inequality, mutual information, lower bounds; Probability - sample space, conditional probability, expectation, linearity of expectation, variance, Markov, Chebychev, probabilistic methods; Graph Theory - Eulerian, Hamiltonian & planar graphs, edge and vertex coloring.

COL215 Digital Logic & System Design

5 credits (3-0-4)

Pre-requisites: COL100, ELL100

Overlaps with: ELL201

The course contents can be broadly divided into two parts. First part deals with the basics of circuit design and includes topics like circuit minimization, sequential circuit design and design of and using RTL building blocks. The second part is focused on ASIC style system design and introduces VHDL, FPGA as implementation technology, synthesis steps as well as testing techniques. Course ends with introducing the challenges of embedded design where software is becoming integral to all devices. The laboratory assignments are a key component of this course and requires students to design and implement circuits and sub-systems on FPGA kits covering almost all the topics covered in the lectures.

COL216 Computer Architecture

4 credits (3-0-2)

Pre-requisites: ELL201

Overlaps with: ELL305

History of computers, Boolean logic and number systems, Assembly language programming, ARM assembly language, Computer arithmetic, Design of a basic processor, Microprogramming, Pipelining, Memory system, Virtual memory, I/O protocols and devices, Multiprocessors.

COL226 Programming Languages

5 credits (3-0-4)

Pre-requisites: COL216, COL106

Value and state oriented paradigms. Translation. Notions of syntax and semantics of programming languages; introduction to operational/ natural semantics of functional and imperative languages. Data abstractions and control constructs; block-structure and scope, principles of abstraction, qualification and correspondence; parameter passing mechanisms; runtime structure and operating environment; practical and implementation issues in run-time systems and environment; abstract machines; features of functional and imperative languages; the un-typed and simply-typed Lambda calculus, type systems for programming languages including simple types and polymorphism; objects; classes and inheritance in object-oriented languages.

Interactive programming and interfaces.

The laboratory activities will involve building a variety of small interpreters for core languages in various paradigms. Tools such as lex and yacc will be introduced for front-end analysis.

COP290 Design Practices

3 credits (0-0-6)

The contents may differ each year depending on the instructor. The course should involve 2-3 large programming projects done in groups of 2-4.

COD300 Design Project

2 credits (0-0-4)

Basic design methodology – introduction to the steps involved, Familiarization with software practices, tools and techniques, software project involving conceptualization, design analysis, implementation and testing using the tools and techniques learnt.

COD310 Mini Project

3 credits (0-0-6)

Design / Fabrication / Implementation work under the guidance of a faculty member. Prior to registration, a detailed plan of work should be submitted by the student to the Head of the Department for approval

COR310 Professional Practices (CS)

2 credits (1-0-2)

The course would consist of talks by working professionals from industry, government and research organizations. It may also include site visits to various organizations.

COS310 Independent Study (CS)

3 credits (0-3-0)

Research oriented activities or study of subjects outside regular course offerings under the guidance of a faculty member. Prior to registration, a detailed plan of work should be submitted by the student to the Head of the Department for approval.

COP315 Embedded System Design Project

4 credits (0-1-6)

Students working in small groups of four to six are expected to deliver in one semester on an innovative solution for problems/ challenges that are typical to India and perhaps other developing countries. The students would have to go through the full cycle of specification, design and prototyping/building a concept demonstrator. Key component of the assessment would be through a public demonstration of their solution.

Learning to work in groups as well as planning and delivering a large task are other expected learnings.

COL331 Operating Systems

5 credits (3-0-4)

Pre-requisites: COL106 CSP290

Overlaps with: ELL405

Primary UNIX abstractions: threads, address spaces, filesystem, devices, interprocess communication; Introduction to hardware support for OS (e.g., discuss x86 architecture); Processes and Memory; Address Translation; Interrupts and Exceptions; Context Switching; Scheduling; Multiprocessors and Locking; Condition Variables, Semaphores, Barriers, Message Passing, etc.; Filesystem semantics, design and implementation; Filesystem Durability and Crash recovery; Security and Access Control.

COL333 Principles of Artificial Intelligence

4 credits (3-0-2)

Pre-requisites: COL106

Overlaps with: CSL720 EE758

Philosophy of artificial intelligence, problem solving, search techniques, constraint satisfaction, game playing (minimax, expectiminimax), automated planning, knowledge representation and reasoning through logic, knowledge representation and reasoning through fuzzy logic and Bayesian networks, Markov decision processes, machine learning, neural networks, reinforcement learning, soft computing, introduction to natural language processing.

COL334 Computer Networks

4 credits (3-0-2)

Pre-requisites: COL106 COL216

Overlaps with: EEL700

Students will be exposed to common network algorithms and protocols, including physical layer modulation (analog AM/FM, digital ASK/FSK/PSK), encoding (NRZ, Manchester, 4B/5B), link layer framing, error control, medium access control (TDMA, FDMA, CSMA/CA, CSMA/CD), bridging, SDN, addressing (IPv4/v6), name resolution (DNS), routing (DV, LS, protocols RIP, OSPF, BGP), transport protocols (TCP), congestion avoidance (window based AIMD), and application design models (client-server, P2P, functioning of HTTP, SMTP, IMAP). Programming assignments will be designed to test network application design concepts, protocol design towards developing error detection and correction methods, efficient network utilization, and familiarization with basic tools such as ping, traceroute, Wireshark.

COL341 Machine Learning

4 credits (3-0-2)

Supervised Learning Algorithms: 1. Logistic Regression 2. Neural Networks 3. Decision Trees 4. Nearest Neighbor 5. Support Vector Machines 6. Naive Bayes. ML and MAP estimates. Bayes' Optimal Classifier. Introduction to Graphical Models. Generative Vs. Discriminative Models. Unsupervised learning algorithms: K-Means clustering, Expectation Maximization, Gaussian Mixture Models. PCA and Feature Selection, PAC Learnability, Reinforcement Learning. Some application areas of machine learning e.g. Natural Language Processing, Computer Vision, applications on the web. Introduction to advanced topics such as Statistical Relational Learning.

COL351 Analysis and Design of Algorithms

4 credits (3-1-0)

Pre-requisites: COL106

Overlaps with: MTL342

checking 2-edge, 2-node and strong connectivity using DFS. Strongly connected components. Greedy algorithms, minimum spanning trees (Prim/Kruskal), Union-find data structure. Matroids. Divide and conquer algorithms. Polynomial multiplication, DFT and FFT. Dynamic Programming, All pairs shortest paths (Bellman-Ford, Floyd Warshall). s-t flows, Ford-Fulkerson, Edmonds-Karp, applications of maxflow

Intractability, NP-completeness, Polynomial time reductions. String matching, KMP and Rabin-Karp. Universal hashing and applications. Geometric algorithms like convex hulls, multidimensional data structures, plane sweep paradigm.

COL352 Intro to Automata & Theory of Computation

3 credits (3-0-0)

Pre-requisites: COL202

Overlaps with: COL705 MAL382

Regular Languages, Finite Automata, equivalence, minimization, Myhill-Nerode Theorem, introduction to non-determinism, Context free grammars, Pushdown automata, equivalence and applications. Turing machines, Recursive and Recursively enumerable sets, non-determinism, RAMs and equivalence, Universal Turing Machines, undecidability, Rice's theorems for RE sets, Post machines, Basics of Recursive function theory. Equivalence, Church's thesis, computational complexity, space and time complexity of Turing Machines, Relationships, Savage's theorem, Complexity classes, Complete problems, NP-completeness, Cook-Levin theorem.

COL362 Introduction to Database Management Systems

4 credits (3-0-2)

Pre-requisites: COL106

Overlaps with: MTL710

Data models (ER, relational models, constraints, normalization), declarative querying (relational algebra, datalog, SQL), query processing/optimization (basics of indexes, logical/physical query plans, views) and transaction management (introduction to concurrency control and recovery). Overview of XML data management, text management, distributed data management.

Course project to build a web-based database application.

COL380 Intro to Parallel & Distributed Programming

3 credits (2-0-2)

Pre-requisites: COL106 COL351 COL331

Overlaps with: COL730

Concurrency, Consistency of state and memory, Parallel architecture, Latency and throughput, Models of parallel computation, performance metrics and speedup, Message-passing and Shared-memory programming paradigms, Communication networks and primitives, Concepts of Atomicity, Consensus, Conditions and Synchronization, Security, Fault tolerance, Replication of state and memory.

COD492 B.Tech Project Part 1

6 credits (0-0-12)

Pre-requisites: EC 100

This project spans also the course COD494. Hence it is expected that the problem specification and the milestones to be achieved in solving the problem are clearly specified.

COD494 B.Tech Project Part 2

8 credits (0-0-16)

Pre-requisites: EC 100

The student(s) who work on a project are expected to work towards the goals and milestones set in COD492. At the end there would be a demonstration of the solution and possible future work on the same problem. A dissertation outlining the entire problem, including a survey of literature and the various results obtained along with their solutions is expected to be produced.

COP701 Software Systems Laboratory

3 credits (0-0-6)

This course consists of set of project oriented assignments announced at the start of each semester with definite submission deadlines. Assignments are designed to develop skills and familiarity with a majority of the following: make, configuration management tools, installation of software, archiving and creation of libraries, version control systems, documentation and literate programming systems (LaTeX), lex, yacc, PERL and other scripting languages, sockets and RPCs, usage of standard libraries like pthreads, numerical packages, XML and semi-structured data, simulation environments, testing and validation tools.

COL702 Advanced Data Structures

4 credits (3-0-2)

Pre-requisites: COL106

Review of basic data structures and their realization in object oriented Environments. Dynamic Data structures: 2-3 trees, Redblack trees, binary heaps, binomial and Fibonacci heaps, Skip lists, Universal Hashing. Data structures for maintaining ranges, intervals and disjoint sets with applications. B-trees. Tries and suffix trees. Priority queues and binary heaps. Sorting: merge, quick, radix, selection and heap sort, Graphs: Breadth first search and connected components. Depth first search in directed and undirected graphs. Disjkras algorithm, Directed acyclic graphs and topological sort. Some geometric data-structures. Basic algorithmic techniques like

dynamic programming and divide-and-conquer. Sorting algorithms with analysis, integer sorting, selection. Graph algorithms like DFS with applications, MSTs and shortest paths.

COL703 Logic for Computer Science

4 credits (3-0-2)

Pre-requisites: COL160

Overlaps with: CSL765 MAL607

Review of the principle of mathematical induction; the principle of structural induction; review of Boolean algebras; Syntax of propositional formulas; Truth and the semantics of propositional logic; Notions of satisfiability, validity, inconsistency; Deduction systems for propositional logic; Completeness of deduction systems; First order logic (FOL) ; Proof theory for FOL; introduction to model theory; completeness and compactness theorems; First order theories. Programming exercises will include representation and evaluation; conversion to normal-forms; tautology checking; proof normalization; resolution; unification; Skolemization, conversion to Horn-clauses; binary-decision diagrams. Decidability, undecidability and complexity results. Introduction to formal methods, temporal/modal logics.

COL705 Theory of Computation and Complexity

3 credits (3-0-0)

Pre-requisites: COL352 OR EQUIVALENT

Review of Automata Theory, Turing Machines and Universal Turing Machines. Computability & Undecidability, Rice's theorem. Computational Complexity: Time and Space hierarchy, Gap theorem, Classes P and NP, Cook-Levin theorem, PSPACE completeness, NL completeness, Immerman-Szelepcseyi theorem, Alternation, Polynomial hierarchy, Permanent and #P completeness, Oracle machines, Baker-Gill-Solovay theorem, Randomized Turing Machine, RP, ZPP, BPP, Adleman's theorem, Yao's minmax theorem, Derandomization.

COL718 Architecture of High Performance Computers

4 credits (3-0-2)

Pre-requisites: COL216

Classification of parallel computing structures; Instruction level parallelism - static and dynamic pipelining, improving branch performance, superscalar and VLIW processors; High performance memory system; Shared memory multiprocessors and cache coherence; Multiprocessor interconnection networks; Performance modelling; Issues in programming multiprocessors; Data parallel architectures

COL719 Synthesis of Digital Systems

4 credits (3-0-2)

Pre-requisites: COL215

After a basic overview of the VLSI design flow, hardware modelling principles and hardware description using the VHDL language are covered. This is followed by a study of the major steps involved in behavioural synthesis: scheduling, allocation, and binding. This is followed by register-transfer level synthesis, which includes retiming and Finite State Machine encoding. Logic synthesis, consisting of combinational logic optimisation and technology mapping, is covered next. Popular chip architectures - standard cells and FPGA are introduced. The course concludes with a brief overview of layout synthesis topics: placement and routing.

COL722 Introduction to Compressed Sensing

3 credits (3-0-0)

Pre-requisites: COL106

Sparsity, L1 minimization, Sparse regression, deterministic and probabilistic approaches to compressed sensing, restricted isometry property and its application in sparse recovery, robustness in the presence of noise, algorithms for compressed sensing.

Applications in magnetic resonance imaging (MRI), applications in analog-to-digital conversion, low-rank matrix recovery, applications in image reconstruction.

COL724 Advanced Computer Networks

4 credits (3-0-2)

Pre-requisites: COL334

Review of the Internet architecture, layering; wired and wireless MAC; intra- and inter-domain Internet routing, BGP, MPLS, MANETs; error control and reliable delivery, ARQ, FEC, TCP; congestion and flow control; QoS, scheduling; mobility, mobile IP, TCP and MAC interactions, session persistence; multicast; Internet topology, economic models of ISPs/CDNs/content providers; future directions. gradient, Newton's method.

COL726 Numerical Algorithms

4 credits (3-0-2)

Pre-requisites: COL100

Overlaps with: MTL107

Number representation, fundamentals of error analysis, conditioning, stability, polynomials and root finding, interpolation, singular value decomposition and its applications, QR factorization, condition number, least squares and regression, Gaussian elimination, eigenvalue computations and applications, iterative methods, linear programming, elements of convex optimization including steepest descent, conjugate gradient, Newton's method.

COL728 Compiler Design

4.5 credits (3-0-3)

Pre-requisites: COL226

Overlaps with: COL729 EEL702

Compilers and translators; lexical and syntactic analysis, top-down and bottom up parsing techniques; internal form of source programs; semantic analysis, symbol tables, error detection and recovery, code generation and optimization. Type checking and static analysis. Static analysis formulated as fixpoint of simultaneous semantic equations. Data flow. Abstract interpretation. Correctness issues in code optimizations. Algorithms and implementation techniques for type-checking, code generation and optimization. Students will design and implement translators, static analysis, type-checking and optimization.

This is a praxis-based course. Students will use a variety of software tools and techniques in implementing a complete compiler.

COL729 Compiler Optimization

4.5 credits (3-0-3)

Pre-requisites: COL226 COL216

Overlaps with: COL728

Program representation – symbol table, abstract syntax tree; Control flow analysis; Data flow analysis; Static single assignment; Def-use and Use-def chains; Early optimisations – constant folding, algebraic simplifications, value numbering, copy propagation, constant propagation; Redundancy Elimination – dead code elimination, loop invariant code motion, common sub-expression elimination; Register Allocation; Scheduling – branch delay slot scheduling, list scheduling, trace scheduling, software pipelining; Optimizing for memory hierarchy – code placement, scalar replacement of arrays, register pipelining; Loop transformations – loop fission, loop fusion, loop permutation, loop unrolling, loop tiling; Function inlining and tail recursion; Dependence analysis; Just-in-time compilation; Garbage collection.

Laboratory component would involve getting familiar with internal representations of compilers; profiling and performance evaluation; and the design and implementation of novel compiler optimisations.

COL730 Parallel Programming

4 credits (3-0-2)

Pre-requisites: COL100

Parallel computer organization, Parallel performance analysis, Scalability, High level Parallel programming models and framework, Load distribution and scheduling, Throughput, Latency, Memory and Data Organizations, Inter-process communication and synchronization, Shared memory architecture, Memory consistency, Interconnection network and routing, Distributed memory architecture, Distributed shared memory, Parallel IO, Parallel graph algorithms, Parallel Algorithm techniques: Searching, Sorting, Prefix operations, Pointer Jumping, Divide-and-Conquer, Partitioning, Pipelining, Accelerated Cascading, Symmetry Breaking, Synchronization (Locked/Lock-free).

COL732 Virtualization and Cloud Computing

4 credits (3-0-2)

Pre-requisites: COL331

Introduction to Virtualization and Cloud Computing; Binary Translation; Hardware Virtualization; Memory Resource Management in Virtual Machine Monitor; Application of Virtualization; Cloud-scale Data Management and Processing; I/O Virtualization.

COL733 Cloud Computing Technology Fundamentals

4 credits (3-0-2)

Pre-requisites: COL331

Overview of Cloud Computing, Virtualisation of CPU, Memory and I/O Devices; Storage Virtualisation and Software Defined Storage (SDS), Software Defined Networks (SDN) and Network Virtualisation, Data Centre Design and interconnection Networks, Cloud Architectures, Public Cloud Platforms (Google App Engine, AWS, Azure), Cloud Security and Trust Management, Open Source Clouds (Baadal, Open Stack, Cloud Stack), Cloud Programming and Software Environments (Hadoop, GFS, Map Reduce, NoSQL systems, Big Table, HBase, Libvirt, OpenVswitch), Amazon (IaaS), Azure (PaaS), GAE (PaaS)

COL740 Software Engineering

4 credits (3-0-2)

Pre-requisites: COL100

Introduction to Software Engineering, Software Life Cycle models and Processes, Requirement Engineering, System Models, Architectural Design, Abstraction & Modularity, Structured Programming, Object-oriented techniques, Design Patterns, Service Oriented Architecture, User Interface Design, Verification and Validation, Reliability, Software Evolution, Project Management & Risk Analysis, Software Quality Management, Configuration Management, Software Metrics, Cost Analysis and Estimation, Manpower Management, Organization and Management of large Software Projects.

COD745 Minor Project

3 credits (0-0-6)

Research and development oriented projects based on problems of practical and theoretical interest. Evaluation done based on periodic presentations, student seminars, written reports, and evaluation of the developed system (if applicable).

COP745 Digital System Design Laboratory

3 credits (0-0-6)

COL750 Foundations of Automatic Verification

4 credits (3-0-2)

A selection from the following topics, and experiments with the mentioned tools:

Review of first-order logic, syntax and semantics. Resolution theorem proving. Binary Decision Diagrams (BDDs) and their use in representing

systems. (Programming exercises coding and using logic programming frameworks). Transition systems, automata and transducers. Buechi and other automata on infinite words; Linear Time Temporal Logic (LTL), and specifying properties of systems in LTL; the relationship between temporal logic and automata on infinite words, LTL Model checking (exercises using Spin or similar tools); Computational Tree Logic (CTL and CTL*); CTL model checking (exercises); Process calculi such as CSP and CCS. Notions of program equivalence -- traces, bisimulation and other notions. Hennessy-Milner Logic (HML) and Mu calculus (exercises using tools such as CWB -- Concurrency Work Bench). Symbolic model checking, exercises using tools such as SMV. Sat-based model checking and Davis-Putnam procedure; (exercises using tools such as nuSMV). Possible additional topics include: equational logic frameworks, real-time frameworks, reactive frameworks, pi-calculus (exercises using tools such as the Mobility Workbench), Tree automata and Weak Second-order Logic with k successors (WSkS), (exercises using Mona or similar tools).

COL751 Algorithmic Graph Theory

3 credits (3-0-0)

Pre-requisites: COL351

Overlaps with: MTL468

Algorithms for computing maximum s-t flows in graphs: augmenting path, blocking flow, push-relabel, capacity scaling etc. Max-flow min-cut theorem and its applications Algorithms for computing min-cuts in graphs, structure of min-cuts. Min-cost flows and applications: cycle cancelling algorithms, successive shortest paths, strongly polynomial algorithms. Maximum matching in bipartite and general graphs: Hall's theorem, Tutte's theorem, Gallai-Edmonds decomposition. Weighted bipartite matching, Edmonds Algorithm for Weighted Non-Bipartite Matching, T-joins and applications. Factor-Critical Graphs, Ear Decompositions, Graph orientations, Splitting Off, k-Connectivity Orientations and Augmentations, Arborescences and Branchings, Edmonds theorem for disjoint arborescences. Planar graphs, algorithms for checking planarity, planar-separator theorem and its applications. Intersection graphs, perfect graphs: polyhedral characterization, the strong perfect graph theorem, kinds of perfect graphs and algorithms on them. Treewidth, algorithm for computing tree width, algorithms on graphs with bounded tree width.

COL752 Geometric Algorithms

3 credits (3-0-0)

Pre-requisites: COL351

Geometric Fundamentals: Models of computation, lower bound techniques, geometric primitives, geometric transforms Convex hulls: Planar convex hulls, higher dimensional convex hulls, randomized, output-sensitive, and dynamic algorithms, applications of convex hull, Intersection detection: segment intersection, line sweep, map overlay, halfspace intersection, polyhedra intersection, Geometric searching: segment, interval, and priority-search trees, point location, persistent data structure, fractional cascading, range searching, nearest-neighbor searching Proximity problems: closest pair, Voronoi diagram, Delaunay triangulation and their subgraphs, spanners, well separated pair decomposition Arrangements: Arrangements of lines and hyperplanes, sweep-line and incremental algorithms, lower envelopes, levels, and zones, applications of arrangements Triangulations: monotone and simple polygon triangulations, point-set triangulations, optimization criteria, Steiner triangulation, Delaunay refinement Geometric sampling: random sampling and ϵ -nets, ϵ -approximation and discrepancy, cuttings, coresets Geometric optimization: linear programming, LP-type problems, parametric searching, approximation techniques. Implementation Issues : robust computing, perturbation techniques, floating-point filters, rounding techniques.

COL753 Complexity Theory

3 credits (3-0-0)

Pre-requisites: COL352

Modeling computation (Finite state machines, Non-determinism, Turing machines, class P etc.), NP and NP-completeness, Diagonalization (Time hierarchy and Ladner's theorem), Space complexity (PSPACE, NL, Savitch's theorem, Immerman-Szelepcsenyi theorem etc.),

Polynomial hierarchy, Boolean circuits (P/poly), Randomized classes (RP, BPP, ZPP, Adleman's Theorem, Gács-Sipser-Lautemann Theorem), Interactive proofs (Arthur-Merlin, $IP=PSPACE$), Cryptography (one-way functions, pseudorandom generators, zero knowledge), PCP theorem and hardness of approximation, Circuit lower bounds (Hastad's switching lemma), Other topics (#P, Toda's theorem, Average-case complexity, derandomization, pseudorandom construction).

COL754 Approximation Algorithms

3 credits (3-0-0)

Pre-requisites: COL351

NP-hardness and approximation algorithms. Different kinds of approximability.

Greedy algorithm and local search with applications in facility location, TSP and scheduling. Dynamic programming with applications in knapsack, Euclidean TSP, bin packing. Linear programming, duality and rounding. Applications in facility location, Steiner tree and bin packing. Randomized rounding with applications. Primal-dual algorithms and applications in facility location and network design. Cuts and metrics with applications to multi-commodity flow. Semi-definite programming and applications: max-cut, graph coloring. Hardness of approximation.

COL756 Mathematical Programming

3 credits (3-0-0)

Pre-requisites: COL351

Overlaps with: MTL103 MAL638 MAL726 MTL704

Linear programming: introduction, geometry, duality, sensitivity analysis. Simplex method, Large scale optimization, network simplex. Ellipsoid method, problems with exponentially many constraints, equivalence of optimization and separation. Convex sets and functions – cones, hyperplanes, norm balls, generalized inequalities and convexity, perspective and conjugate functions. Convex optimization problems – quasi-convex, linear, quadratic, geometric, vector, semi-definite. Duality – Lagrange, geometric interpretation, optimality conditions, sensitivity analysis. Applications to approximation, fitting, statistical estimation, classification. Unconstrained minimization, equality constrained minimization and interior point methods. Integer Programming: formulations, complexity, duality. Lattices, geometry, cutting plane and branch and bound methods. Mixed integer optimization.

COL757 Model Centric Algorithm Design

4 credits (3-0-2)

Pre-requisites: COL351

The RAM model and its limitations, Introduction to alternate algorithmic models Parallel models like PRAM and Interconnection networks; Basic problems like Sorting, Merging, Routing, Parallel Prefix and applications, graph algorithms like BFS, Matching

Memory hierarchy models; Caching, Sorting, Merging, FFT, Permutation, Lower bounds Data Structures - searching, Priority queues

Streaming Data models: Distinct items, frequent items, frequency moments, estimating norms, clustering

On line algorithms: competitive ratio, list accessing, paging, k-server, load-balancing, lower-bounds.

COL758 Advanced Algorithms

4 credits (3-0-2)

Pre-requisites: COL351

Advanced data structures: self-adjustment, persistence and multidimensional trees. Randomized algorithms: Use of probabilistic inequalities in analysis, Geometric algorithms: Point location, Convex hulls and Voronoi diagrams, Arrangements applications using examples. Graph algorithms: Matching and Flows. Approximation algorithms: Use of Linear programming and primal dual, Local search heuristics. Parallel algorithms: Basic techniques for sorting, searching, merging, list ranking in PRAMs and Interconnection networks.

COL759 Cryptography & Computer Security

3 credits (3-0-0)

Pre-requisites: COL351 MTL106

Overlaps with: MAL724 MAL730 MAL786

Part 1: Foundations: Perfect secrecy and its limitations, computational security, pseudorandom generators and one time encryption, pseudorandom functions, one way permutations, message authentication and cryptographic hash functions.

Part 2: Basic Constructions and proofs: Some number theory, symmetric key encryption, public key encryption, CPA and CCA security, digital signatures, oblivious transfer, secure multiparty computation.

Part 3: Advanced Topics: Zero knowledge proofs, identity based encryption, broadcast encryption, homomorphic encryption, lattice based cryptography.

COL760 Advanced Data Management

4 credits (3-0-2)

Pre-requisites: CSL362

Storage and file structures, advanced query processing and optimization for single server databases, distributed data management (including distributed data storage, query processing and transaction management), web-data management (including managing the web-graph and implementation of web-search), big data systems.

COL762 Database Implementation

4 credits (3-0-2)

Pre-requisites: COL362

Review of Relational Model, Algebra and SQL, File structures, Constraints and Triggers, System Aspects of SQL, Data Storage, Representing Data Elements, Index, Multi dimensional and Bit-map Indexes, Hashing, Query Execution, Query Compiler.

COL765 Logic and Functional Programming

4 credits (3-0-2)

Pre-requisites: COL100

Introduction to declarative programming paradigms. The functional style of programming, paradigms of developments of functional programs, use of higher order functionals and pattern-matching. Introduction to lambda calculus. Interpreters for functional languages and abstract machines for lazy and eager lambda calculi, Types, type-checking and their relationship to logic. Logic as a system for declarative programming. The use of pattern-matching and programming of higher order functions within a logic programming framework. Introduction to symbolic processing. The use of resolution and theorem-proving techniques in logic programming. The relationship between logic programming and functional programming.

COL768 Wireless Networks

4 credits (3-0-2)

Radio signal propagation, advanced modulation and coding, medium access techniques, self-configurable networks, mesh networks, cognitive radio and dynamic spectrum access networks, TCP over wireless, wireless security, emerging applications.

COL770 Advanced Artificial Intelligence

4 credits (3-0-2)

Pre-requisites: COL106

Overlaps with: COL333/COL864 EE758

Philosophy of artificial intelligence, fundamental and advanced search techniques (A^* , local search, suboptimal heuristic search, search in AND/OR graphs), constraint optimization, temporal reasoning, knowledge representation and reasoning through propositional and first order logic, modern game playing (UCT), planning under uncertainty (Topological value iteration, LAO^* , LRTDP), reinforcement learning, introduction to robotics, introduction to probabilistic graphical models (Bayesian networks, Hidden Markov models, Conditional random fields), machine learning, introduction to information systems (information retrieval, information extraction).

COL772 Natural Language Processing

4 credits (3-0-2)

Pre-requisites: COL106

NLP concepts: Tokenization, lemmatization, part of speech tagging, noun phrase chunking, named entity recognition, coreference resolution, parsing, information extraction, sentiment analysis, question answering, text classification, document clustering, document summarization, discourse, machine translation.

Machine learning concepts: Naïve Bayes, Hidden Markov Models, EM, Conditional Random Fields, MaxEnt Classifiers, Probabilistic Context Free Grammars.

COL774 Machine Learning

4 credits (3-0-2)

*Pre-requisites: MTL106**Overlaps with: COL341 EE709 MAL803*

Supervised learning algorithms: Linear and Logistic Regression, Gradient Descent, Support Vector Machines, Kernels, Artificial Neural Networks, Decision Trees, ML and MAP Estimates, K-Nearest Neighbor, Naive Bayes, Introduction to Bayesian Networks. Unsupervised learning algorithms: K-Means clustering, Gaussian Mixture Models, Learning with Partially Observable Data (EM). Dimensionality Reduction and Principal Component Analysis. Bias Variance Trade-off. Model Selection and Feature Selection. Regularization. Learning Theory. Introduction to Markov Decision Processes. Application to Information Retrieval, NLP, Biology and Computer Vision. Advanced Topics.

COL776 Learning Probabilistic Graphical Models

4 credits (3-0-2)

Pre-requisites: MTL106

Basics: Introduction. Undirected and Directed Graphical Models. Bayesian Networks. Markov Networks. Exponential Family Models. Factor Graph Representation. Hidden Markov Models. Conditional Random Fields. Triangulation and Chordal Graphs. Other Special Cases: Chains, Trees. Inference: Variable Elimination (Sum Product and Max-Product). Junction Tree Algorithm. Forward Backward Algorithm (for HMMs). Loopy Belief Propagation. Markov Chain Monte Carlo. Metropolis Hastings. Importance Sampling. Gibbs Sampling. Variational Inference. Learning: Discriminative Vs. Generative Learning. Parameter Estimation in Bayesian and Markov Networks. Structure Learning. EM: Handling Missing Data. Applications in Vision, Web/IR, NLP and Biology. Advanced Topics: Statistical Relational Learning, Markov Logic Networks.

COL780 Computer Vision

4 credits (3-0-2)

*Pre-requisites: EC 80**Overlaps with: EEL804*

Camera models. Calibration, multi-views projective geometry and invariants. Feature detection, correspondence and tracking. 3D structure/motion estimation. Application of machine learning in object detection and recognition, category discovery, scene and activity interpretation.

COL781 Computer Graphics

4.5 credits (3-0-3)

Graphics pipeline; Graphics hardware: Display devices, Input devices; Raster Graphics: line and circle drawing algorithms; Windowing and 2D/3D clipping: Cohen and Sutherland line clipping, Cyrus Beck clipping method; 2D and 3D Geometrical Transformations: scaling, translation, rotation, reflection; Viewing Transformations: parallel and perspective projection; Curves and Surfaces: cubic splines, Bezier curves, B-splines, Parametric surfaces, Surface of revolution, Sweep surfaces, Fractal curves and surfaces; Hidden line/surface removal methods; illuminations model; shading: Gouraud, Phong; Introduction to Ray-tracing; Animation; Programming practices with standard graphics libraries like OpenGL.

COL783 Digital Image Analysis

4.5 credits (3-0-3)

Digital Image Fundamentals; Image Enhancement in Spatial Domain: Gray Level Transformation, Histogram Processing, Spatial Filters; Image Transforms: Fourier Transform and their properties, Fast Fourier Transform, Other Transforms; Image Enhancement in Frequency Domain; Color Image Processing; Image Warping and Restoration; Image Compression; Image Segmentation: edge detection, Hough transform, region based segmentation; Morphological operators; Representation and Description; Features based matching and Bayes classification; Introduction to some computer vision techniques: Imaging geometry, shape from shading, optical flow; Laboratory exercises will emphasize development and evaluation of image processing methods.

COL788 Advanced Topics in Embedded Computing

3 credits (3-0-0)

*Pre-requisites: COL216 OR ELL305 OR MEL342 COL331 OR ELL405**Overlaps with: EEL705*

Embedded Platforms, Embedded processor architectures, System initialization, Embedded operating systems (linux), DSP and graphics acceleration, Interfaces, Device Drivers, Network, Security, Debug support, Performance tuning.

The course would involve substantial programming assignments on embedded platforms.

COL799 Independent Study

3 credits (0-3-0)

Research oriented activities or study of advanced subjects outside regular course offerings under the guidance of a faculty member. Prior to registration, a detailed plan of work should be submitted by the student, in concurrence with a faculty guide, to the Head of the Department for approval.

COL812 System Level Design and Modelling

3 credits (3-0-0)

Embedded systems and system-level design, models of computation, specification languages, hardware/software co-design, system partitioning, application specific processors and memory, low power design.

COL818 Principles of Multiprocessor Systems

4 credits (3-0-2)

*Pre-requisites: COL216 CSL356 COL331**Overlaps with: COL718 COL730*

(i) Mutual Exclusion (ii) Coherence and Consistency (iii) Register Constructions (iv) Power of Synchronization Operations (v) Locks and Monitors (vi) Concurrent queues (vii) Futures and Work-Stealing (viii) Barriers (ix) Basics of Transactional Memory (TM) (x) Regular Hardware TMs (xi) Unbounded Hardware TMs (xii) Software TMs.

COL819 Advanced Distributed Systems

4 credits (3-0-2)

*Pre-requisites: COL331 COL334 COL380**Overlaps with: COL380 CSL847*

Epidemic/Gossip based algorithms, Peer to peer networks, Distributed hash tables, Synchronization, Mutual exclusion, Leader election, Distributed fault tolerance, Large scale storage systems, Distributed file systems, Design of social networking systems.

COL821 Reconfigurable Computing

3 credits (3-0-0)

FPGA architectures, CAD for FPGAs: overview, LUT mapping, timing analysis, placement and routing, Reconfigurable devices - from fine-grained to coarse-grained devices, Reconfiguration modes and multi-context devices, Dynamic reconfiguration, Compilation from high level languages, System level design for reconfigurable systems: heuristic

temporal partitioning and ILP-based temporal partitioning, Behavioral synthesis, Reconfigurable example systems' tool chains.

COL829 Advanced Computer Graphics

4 credits (3-0-2)

Pre-requisites: COL781

Rendering: Ray tracing, Radiosity methods, Global illumination models, Shadow generation, Mapping, Anti-aliasing, Volume rendering, Geometrical Modeling: Parametric surfaces, Implicit surfaces, Meshes, Animation: spline driven, quaternions, articulated structures (forward and inverse kinematics), deformation- purely geometric, physically-based, Other advanced topics selected from research papers.

COL830 Distributed Computing

3 credits (3-0-0)

Models of Distributed Computing; Basic Issues: Causality, Exclusion, Fairness, Independence, Consistency; Specification of Distributed Systems: Transition systems, petri nets, process algebra properties: Safety, Liveness, stability.

COL831 Semantics of Programming Languages

3 credits (3-0-0)

Study of operational, axiomatic and denotational semantics of procedural languages; semantics issues in the design of functional and logic programming languages, study of abstract data types.

COL832 Proofs and Types

3 credits (3-0-0)

Syntax and semantic foundations: Ranked algebras, homomorphisms, initial algebras, congruences. First-order logic review: Soundness, completeness, compactness. Herbrand models and Herbrand's theorem, Horn-clauses and resolution. Natural deduction and the Sequent calculus. Normalization and cut elimination. Lambda-calculus and Combinatory Logic: syntax and operational semantics (beta-eta equivalence), confluence and Church-Rosser property. Introduction to Type theory: The simply-typed lambda-calculus, Intuitionistic type theory. Curry-Howard correspondence. Polymorphism, algorithms for polymorphic type inference, Girard and Reynolds' System F. Applications: type-systems for programming languages; modules and functors; theorem proving, executable specifications.

COL851 Special Topics in Operating Systems

3 credits (3-0-0)

Pre-requisites: COL331

To provide insight into current research problems in the area of operating systems. Topics may include, but are not limited to, OS design, web servers, Networking stack, Virtualization, Cloud Computing, Distributed Computing, Parallel Computing, Heterogeneous Computing, etc.

COL852 Special Topics in COMPILER DESIGN

3 credits (3-0-0)

Pre-requisites: COL728

Special topic that focuses on state of the art and research problems of importance in this area.

COL859 Advanced Computer Graphics

4 credits (3-0-2)

Rendering: Ray tracing, Radiosity methods, Global illumination models, Shadow generation, Mapping, Anti-aliasing, Volume rendering, Geometrical Modeling: Parametric surfaces, Implicit surfaces, Meshes, Animation: spline driven, quaternions, articulated structures (forward and inverse kinematics), deformation — purely geometric, physicallybased, Other advanced topics selected from research papers.

COL860 Special Topics in Parallel Computation

3 credits (3-0-0)

The course will focus on research issues in areas like parallel computation models, parallel algorithms, Parallel Computer architectures and interconnection networks, Shared memory parallel

architectures and programming with OpenMP and Ptheards, Distributed memory message-passing parallel architectures and programming, portable parallel message-passing programming using MPI. This will also include design and implementation of parallel numerical and non-numerical algorithms for scientific and engineering, and commercial applications. Performance evaluation and benchmarking high-performance computers.

COL861 Special Topics in Hardware Systems

3 credits (3-0-0)

Under this topic one of the following areas will be covered: Fault Detection and Diagnosability. Special Architectures. Design Automation Issues. Computer Arithmetic, VLSI.

COL862 Special Topics in Software Systems

3 credits (3-0-0)

Special topic that focuses on state of the art and research problems of importance in this area.

COL863 Special Topics in Theoretical Computer Science

3 credits (3-0-0)

Under this topic one of the following areas will be covered: Design and Analysis of Sequential and Parallel Algorithms. Complexity issues, Trends in Computer Science Logic, Quantum Computing and Bioinformatics, Theory of computability. Formal Languages. Semantics and Verification issues.

COL864 Special Topics in Artificial Intelligence

3 credits (3-0-0)

Pre-requisites: COL333 or equivalent

Potential topics or themes which may be covered (one topic per offering) include: information extraction, industrial applications of AI, advanced logic-based AI, Markov Decision Processes, statistical relational learning, etc.

COL865 Special Topics in Computer Applications

3 credits (3-0-0)

Special topic that focuses on special topics and research problems of importance in this area. These may include applications in Neuroimaging, MOOC education etc.

COL866 Special Topics in Algorithms

3 credits (3-0-0)

The course will focus on specialized topics in areas like Computational Topology, Manufacturing processes, Quantum Computing, Computational Biology, Randomized algorithms and other research intensive topics.

COL867 Special Topics in High Speed Networks

3 credits (3-0-0)

The course will be delivered through a mix of lectures and paper reading seminars on advanced topics in Computer Networks. Hands-on projects will be conceptualized to challenge students to take up current research problems in areas such as software defined networking, content distribution, advanced TCP methodologies, delay tolerant networking, data center networking, home networking, green networking, clean state architecture for the Internet, Internet of things, etc.

COL868 Special topics in Database Systems

3 credits (3-0-0)

The contents would include specific advanced topics in Database Management Systems in which research is currently going on in the department. These would be announced every time the course is offered.

COL869 Special topics in Concurrency

3 credits (3-0-0)

The course will focus on research issues in concurrent, distributed and mobile computations. Some of the following topics will be covered:

Models of Concurrent, Distributed and Mobile computation. Process calculi, Event Structures, Petri Nets and labeled transition systems. Implementations of concurrent and mobile, distributed programming languages. Logics and specification models for concurrent and mobile systems. Verification techniques and algorithms for model checking. Type systems for concurrent/mobile programming languages. Applications of the above models and techniques.

COL870 Special Topics in Machine Learning

3 credits (3-0-0)

Contents may vary based on the instructor's expertise and interests within the broader area of Machine Learning. Example topics include (but not limiting to) Statistical Relational Learning, Markov Logic, Multiple Kernel Learning, Multi-agent Systems, Multi-Class Multi-label Learning, Deep Learning, Sum-Product Networks, Active and Semi-supervised Learning, Reinforcement Learning, Dealing with Very High-Dimensional Data, Learning with Streaming Data, Learning under Distributed Architecture.

COL871 Special Topics in programming languages & Compilers

3 credits (3-0-0)

Pre-requisites: COL728

Contents may vary based on the instructor's interests within the broader area of Programming Languages and Compilers.

COL872 Special Topics in Cryptography

3 credits (3-0-0)

Pre-requisites: COL759

Contents may vary based on the instructor's interests within the broader area of Cryptography. Examples include CCA secure encryption, multiparty computation, leakage resilient cryptography, broadcast encryption, fully homomorphic encryption, obfuscation, functional encryption, zero knowledge, private information retrieval, byzantine agreement, cryptography against extreme attacks etc.

COL872 Special Topics in Cryptography

3 credits (3-0-0)

Pre-requisites: COL759

Contents may vary based on the instructor's interests within the broader area of Cryptography. Examples include CCA secure encryption, multiparty computation, leakage resilient cryptography, broadcast encryption, fully homomorphic encryption, obfuscation, functional encryption, zero knowledge, private information retrieval, byzantine agreement, cryptography against extreme attacks etc.

COV877 Special Module on Visual Computing

1 credit (1-0-0)

The course will be a seminar-based course where the instructor would present topics in a selected theme in the area of visual computing through research papers. Students will also be expected to participate in the seminar.

COV877 Special Module on Visual Computing

1 credit (1-0-0)

The course will be a seminar-based course where the instructor would present topics in a selected theme in the area of visual computing through research papers. Students will also be expected to participate in the seminar.

COV878 Special Module in Machine Learning

1 credit (1-0-0)

Contents may vary based on the instructor's expertise and interests within the broader area of Machine Learning. Example topics include (but not limiting to) Statistical Relational Learning, Markov Logic, Multiple Kernel Learning, Multi-agent Systems, Multi-Class Multi-label Learning, Deep Learning, Sum-Product Networks, Active and Semi-supervised Learning, Reinforcement Learning, Dealing with Very High-Dimensional Data, Learning with Streaming Data, Learning under Distributed Architecture.

COV878 Special Module in Machine Learning

1 credit (1-0-0)

Contents may vary based on the instructor's expertise and interests within the broader area of Machine Learning. Example topics include (but not limiting to) Statistical Relational Learning, Markov Logic, Multiple Kernel Learning, Multi-agent Systems, Multi-Class Multi-label Learning, Deep Learning, Sum-Product Networks, Active and Semi-supervised Learning, Reinforcement Learning, Dealing with Very High-Dimensional Data, Learning with Streaming Data, Learning under Distributed Architecture.

COV879 Special Module in Financial Algorithms

2 credits (2-0-0)

Pre-requisites: MTL106

The indicative contents will be from a mix of the following Model Independent Results (10%):

Vanilla/Exotic Options and Binomial Pricing (15%)

Stochastic Calculus (10%)

Black-Scholes (10%)

Statistical Arbitrage (10%)

Structured Products (10%)

VIX (10%)

Martingales (10%)

Trading Strategies (15%)

The class will have a project where students will be asked to come up with a trading strategy for a market scenario of their choice. For this project, students will organize as team of 2 or more. Students will make presentations on the strategy.

COV879 Special Module in Financial Algorithms

2 credits (2-0-0)

Pre-requisites: MTL106

Overlaps with: MTL732 MTL733

The indicative contents will be from a mix of the following

Model Independent Results (10%):

Vanilla/Exotic Options and Binomial Pricing (15%)

Stochastic Calculus (10%)

Black-Scholes (10%)

Statistical Arbitrage (10%)

Structured Products (10%)

VIX (10%)

Martingales (10%)

Trading Strategies (15%)

The class will have a project where students will be asked to come up with a trading strategy for a market scenario of their choice. For this project, students will organize as team of 2 or more. Students will make presentations on the strategy.

COV880 Special Module in Parallel Computation

1 credit (1-0-0)

COV881 Special Module in Hardware Systems

1 credit (1-0-0)

Special module that focuses on special topics and research problems of importance in this area.

COV882 Special Module in Software Systems

1 credit (1-0-0)

COV883 Special Module in Theoretical Computer Science

1 credit (1-0-0)

COV884 Special Module in Artificial Intelligence

1 credit (1-0-0)

COV885 Special Module in Computer Applications

1 credit (1-0-0)

COV886 Special Module in Algorithms

1 credit (1-0-0)

COV887 Special Module in High Speed Networks

1 credit (1-0-0)

COV888 Special Module in Database Systems

1 credit (1-0-0)

COV889 Special Module in Concurrency

1 credit (1-0-0)

COD891 M.Tech Mini-Project

3 credits (0-0-6)

COD891 Minor Project

3 credits (0-0-6)

COD892 M.Tech Project Part I

7 credits (0-0-14)

COD893 M.Tech Project Part II

14 credits (0-0-28)

Department of Electrical Engineering

ELL100 Introduction to Electrical Engineering

4 credits (3-0-2)

Elements in an Electrical circuit: R, L, C, Diode, Voltage and current sources (independent and dependent/controlled sources with examples). DC circuits, KCL, KVL, Network theorems, Mesh and nodal analysis. Step response in RL, RC, RLC circuits. Phasor analysis of AC circuits. Single phase and 3-phase circuits. Two port network, BJT: CE and small signal model, Operational amplifiers: Model and applications. Introduction to Digital circuits. Magnetic circuits, Transformers: Modeling and analysis; parameter determination. Energy in magnetic field. Electromechanical energy conversion principles with examples. Principles of measurement of voltage, current and power.

Laboratory component and the List of experiments.

CRO (mechanism and usage). KCL, KVL, Network theorem verification. Step/ transient response of RL, RC, RLC, circuits. Steady state response of Circuits of sinusoidal excitation. Diode experiment (clipping, clamping and rectification). Basic circuits using opamp. Transformers OC and SC tests. BH loop in an iron core, DC and AC motor – for observation only. A small mini-project.

ELL201 Digital Electronics

4.5 credits (3-0-3)

Prerequisite(s): EEL 100

Gates, binary number systems, arithmetic operations. Minimization using K-maps, reduced K-maps, tabular methods; design using multiplexers, decoders, and ROMs. Latches, flip-flops, registers and counters. Asynchronous, synchronous counters. Finite state machines, implementations thereof. Mealy, Moore machines. Clock period computation. Memories. Partitioning and pipelining. VHDL/Verilog, the register-transfer-level description style. Switch level introduction to logic families, CMOS logic, static, pre-charge and clocked logic. Asynchronous circuits and design styles.

ELL202 Circuit Theory

4 credits (3-1-0)

Prerequisite(s): ELL100

Overview of network analysis techniques, network theorems, transient and steady-state sinusoidal response. Network graphs and their applications in network analysis. Tellegen's theorem, two-port networks, Z, Y, h, g, and transmission matrices. Combining two ports in various configurations. Analysis of transmission lines to motivate the scattering matrix. Scattering matrix and its applications in network analysis. Network functions, positive real functions, and network synthesis. Butterworth and Chebyshev approximations. Synthesis of lossless two-port networks. Synthesis of lattice all-pass filters.

ELL203 Electromechanics

4 credits (3-1-0)

Prerequisite(s): EEL 100

Review: AC Circuits, Complex representation and Power Measurement.

Magnetic Circuits: Simple magnetic circuit, analogy between magnetic circuits and electrical circuits, linear and nonlinear magnetic circuits, hysteresis and eddy current losses, permanent magnet materials.

Transformers: Single-phase and three-phase, analysis, equivalent circuit, Tests on transformers, phasor diagram regulation and efficiency, auto-transformer and instrument transformers (PT/CT).

Electro-mechanical energy conversion principles: Force and EMF production in a rotating machine.

DC machines: Types, construction, working principle, characteristics and applications.

3-phase induction machines: Types, construction, Introduction to windings and winding factor, production of revolving magnetic field, working principle on 3-phase induction machine, equivalent circuit, characteristics, phasor diagram and applications.

3-phase synchronous machines: Types, construction, working principle, equivalent circuit, characteristics, phasor diagram and applications.

Fractional-HP and Special Machines.

ELP203 Electromechanics Laboratory

1.5 credits (0-0-3)

Prerequisite(s): ELL100

ELL205 Signals and Systems

4 credits (3-1-0)

Motivation & orientation, Classifications of signals & systems, Dynamic representation of LTI systems (discrete & continuous-time systems), Fourier analysis of continuous-time signals & systems, Fourier analysis of discrete-time signals & systems, Nyquist sampling theorem, Laplace transform, The z-transform, Introduction to probability, random variables and stochastic processes.

ELL211 Physical Electronics

3 credits (3-0-0)

Prerequisite(s): ELL100 and PYL100

Overlaps with: EEL732, ELL231, EPL336, EPL439, PHL653, PHL704, PHL705, PHL727, PHL793

Semiconductor materials, crystal structure, carriers in semiconductors, band structure, density of states, excitons, doping and carrier statistics, carrier transport, recombination and generation, p-n junction physics: built-in potential, forward and reverse bias, capacitance, diode currents, breakdown, tunnel effects; metal-semiconductor junctions; BJTs: current gain/Gummel plots, transistor models, breakdown; MOSFET physics: MOS capacitors, inversion, depletion, accumulation, flatband, threshold voltage, long-channel model, saturation, short-channel models, sub-threshold conduction, SPICE models for MOSFETs; optoelectronic device physics, LEDs/OLEDs, lasers, photodetectors, solar cells.

ELL211 Physical Electronics

3 credits (3-0-0)

Pre-requisites: ELL100 and PYL100

Overlaps with: ELL732, ELL231, EPL336, EPL439, PHL653, PHL704, PHL705, PHL727, PHL793

Semiconductor materials, crystal structure, carriers in semiconductors, band structure, density of states, excitons, doping and carrier statistics, carrier transport, recombination and generation, p-n junction physics: built-in potential, forward and reverse bias, capacitance, diode currents, breakdown, tunnel effects; metal-semiconductor junctions; BJTs: current gain/Gummel plots, transistor models, breakdown; MOSFET physics: MOS capacitors, inversion, depletion, accumulation, flatband, threshold voltage, long-channel model, saturation, short-channel models, sub-threshold conduction, SPICE models for MOSFETs; optoelectronic device physics, LEDs/OLEDs, lasers, photodetectors, solar cells.

ELL212 Engineering Electromagnetics

4 credits (3-1-0)

Prerequisite(s): PYL100

Review of Maxwell's equations, wave propagations in unbounded medium. Boundary conditions, reflection and refraction of plane waves. Evanescent waves and surface plasmons. Waveguides: parallel-plane guide, TE, TM and TEM waves, rectangular and cylindrical waveguides, resonators. Dielectric guides and optical fibres. Transmission Lines: distributed parameter circuits, traveling and standing waves, impedance matching, Smith chart, analogy with plane waves. Planar transmission lines: stripline, micro stripline. Radiation: retarded potentials, Hertzian dipole, short loop, antenna parameters. Numerical techniques in electromagnetics.

ELL212 Electromagnetics

4 credits (3-1-0)

Pre-requisites: PYL100

Review of Maxwell's equations, wave propagations in unbounded medium. Boundary conditions, reflection and refraction of plane waves. Evanescent waves and surface plasmons. Waveguides: parallel-plane guide, TE, TM and TEM waves, rectangular and cylindrical waveguides,

resonators. Dielectric guides and optical fibres. Transmission Lines: distributed parameter circuits, traveling and standing waves, impedance matching, Smith chart, analogy with plane waves. Planar transmission lines: stripline, micro stripline. Radiation: retarded potentials, Hertzian dipole, short loop, antenna parameters. Numerical techniques in electromagnetics.

ELP212 Electromagnetics Laboratory

1.5 credits (0-0-3)

Prerequisite(s): ELL212

ELL225 Control Engineering-I

4 credits (3-1-0)

Prerequisite(s): ELL205

Introduction to the control problem, Control System Components: Sensors, Actuators, Computational blocks. Mathematical representation of systems, state variable model, linearization, transfer function model. Transfer function and state variable models of suitable mechanical, electrical, thermal and pneumatic systems. Closed loop systems, Block diagram and signal flow analysis, Basic Characteristics of feedback control systems: stability, steady-state accuracy, transient accuracy, disturbance rejection, sensitivity analysis and robustness. Basic modes of feedback control: Proportional, Integral, Derivative. Concept of stability, Stability criteria: Routh stability criterion, Mikhailov's criterion, Kharitonov theorem. Time response of 2nd order system, steady state error analysis. Performance specifications in the time domain. Root locus method of design. Nyquist stability criterion. Frequency response analysis: Nyquist plots, Bode plots, Nichols Charts, Performance specifications in frequency domain, Frequency domain methods of design. Lead lag compensation.

ELL225 Control Engineering

4 credits (3-1-0)

Pre-requisites: ELL205

Overlaps with: MEE312, CHL261

Introduction to the control problem, Control System Components: Sensors, Actuators, Computational blocks. Mathematical representation of systems, state variable model, linearization, transfer function model. Transfer function and state variable models of suitable mechanical, electrical, thermal and pneumatic systems. Closed loop systems, Block diagram and signal flow analysis, Basic Characteristics of feedback control systems: stability, steady-state accuracy, transient accuracy, disturbance rejection, sensitivity analysis and robustness. Basic modes of feedback control: Proportional, Integral, Derivative. Concept of stability, Stability criteria: Routh stability criterion, Mikhailov's criterion, Kharitonov theorem. Time response of 2nd order system, steady state error analysis. Performance specifications in the time domain. Root locus method of design. Nyquist stability criterion. Frequency response analysis: Nyquist plots, Bode plots, Nichols Charts, Performance specifications in frequency domain, Frequency domain methods of design. Lead lag compensation.

ELP225 Control Engineering Laboratory

1.5 credits (0-0-3)

Prerequisite(s): ELL225

Basics of Sensors and Actuators, Study of AC and DC Motors, Linear Systems, Analog and Digital Motors, Synchros, Temperature Control.

ELP225 Control Engineering Laboratory

1.5 credits (0-0-3)

Pre-requisites: ELL225

Basics of Sensors and Actuators, Study of AC and DC Motors, Linear Systems, Analog and Digital Motors, Synchros, Temperature Control.

ELL231 Power Electronics and Energy Devices

4 credits (3-1-0)

Prerequisite(s): ELL100

Introduction to semiconductor basics and PN Junctions. Short introduction to power device technology, PIN diodes, Schottky diodes,

Power BJTs, Power MOSFETs, IGBTs, Thyristors, Wide bandgap power semiconductor devices, Packaging and Reliability of Power devices, Destructive mechanisms in power devices, Power device induced oscillations and Electromagnetic disturbances, Selection of power devices in power electronic systems, Smart power integrated circuits.

ELL231 Power Electronics and Energy Devices

3 credits (3-0-0)

Pre-requisites: ELL100

Introduction to semiconductor basics and PN Junctions. Short introduction to power device technology, PIN diodes, Schottky diodes, Power BJTs, Power MOSFETs, IGBTs, Thyristors, Wide bandgap power semiconductor devices, Packaging and Reliability of Power devices, Destructive mechanisms in power devices, Power device induced oscillations and Electromagnetic disturbances, Selection of power devices in power electronic systems, Smart power integrated circuits.

ELL301

Basics of Measurement and Instrumentation, Instrument Examples: Galvanometer, Accelerometer etc; calibration methods, Voltage and Current Measurements; Theory, calibration, application, Errors and compensation. Power and Energy Measurement and its errors, Methods of correction, LPF wattmeter, Phantom loading, Induction type KWH meter; Calibration of wattmeter, energy meter. Potentiometer and Instrument Transformer: DC and AC potentiometer, C.T and V.T construction, theory, operation, characteristics. Digital Instrumentation.

ELL301 Electrical and Electronic Instrumentation

3 credits (3-0-0)

Pre-requisites: ELL100

Basics of Measurement and Instrumentation, Instrument Examples : Galvanometer, Accelerometer etc; calibration methods, Voltage and Current Measurements; Theory, calibration, application, Errors and compensation. Power and Energy Measurement and its errors , Methods of correction , LPF wattmeter , Phantom loading , Induction type KWH meter ; Calibration of wattmeter, energy meter. Potentiometer and Instrument Transformer :DC and AC potentiometer, C.T and V.T construction, theory, operation, characteristics. Digital Instrumentation.

ELL302 Power Electronics

3 credits (3-0-0)

Prerequisite(s): ELL231 (EE3) / ELL211 (EE1)

Introduction to Power Electronics devices and protection: Thyristor family devices, principle of operation, IGBT operation, principles and ratings. Snubber designs, selection and protection, Firing circuits.

AC-DC converters: uncontrolled, semi-controlled, fully controlled and dual converters in single-phase and three-phase configurations, design, phase control, harmonic analysis, firing circuits and their designs. Improved power quality AC-DC converters.

Choppers: Introduction to dc-dc conversion, various topologies, buck, boost, buck-boost converters, High frequency isolated dc-dc converters: design problems, PWM control and operation.

Inverters: Basics of dc to ac conversion, inverter circuit configurations and principle of operation, VSI and CSI, single and three-phase configurations, Square wave and sinusoidal PWM control methods and harmonic control. Design problems.

AC voltage controllers: Introduction to ac to ac conversion, single-phase and three-phase ac voltage controller circuit configurations, applications, advantages, harmonic analysis, control, design problems.

Cyclo-converters: single-phase to single-phase, three-phase to single-phase, three-phase to three-phase and single-phase to three-phase circuit configurations thyristors and triacs.

ELL302 Power Electronics

3 credits (3-0-0)

Pre-requisites: ELL231 (EE3) / ELL211 (EE1)

Introduction to Power Electronics devices and protection: Thyristor family devices, principle of operation, IGBT operation, principles and ratings. Snubber designs, selection and protection, Firing circuits.

AC-DC converters: uncontrolled, semi-controlled, fully controlled and dual converters in single-phase and three-phase configurations, design, phase control, harmonic analysis, firing circuits and their designs. Improved power quality AC-DC converters.

Choppers: Introduction to dc-dc conversion, various topologies, buck, boost, buck-boost converters, High frequency isolated dc-dc converters: design problems, PWM control and operation.

Inverters: Basics of dc to ac conversion, inverter circuit configurations and principle of operation, VSI and CSI, single and three-phase configurations, Square wave and sinusoidal PWM control methods and harmonic control. Design problems.

AC voltage controllers: Introduction to ac to ac conversion, single-phase and three-phase ac voltage controller circuit configurations, applications, advantages, harmonic analysis, control, design problems.

Cyclo-converters: single-phase to single-phase, three-phase to single-phase, three-phase to three-phase and single-phase to three-phase circuit configurations thyristors and triacs.

ELP302 Power Electronics Laboratory

1.5 credits (0-0-3)

Prerequisite(s): ELL231

ELP302 Power Electronics Laboratory

1.5 credits (0-0-3)

Pre-requisites: ELL302

ELL303 Power Engineering-I

4 credits (3-1-0)

Prerequisite(s): ELL100, ELL203

Introduction to the basic structure of power system along with various power generation technologies. Modeling of generators, transformers and transmission line for power system analysis. per unit system. Power flow analysis. Fault analysis in power systems. Power system stability studies. Transients in power system and travelling waves. Introduction to power system relaying and brief idea of over current, differential and impedance based protection. Basic concepts of Power system operation and control. Introduction to HVDC and FACTS.

ELL303 Power Engineering-I

4 credits (3-1-0)

Pre-requisites: ELL100, ELL203

Introduction to the basic structure of power system along with various power generation technologies. Modeling of generators, transformers and transmission line for power system analysis. per unit system. Power flow analysis. Fault analysis in power systems. Power system stability studies. Transients in power system and travelling waves. Introduction to power system relaying and brief idea of over current, differential and impedance based protection. Basic concepts of Power system operation and control. Introduction to HVDC and FACTS.

ELP303 Power Engineering Laboratory

1.5 credits (0-0-3)

Prerequisite(s): ELL303

Experiments will be conducted on 3-phase alternators and transformers for measuring their sequence impedance. Directional, overcurrent and differential protection relays will be studied. Computer simulation for power flow, short circuit and stability studies of interconnected power systems. Numerical relays and synchrophasors will be introduced. FACTS devices will be experimented.

ELP303 Power Engineering Laboratory

1.5 credits (0-0-3)

Pre-requisites: ELP303

Experiments will be conducted on 3-phase alternators and transformers for measuring their sequence impedance. Directional, overcurrent and differential protection relays will be studied. Computer simulation for power flow, short circuit and stability studies of interconnected power systems. Numerical relays and synchrophasors will be introduced. FACTS devices will be experimented.

ELL304 Analog Electronic Circuits

5.5 credits (3-1-3)

Prerequisite(s): ELL100, ELL202, ELL211, ELL231

Review of working of BJT and MOSFET, large signal and small signal models, biasing schemes, analysis and design of various single stage amplifier configuration, low and high frequency analysis of single stage amplifiers, frequency compensation, current mirrors, multistage amplifiers; differential and operational amplifiers, negative and positive feedback, oscillators and power amplifiers.

ELL304 Analog Electronics

5.5 credits (3-1-3)

Pre-requisites: ELL100, ELL202, ELL211, ELL231

Review of working of BJT and MOSFET, large signal and small signal models, biasing schemes, analysis and design of various single stage amplifier configuration, low and high frequency analysis of single stage amplifiers, frequency compensation, current mirrors, multistage amplifiers; differential and operational amplifiers, negative and positive feedback, oscillators and power amplifiers.

ELL305 Computer Architecture

3 credits (3-0-0)

Prerequisite(s): ELL201

Overlaps with: CSL211

Introduction: Performance measurement, Instruction Set Architecture, Computer Arithmetic, Processor: ALU design, Control design, Pipelining, Memory Hierarchy, I/O management, Multicores, Multiprocessors, Clusters, GPU.

ELL305 Computer Architecture

3 credits (3-0-0)

Pre-requisites: ELL201

Overlaps with: CSL211

Introduction: Performance measurement, Instruction Set Architecture, Computer Arithmetic.

Processor: ALU design, Control design, Pipelining

Memory Hierarchy, I/O management, Multicores, Multiprocessors, Clusters, GPU.

ELP305 Design and System Laboratory

1.5 credits (0-0-3)

ELL306 Electrical and Electronic Instrumentation

3 credits (3-0-0)

Prerequisite(s): ELL100

ELS310 Independent Study (EL)

3 credits (0-3-0)

ELS310 Independent Study (EE1)

3 credits (0-3-0)

ELL311 Communication Engineering

4 credits (3-1-0)

Prerequisite(s): ELL205

Review of Fourier Series and Transforms. Hilbert Transforms, Bandpass Signal and System Representation. Random Processes, Stationarity, Power Spectral Density, Gaussian Process, Noise. Amplitude Modulation, DSBSC, SSB, VSB: Signal Representation, Generation and Demodulation. Frequency Modulation: Signal Representation, Generation and Demodulation. Mixing, Superhetrodyne Receiver,

Phase Recovery with PLLs. Noise: in AM Receivers using Coherent Detection, in AM Receivers using Envelope Detection, in FM Receivers. Sampling, Pulse-Amplitude Modulation. Quantization, Pulse-Code Modulation. Noise considerations in PCM, Time Division Multiplexing, Delta Modulation. Intersymbol Interference, Introduction to Information Theory: concepts of Entropy and Source-Coding

ELL311 Communication Engineering

4 credits (3-1-0)

Pre-requisites: ELL205

ELP311 Communication Engineering Laboratory

1 credit (0-0-2)

Prerequisite(s): ELL311

laboratory experiments on analog, pulse, and basic digital modulation and demodulation techniques.

ELL312 Semiconductor process technology

3 credits (3-0-0)

Pre-requisites: ELL211

Overlaps with: ELL784

Semiconductor materials (inorganic and organic), history of semiconductor IC devices, crystal structure, defects, vacancies and interstitials, semiconductor crystal growth, bulk doping methods, purification methods, wafer manufacture, diffusion, surface doping, oxidation, dopant redistribution, ion implantation and annealing, rapid thermal processes, photolithography, masks, photoresists, exposure, e-beam lithography, vacuum systems, gas flow, plasma processes, pumping theory, leaks, vacuum gauges, wet etching, plasma etching, process gas chemistry and polymerization, ion milling, reactive ion etching, lift-off, vapor pressure of materials, evaporation, sputtering, deposition rate and step coverage, codepositions, film growth mechanisms and stress, chemical vapor deposition, metal-organic chemical vapor deposition, atomic layer deposition, molecular beam epitaxy, planarization processes, interconnects, yield and device integration.

ELL313 Antennas and Propagation

3 credits (3-0-0)

Prerequisites: ELL212

Starting from the principle of radiation different types of antenna; wire, slot, planar and their arrays with feeds. Antenna synthesis and design and measurements. Characteristics of propagation of radio waves in different atmospheric layers and study of the losses, fading and scattering of microwave and millimeter waves in the atmosphere.

ELL315 Introduction to Analog Integrated Circuits

3 credits (3-0-0)

Pre-requisites: ELL204, ELL202

Review of basic amplifiers. Current Mirrors, Reference Current and Voltage Sources. CMOS Operational Amplifier: Structure, Analysis and Design, Frequency Response and Compensation Techniques. Switched Capacitor Circuits: Principles of operation, Filter and non filter applications. Sample and Hold Circuits, Comparators. ADC: Characterization, Types of ADC and their relative merits and demerits, Design issues. DAC: Characterization, Types of DAC and their relative merits and demerits, Design issues.

ELL316 Introduction to VLSI Design

3 credits (3-0-0)

Pre-requisites: ELL211

Basic MOS characteristics; Deep sub-micron; velocity saturation; Dynamic MOS characteristics; parasitics; leakage; sizing; propagation delay; Logical effort, path delay, optimization; Ratio-ed logic, Pass transistor logic and parasitics; Dynamic logic, pulsed sequential logic; Logical synthesis, physical design, layout; Introduction to design of VLSI memories.

ELL318 Digital Hardware Design

3 credits (3-0-0)

Pre-requisites: ELL305

Overlaps with: CSL316

Technology basics and digital logic families such as static CMOS, pass transistor, transmission gate, dynamic and domino logic. Advanced sequential logic elements with latch-based design and timing and clocking concepts. Design flows and paradigms. Data path, control and advanced pipeline implementations. Advanced digital arithmetic. Performance evaluation.

ELL319 Digital Signal Processing

4 credits (3-0-2)

Pre-requisites: ELL205

Review of Signals and Systems, Sampling and data reconstruction processes. Z transforms. Discrete linear systems. Frequency domain design of digital filters. Quantization effects in digital filters. Discrete Fourier transform and FFT algorithms. High speed convolution and its application to digital filtering.

ELL325 Control Engineering-II

4 credits (3-1-0)

Prerequisite(s): ELL301

Overlaps with: EEL721

Review of control system fundamentals and basic linear algebra. Introduction to linear dynamical systems and properties. State-space representation and canonical realizations. Relation between state-space and transfer function representations. Similarity transformation. Diagonalization. Jordan canonical form. Matrix exponential and its properties. Solution of state equations. Cayley-Hamilton Theorem, Stability: BIBO and internal. Linearization of nonlinear systems. Controllability and Observability. Minimal realization. State feedback and observer design. Linear Quadratic Regulator.

ELS330 Independent Study (EP)

3 credits (0-3-0)

ELS330 Independent Study (EE3)

3 credits (0-3-0)

ELL332 Electric Drives

3 credits (3-0-0)

Prerequisite(s): ELL203

Basic Concepts: Characteristics and operating modes of drive motors. Starting, braking and speed control of motors. 4 quadrant drives. Types of loads. Torque and associated controls used in process industries.

DC Motor Drives: Characteristics, Starting Methods, Braking Methods, Speed Control Using Converters and Choppers.

Three phase Induction Motor Drives: Characteristics and Equivalent Circuits, Starting Methods, Braking Methods, Speed Control of Cage Rotor Induction Machines using as AC voltage controllers, Voltage-Source and Current-Source Inverters. V-by-F Control and other Control Techniques. Speed Control of Wound-Rotor Induction Machines using Rotor Resistance Variation; Slip-Power Recovery Scheme.

Three phase Synchronous Motor Drives: Characteristics and Equivalent Circuits, Starting Methods, Braking Methods, Speed Control in True Synchronous and Self Control Modes.

Special Machines: Permanent Magnet Brush-Less Motor Drives, Permanent Magnet Synchronous Motor Drives, Stepper and Reluctance Motor Drives.

ELP332 Electric Drives Laboratory

1.5 credits (0-0-3)

Prerequisite(s): ELL332

ELL333 Multivariable Control

3 credits (3-0-0)

Pre-requisites: ELL225

Overlaps with: ELL721

Review of control system fundamentals and basic linear algebra. Introduction to linear dynamical systems and properties. State-space representation and canonical realizations. Relation between state-space and transfer function representations. Similarity transformation. Diagonalization. Jordan canonical form. Matrix exponential and its properties. Solution of state equations. Cayley-Hamilton Theorem, Stability: BIBO and internal. Linearization of nonlinear systems. Controllability and Observability. Minimal realization. State feedback and observer design. Linear Quadratic Regulator.

ELL334 DSP based Control of Drives

4 credits (3-0-2)

Prerequisite(s): ELL203, ELL332

Introduction and Application of DSP in the power electronic converter controlled drives, Types of processors used for power control and their comparison, computational advantages, Limitations. Introduction to peripherals ADC, DAC, PWM, Encoders and their interface. Interfacing issues, Sampling process, Harmonic analysis in real-time using a DSP, Assembly language programming of a DSP, Motor control applications. Pulse-Width Modulation and Pulse-Frequency Modulation schemes, lookup tables and real-time computation. Interfacing and signal conditioning circuits for DSP based schemes. Realization of computationally intensive algorithms like variable structure, adaptive and neural network schemes for Drives systems.

ELL335 CAD of Electric Machines

4 credits (3-0-2)

Prerequisite(s): ELL103

1. Basic Considerations, 2. Design of Main Dimensions, 3. Transformer Design, 4. Design of rotating machines, 5. Computer Aided Design of Transformers, 6. Computer Aided Design of DC machines, 7. Computer Aided Design of Synchronous Machines, 8. Computer Aided Design of Induction Machines, 9. Computer Aided Design of Special Machines.

ELL363 Power Engineering-II

3 credits (3-0-0)

Pre-requisites: ELL303

Advanced concepts in power flow analysis, security analysis and state estimation. Economic load dispatch and unit commitment problem. Voltage and frequency control in power systems. Advanced concepts in multi-machine dynamics and stability. Electrical transients in power systems. Wind and solar generation technologies and their integration into the grid. Issues in restructured power systems. Modern numerical protection.

ELL365 Embedded Systems

3 credits (3-0-0)

Overview of Embedded Systems; Embedded System Architecture: processor example ARM, PIC, etc.; features of digital signal processor; SOC, memory subsystem, bus structure (PC104, I2C, SPI etc.), interfacing protocols (USB, IrDA etc), testing and debugging, power management; Embedded System Software: Program Optimization, Concurrent Programming, Realtime Scheduling and I/O management; Networked Embedded Systems: special networking protocols (CAN, Bluetooth); Applications.

ELL400 Power Systems Protection

3 credits (3-0-0)

Pre-requisites: ELL303

Fundamentals of Power system protection, philosophy of protective relays, Different types of relays, Introduction to protection elements like CT, PT, CB, Isolator etc, (includes CT and PT class, CB transients, CB rating and testing, Arc extinction in CB), Over current relays: Principle, operation and setting, Directional relays : needs and operating principle, Power system components protected using over current relays, Differential relays: Principle, operation and setting, Protection of three phase transformer, bus bar and generator using differential relays, Distance relays : Principle, operation and setting, Simple impedance relay, reactance relay, Mho relay and angle impedance

relays, Quadrilateral relays, Transmission line protection using distance relays, Static relays: principle, amplitude comparator and phase comparator, Phase comparator realization using positive coincidence period, Distance relay realization using comparators, Generator protection, Overview of Numerical relaying and few algorithms, Phasor extraction, Introduction to PMU and its use, Fault location.

ELL401 Advanced Electromechanics

3 credits (3-0-0)

Prerequisite(s): ELL203

Introduction to Advancement in Electromechanics, Permanent Magnet Brushless DC Machines, Permanent Magnet Synchronous Motors, Switched Reluctance Motors, Single-Phase Machines, Axial Field Machines and other Advanced Electrical Machines, Introduction to Control of Advanced Electrical Machines, Applications in Industry, Domestic Appliances, Electric Mobility, etc., Computer Aided Simulation and Design of Advanced Electrical Machines, Case Studies.

ELL402 Computer Communication

3 credits (3-0-0)

Pre-requisites: MEL250

Overlaps with: ELL785, CSL374, ELL473

(i) Introduction, network structure: Basic networking concepts, Motivations for layered network concepts, Network examples; (ii) OSI reference model: Layering concepts, Overview of different layer functionalities; (iii) TCP/IP: Layering concepts, Layered functionalities, packet formats, fragmentation, Different layer protocols and examples: ARP, ICMP, etc., Congestion and error control; (iv) Network examples and functionalities: Ethernet, hub, bridge, switch, WANs, MANs, LANs, PANs, BANs; (v) Basic network protocol analysis: Performance metrics, Queueing models; (vi) Multiaccess protocols: Need for multiaccess protocols, Contention-free access schemes, Contention-based protocols: ALOHA, CSMA; (vii) Routing in data networks: Basic graph theoretic concepts, spanning tree, Shortest path routing, distance vector routing, link state routing, RIP, OSPF; (viii) Cross-layer protocol optimization concepts: Distributed control, cost and energy efficiencies.

ELL405 Operating Systems

3 credits (3-0-0)

Pre-requisites: ELL305

Overlaps with: ELL602, CSL373, MAL358, ELL358

Introduction to OS; Process and Thread management; Scheduling; Concurrent threads and processes: mutual exclusion, synchronization, inter-process communication; Memory management: Cache and Virtual Memory management; Resource management: deadlock and its prevention; File management; I/O management; Introduction to real time systems; Elements distributed operating systems.

ELL406 Robotics and Automation

3 credits (3-0-0)

Pre-requisites: ELL225

Introduction to robotics. Basic components of robotic systems. Coordinate Transformation, D-H parameters. Forward and inverse kinematics. Velocity kinematics and Jacobian, Singularity analysis, Robot Dynamics : Holonomic and Non-Holonomic Systems. Trajectory planning. Robot control: linear and nonlinear. Actuators and Sensors. Vision based Robotic Control. Mobile Robots : Modeling and Control.

ELL407 Power Quality

3 credits (3-0-0)

Pre-requisites: ELL303

ELL408 Low power circuit design

3 credits (3-0-0)

Pre-requisites: ELL211

MOS Transistors, MOS Inverters, Static CMOS Circuits, MOS Dynamic Circuits, Pass Transistor Logic Circuits, MOS Memories, Finite State Machines, Switching Power Dissipation, Dynamic Power Dissipation,

Leakage Power Dissipation, Supply Voltage Scaling, Minimizing Switched Capacitance Minimizing Leakage Power, Variation Tolerant Design, Battery-Driven System Design.

ELL409 Machine Intelligence and Learning

4 credits (3-0-2)

Overlaps with: ELL602, CSL373, MAL358, ELL358

To give an introduction about the power switching devices such as thyristors, GTO, MOSFETS, BJT, IGBT and MCTS. Basic concept of gate drivers (Trigger techniques, optical isolators, protection circuits, and isolation transformers), snubber design and protection schemes of power devices are to be discussed. Basic circuit configurations, design and analysis of choppers (step-up, step-down, step-up/down and multi-phase choppers), DC-DC converters (non-isolated and isolated), inverters (voltage and current source configurations) are discussed. This is followed by improved power quality converters (non-isolated and isolated) for reduction of harmonics at AC mains.

ELL410 Multicore Systems

3 credits (3-0-0)

Motivation for muticores; Multithreading; Flynn's taxonomy; Stream processing (vectVLIW, GPU). Message passing; Shared memory; Cache coherence in multiprocessor Synchronisation; Interconnection networks; Benchmarks and advanced topics; Project.

ELL410 Multicore Systems

3 credits (3-0-0)

Pre-requisites: ELL305

Overlaps with: CSL730, CSL830, CSL847, MAL311, MAL465, ELL472

ELD411 B.Tech. Project-I

3 credits (0-0-6)

ELP411 Digital Communications Laboratory

1 credit (0-0-2)

Prerequisite(s): ELP311

ELL411 Digital Communications

4 credits (3-0-2)

Pre-requisites: ELL311

Overlaps with: ELL762

Matched Filter, Error Rate due to Noise. Intersymbol Interference, Nyquist's Criterion, Duobinary Signaling. Optimum Linear Receiver, Geometric Representation of Signals. Coherent Detection of Signals in Noise, Probability of Error. Coherent Digital Modulation Schemes: MPSK, MFSK, MQAM; Error Analysis. Noncoherent FSK, Differential PSK. Comparison of Digital Modulation Schemes, Bandwidth Efficiency. Pseudo-Noise Sequences and Spread Spectrum, Trellis coded modulation, Digital signaling over fading multipath channels, OFDM communications systems.

ELL417 Renewable Energy Systems

3 credits (3-0-0)

Pre-requisites: ELL203

Modeling of wind resource, aerodynamic characteristics, wind energy generators – steady-state and dynamic modeling, electrical and pitch controller design, effect of induction generators on grid operation, solar Photovoltaic systems – steady state and dynamic modeling, MPPT operation, power electronic systems for solar PV, fuel cells.

ELD431 B.Tech. Project-I

3 credits (0-0-6)

ELL431 Power System Optimization

3 credits (3-0-0)

Prerequisite(s): ELL303

Characteristic of Generation units, Economic dispatch of thermal

plants, Unit commitment, Hydrothermal coordination, Maintenance scheduling, Emission minimization, Optimal Power flow, Security constrained optimization, Optimization of distribution networks, Optimization in Power Markets.

ELL431 Power System Optimization

3 credits (3-0-0)

Pre-requisites: ELL303

Characteristic of Generation units, Economic dispatch of thermal plants, Unit commitment, Hydrothermal coordination, Maintenance scheduling, Emission minimization, Optimal Power flow, Security constrained optimization, Optimization of distribution networks, Optimization in Power Markets.

ELL433 CAD of Power Electronics Systems

4 credits (3-0-2)

Prerequisite(s): ELP302

Introduction to Power Electronic systems, Mathematical modeling of power electronic systems, State-space modeling, Average model, Circuit averaging model, Canonical circuit model, small-signal models and circuit transfer functions. Introduction to power electronics simulators, system oriented simulators, circuit simulators, merits and limitations. Introduction to magnetic design, high frequency inductor and transformer design. Hands-on exercise problems on power electronic circuits simulation using PSPICE/SIMULINK/PSIM simulators.

ELL437 Switched Mode Power Conversion

3 credits (3-0-0)

Prerequisite(s): ELL231

To give an introduction about the power switching devices such as thyristors, GTO, MOSFETS, BJT, IGBT and MCTS. Basic concept of gate drivers (Trigger techniques, optical isolators, protection circuits, and isolation transformers), snubber design and protection schemes of power devices are to be discussed. Basic circuit configurations, design and analysis of choppers (step-up, step-down, step-up/down and multi-phase choppers), DC-DC converters (non-isolated and isolated), inverters (voltage and current source configurations) are discussed. This is followed by improved power quality converters (non-isolated and isolated) for reduction of harmonics at AC mains.

ELL436 Digital control

3 credits (3-0-0)

Pre-requisites: ELL225

ELL440 Power Systems Protection

Fundamentals of Power system protection, philosophy of protective relays, Different types of relays, Introduction to protection elements like CT, PT, CB, Isolator etc, (includes CT and PT class, CB transients, CB rating and testing, Arc extinction in CB).

Over current relays: Principle, operation and setting, Directional relays: needs and operating principle, Power system components protected using over current relays.

Differential relays: Principle, operation and setting, Protection of three phase transformer, bus bar and generator using differential relays.

Distance relays: Principle, operation and setting, Simple impedance relay, reactance relay, Mho relay and angle impedance relays, Quadrilateral relays, Transmission line protection using distance relays.

Static relays: principle, amplitude comparator and phase comparator, Phase comparator realization using positive coincidence period, Distance relay realization using comparators.

Generator protection.

Overview of Numerical relaying and few algorithms, Phasor extraction, Introduction to PMU and its use, Fault location.

ELD450 BTP Part-II

8 credits (0-0-16)

ELL450 Selected Topics in AE-I

3 credits (3-0-0)

ELD451 BTP Part-II

8 credits (0-0-16)

ELV451 Special Modules in SG&RE-I

1 credit (1-0-0)

*Pre-requisites: to be decided by the instructor***ELD452 BTP Part-II**

8 credits (0-0-16)

ELL452 Special Topics in EET-I

3 credits (3-0-0)

ELD453 BTP Part-II

8 credits (0-0-16)

ELL453 Power System Dynamics and Control

3 credits (3-0-0)

Characteristic of Generation units, Economic dispatch of thermal plants, Unit commitment, Hydrothermal coordination, Maintenance scheduling, Emission minimization, Optimal Power flow, Security constrained optimization, Optimization of distribution networks, Optimization in Power Markets.

ELD454 BTP Part II

8 credits (0-0-16)

ELL454 Special Topics in ET-I

3 credits (3-0-0)

ELD455 BTP part II

8 credits (0-0-16)

ELL458 Special Topics in CS&N-I

3 credits (3-0-0)

ELD459 BTP Part-II

8 credits (0-0-16)

*Pre-requisites: ELD411, ELD431***ELL459 Special Topics in IP-I**

3 credits (3-0-0)

*Pre-requisites: to be decided by the instructor***ELL460 Special Topics in IP-II**

3 credits (3-0-0)

*Pre-requisites: to be decided by the instructor***ELL700 Linear Systems Theory**

3 credits (3-0-0)

Pre-requisites: ELL225 or equivalent

Theory/Lecture: Review of data communication techniques, basic networking concepts, layered network and protocol concepts, quality of service, motivations for cross-layer protocol design. Motivations for performance analysis, forward error correction and re-transmission performances, Markov and semi-Markov processes, Little's theorem, M/M/m/k, M/G/1 systems, priority queueing, network of queues, network traffic behavior. Concepts and analysis of multi-access protocols; contention-free and contention multi-access protocols. Basic graph theoretic concepts, routing algorithms and analysis.

Laboratory: Simulation and hardware experiments on different aspects of computer communication networks. Network traffic generation and analysis, differentiated service queues, network of queues using discrete event simulations.

ELV700 Special Module in Systems and Control

1 credit (1-0-0)

Pre-requisites: to be decided by the instructor

To provide exposure in specialized topics in systems and control.

ELL701 Mathematical Methods in Control

3 credits (3-0-0)

Introduction to robotics. Basic components of robotic systems. Coordinate Transformation, D-H parameters. Forward and inverse kinematics. Velocity kinematics and Jacobian, Singularity analysis, Robot Dynamics. Trajectory planning. Robot control: linear and nonlinear. Actuators and Sensors. Robot Vision.

ELL702 Nonlinear Systems

3 credits (3-0-0)

Pre-requisites: ELL225 or equivalent

Introduction to nonlinear systems: Examples of phenomena, models & derivation of system equations. Fundamental properties: Existence & uniqueness, Dependence on initial conditions & parameters. Phase plane analysis. Limit cycles & oscillations. Describing function method and applications. Circle criterion. Lyapunov stability of autonomous systems. Perturbation theory & Averaging. Singular perturbation model and stability analysis. Basic results on Lie algebra. Controllability and Observability of nonlinear systems. Bifurcations. Chaos. Synchronization.

ELL703 Optimal Control Theory

3 credits (3-0-0)

Pre-requisites: ELL700, ELL333

Introduction to natural Computing; Uncertainty handling: probabilistic and fuzzy logic; Evolutionary Computing and problem solving as search; Swarm Intelligence: ant colonies, swarm robotics; Immunocomputing;

Introduction to DNA Computing; Basics of Quantum Computing.

EEL703 Computer Networks

3 credits (3-0-0)

ELL704 Advanced Robotics

3 credits (3-0-0)

Pre-requisites: ELL225

Review of Coordinate Transformations, D-H parameters and kinematics. Velocity kinematics and Jacobian, Singularity analysis, Robot Dynamics, Motion planning, Robot control: linear methods – feedforward control, state feedback, observers; Nonlinear Control methods – Computed Torque Control, Feedback linearization, Sliding Mode control; Vision based Robotic Control. Holonomic and Non-Holonomic Systems, Mobile Robots : Modeling and Control, Odometry Analysis, Navigation problems with obstacle avoidance, motion capturing systems.

ELL705 Stochastic Filtering and Identification

3 credits (3-0-0)

Pre-requisites: ELL701, ELL333

MMSE estimation including LMS, Gaussian case. Wiener filtering & prediction. Kalman filtering & prediction. Extended Kalman filtering. Predictors for difference equation based models including ARMA, Box Jenkins & others. Statistical properties of Least Squares estimation and its relationship with Bayes estimation (ML, MAP), convergence analysis, CR bound. Recursive Least Squares, Iterative methods for nonlinear Least Squares. Identification problem: Different approaches for linear dynamical systems. Offline identification methods including Least Squares, Prediction error framework, Pseudo-linear regression (PLR) & Instrument variable methods. Recursive Identification of linear dynamical system: RLS, PLR, Prediction error framework & its application to ARMA & Innovations representation. Convergence Analysis of Recursive Identification methods: Associated ODE, Martingale. Nonlinear system identification. Subspace based method of system identification. Applications including LQG and adaptive control.

ELL706 Digital Control

3 credits (3-0-0)

Pre-requisites: ELL301

EEL706 Soft Computing

3 credits (3-0-0)

ELL707 Systems Biology

3 credits (3-0-0)

Pre-requisites: ELL225

MODELS : Variables and parameters, Law of mass action, Representations : Deterministic vs stochastic, Spatial aspects, Examples of core processes: Gene expression, Protein degradation, Phosphorylation.

DYNAMICS : Equilibrium solutions, Bifurcations, Switches, Bistability, Pulses and Oscillations, Circadian Rhythms and Clocks, Spatial patterns. Morphogenesis and Development.

CONTROL MECHANISMS : Performance Goals, Integral Feedback Control, Homeostasis and Perfect Adaptation, Bacterial Chemotaxis, Feedforward Loops, Fold Change Detection, Robustness to Perturbations, Tradeoffs, Internal Model Principle.

EEL707 Multimedia systems

4 credits (3-0-2)

EEL708 Information Retrieval

3 credits (3-0-0)

ELL708 Selected Topics in Systems and Control

3 credits (3-0-0)

Pre-requisites: to be decided by the instructor

To be decided by the Instructor when floating this course: It can be

anything that is related to systems and control engineering, but is not covered in any of the established courses.

EEL709 Pattern Recognition

3 credits (3-0-0)

ELL709 Design Aspects in Control

3 credits (3-0-0)

System Modeling – model structures (Process model, ARX model), Review of concepts of stability, feedback and feedforward control. Classical control – First-Order Plus Dead-Time model (FOPDT), process reaction curves, Second-Order Plus Dead-Time model (SOPDT), relay feedback process identification; Smith Predictor and its variations, PID controllers and their tuning, Ziegler-Nichols and Cohen-Coon techniques.

Reliable State Feedback design – pole placement, eigenstructure assignment, region based eigenvalue assignment, eigenstructure-time response relationships. Controller gain selection – noise sensitivity. Controller robustness. Disturbance rejection.

Frequency Domain Loop Shaping.

Output feedback control – compensator design, review of Lead, Lag and Lag-Lead compensators, Zero dynamics – significance in servo control design, design for unstable zero dynamics. Observers – concept and design philosophy.

Applications in practical controller design scenarios.

ELL710 Digital Image Processing

4 credits (3-0-2)

Prerequisite(s): ELL205

Overlaps with: MAL715

Introduction to 2-D Signals and Systems. Image Digitization. Image Transforms. Image Data Compression: Transform Domain Coding, Predictive Coding, JPEG. Image Enhancement: Image Restoration: Inverse Filtering, Algebraic Approach to Restoration, Wiener (LMS) approach, Constrained Least Squares Restoration, Interactive and other methods for restoration. Image Reconstruction: The Filtered Back- Projection Algorithm, Algebraic Reconstruction Method. Image Segmentation: Detection of Discontinuities, Edge Linking and Boundary Detection, Thresholding, Region-Oriented Segmentation. Selected Topics of Current Interest (for example multi-resolution analysis, morphological processing etc.).

ELL710 Coding Theory

3 credits (3-0-0)

Introduction to 2-D Signals and Systems. Image Digitization. Image Transforms. Image Data Compression: Transform Domain Coding, Predictive Coding, JPEG. Image Enhancement: Image Restoration: Inverse Filtering, Algebraic Approach to Restoration, Wiener (LMS) approach, Constrained Least Squares Restoration, Interactive and other methods for restoration. Image Reconstruction: The Filtered Back- Projection Algorithm, Algebraic Reconstruction Method. Image Segmentation: Detection of Discontinuities, Edge Linking and Boundary Detection, Thresholding, Region-Oriented Segmentation. Selected Topics of Current Interest (for example multi-resolution analysis, morphological processing etc.).

ELV710 Special Module in Cyber Security

1 credit (1-0-0)

Overview of cyber security, computer security and the associated threat, attack, adversary models, access control, intrusion detection, basic network security, security of cyber physical systems and a brief introduction to cryptography.

ELL711 Optical Communications

3 credits (3-0-0)

Prerequisite(s): ELL212

The fiber channel with its linear and nonlinear characteristics, LED and Laser diode transmitter design, PIN and APD receiver design,

Modulation schemes, Source and line coding in optical systems. Optical Link design with dispersion and power budgeting. Design of digital and analog communication systems. Optical amplifiers, WDM system design. Hybrid fiber co-axial/microwave links

ELL711 Signal Theory

3 credits (3-0-0)

Pre-requisites: ELL105, ELL311

The fiber channel with its linear and nonlinear characteristics, LED and Laser diode transmitter design, PIN and APD receiver design, Modulation schemes, Source and line coding in optical systems. Optical Link design with dispersion and power budgeting. Design of digital and analog communication systems. Optical amplifiers, WDM system design. Hybrid fiber co-axial/microwave links.

ELL712 Digital Communications

3 credits (3-0-0)

Review of random variables and random process, signal space concepts, Common modulated signals and their power spectral densities, Optimum receivers for Gaussian channels, Coherent and non-coherent receivers and their performance (evaluating BER performance through software tools), Basics of Information theory, source and channel coding, capacity of channels, band-limited channels and ISI, multicarrier and spread-spectrum signaling, multiple access techniques.

ELL713 Microwave Theory and Techniques

3 credits (3-0-0)

Pre-requisites: ELL212

Overlaps with: CRL711

Review of EM theory: Maxwell's equations, plane waves in dielectric and conducting media, energy and power. Transmission lines and waveguides: closed and dielectric guides, planar transmission lines and optical fibre. Network analysis: scattering matrix other parameters, signal flow graphs and network representation. Impedance matching and tuning. Analysis of planar transmission lines. Analysis of design of passive components.

ELL714 Basic Information Theory

3 credits (3-0-0)

Pre-requisites: ELL105

Introduction to entropy, relative entropy, mutual information, fundamental inequalities like Jensen's inequality and log sum inequality. Proof of asymptotic equipartition property and its usage in data compression. Study of entropy rates of the stochastic process following Markov chains. Study of data compression: Kraft inequality and optimal source coding. Channel capacity: symmetric channels, channel coding theorem, Fano's inequality, feedback capacity. Differential entropy. The Gaussian channel: bandlimited channels, channels with colored noise, Gaussian channels with feedback. Detailed study of the rate-distortion theory: rate distortion function, strongly typical sequences, computation of channel capacity. Joint source channel coding/separation theorem. There are no laboratory or design activities involved with this course.

ELL715 Digital Image Processing

4 credits (3-0-2)

Introduction to 2-D Signals and Systems. Image Digitization. Image Transforms. Image Enhancement: Image Restoration: Inverse Filtering, Algebraic Approach to Restoration, Wiener (LMS) approach, Constrained Least Squares Restoration, Adaptive methods for restoration. Image Reconstruction: The Filtered Back- Projection Algorithm, Algebraic Reconstruction Method. Image Segmentation: Detection of Discontinuities, Edge Linking and Boundary Detection, Thresholding, Region-Oriented Segmentation. Object representation and description: Boundary descriptors, region descriptors, HOG and SIFT based features. Colour Image processing: colour models, colour transformations, and processing techniques.

ELL716 Telecommunication Switching and Transmission

3 credits (3-0-0)

ELL717 Optical Communication Systems

3 credits (3-0-0)

Pre-requisites: ELL769

The fiber channel with its linear and nonlinear characteristics, LED and Laser diode transmitter design, PIN and APD receiver design, Modulation schemes, Source and line coding in optical systems. Optical Link design with dispersion and power budgeting. Design of digital and analog communication systems. Optical amplifiers, WDM system design. Hybrid fiber co-axial/microwave links.

ELL718 Statistical Signal Processing

3 credits (3-0-0)

Pre-requisites: ELL711

Review of random variables, GS orthogonalization, geometric concepts, notions of projection, random processes, WSS processes, properties of autocorrelation and power spectral densities, properties of autocorrelation matrices, Cholesky decomposition, eigen-analysis, optimum Linear filtering, LMS and its performance, variants, Least-squares, QR decomposition and SVD, RLS and its performance, square-root RLS, Kalman Filters, spectrum modelling.

ELP718 Telecommunication Software Laboratory

3 credits (0-1-4)

Contents: CASE tools, object-oriented program development, use of telecom network simulator, implementation using C/C++/Java, network management software design, V.5 test and simulation.

ELL719 Detection and Estimation Theory

3 credits (3-0-0)

Pre-requisites: ELL711

Overview of the course, Classical Decision Theory: Binary hypothesis testing: Bayes criterion, Neyman-Pearson criterion, min-max test, M-ary hypothesis testing: General rule, minimum probability of error decision rule, Gaussian case and associated geometric concepts, Erasure decision problem, Random parameter estimation. Non-random parameter estimation: CRLB for nonrandom parameters, ML estimation rule, asymptotic properties of ML estimates. Linear minimum variance estimation, Least squares methods CRLB for random parameter estimation, condition for statistical efficiency, Multiple parameter estimation, Composite and non-parametric hypothesis testing, Applications, Detection of signals,

Mathematical preliminaries: K-L expansion and its application to Detection of known and un-known (i.e. with unknown, parameters) signals in AWGN., Detection of signals in colored noise. Linear estimation, Wiener filters and solution of Wiener Hopf Equations, Kalman-Bucy filters, Miscellaneous estimation techniques.

ELP719 Microwave Laboratory

3 credits (0-1-4)

Design, fabrication and testing of simple linear microwave circuits using microstrip technology.

ELL720 Advanced Digital Signal Processing

3 credits (3-0-0)

Pre-requisites: ELL205

Maximization of functionals of a single and several functions using calculus of variations, Constrained extremals, Euler-Lagrange Equation, Necessary conditions for optimal control, Pontryagin's minimum principle and state inequality constraints, Minimum time problems, Minimum control effort problems, Linear quadratic regulator problems, Riccati Equation, Singular intervals in optimal control problems, The principle of optimality, Application of the principle of optimality to decision making, Dynamic programming applied to routing problems, Computational steps for solving optimal control problems using dynamic programming, Discrete linear regulator problem, Hamilton-Jacobi-Bellman Equation, Numerical Techniques to determine optimal trajectories.

ELP720 Telecommunication Networks Laboratory

3 credits (0-1-4)

Contents: Development of network elements such as routers, SNMP nodes. Use of laboratory and telecom field test instruments such as: oscilloscopes, oscillators, RMS meters, transmission impairment measuring systems, return loss meters, etc. Enables students to study voice and data switching functions and to measure transmission and traffic characteristics on models of the major business communication systems and carrier transmission facilities (controlled LAN environments, Ethernet, E1, T1/T3 lines). Experimental procedures include the use of frequency and time division multiplex systems and the modulation techniques employed by in such systems and the observation of noise and distortion effects.

ELV720 Special Module in Communication Systems and Networking-I

1 credit (1-0-0)

ELL721 Power aware communication

3 credits (3-0-0)

Pre-requisites: ELL762, ELL402, ELL785

Fundamentals of signals, signal transmission and media, modulation techniques, equalization, amplification, crosstalk, attenuation, switching principles, telephony, signaling, transmission systems- DSL, optical, radio.

ELP721 Embedded Telecommunication Systems Laboratory

3 credits (0-1-4)

ELL722 Antenna Theory and Techniques

3 credits (3-0-0)

Review of electromagnetism and vector calculus, history and context of antenna theory, operation of various antenna types, such as dipole, linear, loop, and resonant type, characterization of antenna performance metrics, and introduction to numerical techniques for visualizing antenna radiation patterns.

ELL723 Broadband Communication Systems

3 credits (3-0-0)

Multiple Access Techniques – CSMA, Spread Spectrum (SS), Direct Spread SS, Frequency Hopping SS and CDMA, Timing Synchronization, Delay Lock Loop, ISDN Physical Layer, ISDN Data Link Layer, Signaling System Number 7, Broadband ISDN Protocols, ATM Switch and Protocols, CLOS Network Switch, OFDM Concept, OFDMA System, Multi-Carrier CDMA, WiMAX.

ELL724 Computational Electromagnetics

3 credits (3-0-0)

Capacity of single-user Gaussian multi-antenna deterministic channels and optimal strategies. Reliable transmission in single user state dependent channels. Capacity of Gaussian single-antenna fading channels with state (RX CSI, Full CSI). Capacity of single-antenna frequency-selective fading channels (OFDM modulation, waterfilling across frequency). Capacity of Gaussian multi-antenna single user fading channels (RX CSI only, Full CSI). Spatial multiplexing gain, array gain. Transmitter and receiver architectures, V-BLAST transmission, Zero-Forcing receiver, MMSE receiver, MMSE-SIC receiver. Optimality of MMSE-SIC.

Capacity region of the multi-user Gaussian MAC channel. Capacity region of the multi-user Gaussian Broadcast channel (BC) with single-antenna terminals. Capacity of state dependent channels with non-causal side information (Gelfand-Pinsker coding). Dirty paper coding to pre-cancel known interference. MAC-BC duality. Capacity region of the multi-user Gaussian Broadcast channel with multi-antenna terminals (Dirty paper coding achieves the capacity region). Capacity region of the Interference channel. There are no laboratory or design activities involved in this course.

ELL725 Wireless Communications

3 credits (3-0-0)

Pre-requisites: ELL712

Characterization of fading effects, Delay Spread Measurement, Fading counter- measures using Antenna diversity and Frequency diversity, Demonstration of Handover, Transmission of data over wireless communication link, Antenna half power beamwidth measurement, VSWR and impedance measurement of antennas, polarization of antennas, cross polar discrimination and polarization diversity, basic MIMO systems. The latter part of the lab course requires the students to do a project related to wireless communications.

ELP725 Wireless Communication Laboratory

3 credits (0-1-4)

ELL726 Nano-Photonic and Plasmonics

3 credits (3-0-0)

EM Waves, Maxwell's Equations, Boundary Conditions, Drude, Debye, Lorentz-Drude Dispersion Relation Models, Introduction to Surface Plasmons, Surface Plasmon Excitation Mechanisms, Plasmonic Nanogratings, Localized Surface Plasmon based Devices, Optical and Plasmonic Interconnects, Sensors based on Surface Plasmons, SERS based sensing, Photonic Crystals, Optical Metamaterials, Fabrication of Nanomaterials and Plasmonic Devices.

ELL727 Digital Communication and Information Systems

3 credits (3-0-0)

Review of Fourier Transforms, Sampling Theorem, Quantization, Pulse Code Modulation, Digital Modulation Schemes – BPSK, QPSK, BPSK, QASK, MPSK, Random Processes, Probability density function, Gaussian density function, Frequency domain representation of noise, Spectral components of noise, Noise bandwidth, Properties of noise, Noise Performance Analysis of digital modulation schemes. Information Theory, Concept of information, Coding to increase average information per bit, Shannon's theorem, Capacity of Gaussian Channel, Bandwidth-S/N tradeoff. Discrete memory-less channel capacity. Error correcting codes, Block codes, Cyclic redundancy check, Coding gain, Bit error rate calculations.

ELL728 Optoelectronic Instrumentation

3 credits (3-0-0)

Introduction to test and measuring instruments, instrumentation amplifier, chopper stabilized amplifier, analog signal processing: active filter, A/D, D/A converters, integrated, transimpedance and low impedance pre-amplifiers design, sample & hold circuits, multiplexer, peak detector, zero crossing detector etc., digital design: PALs, FPGA, signal analyzer: superheterodyne spectrum analyzer, DFT and FFT analyzer, digital filters and computer interface, microcontrollers: introduction to microcontroller and applications such as 8031, optical post, in-line and pre-amplifiers, noise figure, optoelectronic circuits: transmitter and receiver design, OTDR, optical spectrum analyzer, sensors: fiber optic and radiation types, distributed sensors, fiber optic smart structure, display devices.

ELL730 I.C. Technology

3 credits (3-0-0)

Course Introduction, Modern Semiconductor IC fabrication Industrial/Academic Landscape; Overview of modern CMOS process flow – basic steps; Crystal growth and wafer basics; Cleanroom basics – environment, infrastructure, advanced MOS cleaning, gettering etc.

Lithography; Oxidation; Diffusion; Ion-Implantation; Thin-Film Deposition; Etching; Backend processes; Process Simulation- tools, techniques and methods; Advanced device fabrication concepts – I (SOI, FDSOI, etc); Advanced device fabrication concepts – II (organic, PV, hetero); Advanced device fabrication concepts – III (CNTs, Self-assembly etc).

ELV730 Special Modules in V&ES – I

1 credit (1-0-0)

Pre-requisites: to be decide by instructor

ELL731 Mixed Signal Circuit Design

3 credits (3-0-0)**Pre-requisites: ELL782**

Switched capacitor circuit principles and applications in filter design; issues of clock feedthrough, charge injection and other non-idealities; design of switches; data converters: characteristics, static and dynamic; types of ADCs; track and hold, and sample and hold circuits; comparators; flash ADCs; pipelined ADCs; successive approximation register type ADCs; discrete-time and continuous time delta-sigma ADCs; higher order delta-sigma design; MASH structure; multi-bit delta-sigmas; decimation filtering – sinc and comb filters; digital to analog conversion; voltage-based DACs; charge-based DACs; current-based DACs – binary and thermometer currents; linearizing techniques for DACs; delta-sigma DACs; interpolation filtering; phase-locked loop basics; PLL dynamics; frequency synthesis; all-digital PLLs.

ELV731 Special Modules in NE&PS – I**1 credit (1-0-0)**

Pre-requisites: to be decided by the instructor

ELL732 Micro and Nanoelectronics**3 credits (3-0-0)**

Technology basics and digital logic families such as static CMOS, pass transistor, transmission gate, dynamic and domino logic. Advanced sequential logic elements with latch-based design and timing and clocking concepts. Power and delay of digital circuits. Physical and logical synthesis for ASICs and FPGAs. Verilog and VHDL with design examples. Design for testability with fault models.

ELL733 Digital ASIC Design**4 credits (3-0-2)**

Pre-requisites: ELL308

Overlaps with: CSL316

Review of working of MOSFET, large signal and small signal models, biasing schemes, analysis and design of various single stage amplifier configuration, Noise and distortion analysis, Mismatch and non-linearity, low and high frequency analysis of single stage amplifiers, frequency compensation, current mirrors and reference circuits, multistage amplifiers; differential and operational amplifiers, negative and positive feedback, oscillators and power amplifiers.

ELL734 MOS VLSI design**3 credits (3-0-0)**

Overlaps with: ELL329, ELL324

Digital integrated circuit design perspective. Basic static and dynamic MOS logic families. Sequential Circuits. Power dissipation and delay in circuits. Arithmetic Building blocks, ALU. Timing Issues in synchronous design. Interconnect Parasitics.

ELV734 Special Module in Scientific Writing for Research**1 credit (1-0-0)**

Tools needed for scientific writing, ethics of publication, plagiarism, attribution, copyrights, writing impactful papers, writing theses, writing a technical disclosure or patent.

ELL735 Analog Integrated Circuits**3 credits (3-0-0)**

Pre-requisites: ELL204

Introduction to MOSFETs, Single stage amplifiers, Biasing circuits, Voltage and Current reference circuits, Feedback analysis, Multistage amplifiers, Mismatch and noise analysis, Differential amplifiers, High speed and low noise amplifiers, Output stage amplifiers, Oscillators.

ELL736 Solid State Imaging Sensors**3 credits (3-0-0)**

Pre-requisites: ELL204, ELL782

Radiometry and Photometry (Light radiation, photometry, light source, light units), Introduction to properties of silicon and photon absorption, Imager formats, Basics of image sensors (fundamental definition of

image sensors, pixels, photo-conversion principles, Charge coupled devices (operational principles, types and performance metrics), CMOS image sensors (operational principles, types and performance metrics), Noise, quantum efficiency, dynamic range and modulation transfer function analysis in image sensors, High speed image sensors, Back side illumination, Electron multiplication CCDs and CMOS, Colour detection in silicon, 3D imaging, machine vision cameras, polarization detection and scientific applications.

ELP736 Physical Design Laboratory**3 credits (0-0-6)****ELL737 Flexible Electronics****3 credits (3-0-0)**

Pre-requisites: ELL218, ELL111, or ELL732 or equivalent

Introduction to displays and lighting technologies, solar cells, and sensors. Flexible substrates. Low cost materials. Solution-processed fabrication methods. Printing methods. Flexible displays. Flat panel lighting. Flexible solar cells. Low-cost sensors.

ELL738 Micro and Nano Photonics**3 credits (3-0-0)**

Pre-requisites: PHL100, ELL207

Overlaps with: PHL795

Ray Optics; Wave Optics: Plane Waves, Spherical Waves, Interference, Diffraction; Paraxial Waves; Beam Optics; Fabry Perot Cavity; Microresonators - Ring Resonators, Disc Resonators; Review of Electromagnetic (EM) Theory; Boundary Conditions; and some relevant EM problems; FDTD and FEM modeling; Fundamentals of Plasmonics - Surface Plasmon Resonance, Dispersion relation, Plasmon coupling conditions, Plasmonic gratings, Models describing the refractive index of metals; Localized Surface Plasmon Resonance; Plasmonic Sensors and Devices; Surface-enhanced Raman Scattering; Plasmonic Waveguides and Interconnects; Photonic Crystals and Devices.

ELL739 Advanced Semiconductor Devices**3 credits (3-0-0)**

Pre-requisites: ELL218, ELL111(UG), ELL732(PG)

Solid state device physics, generation and recombination processes, radiation basics, density of states, gain and absorption, LEDs, OLEDs, heterojunction LEDs, lasers, population inversion, photodetectors, CCDs, image sensors, photocurrent, solar cells, efficiency measures, multijunction PVs, organic solar cells, economics, memory devices, sensors, MEMS devices.

ELL740 Power Quality**4 credits (3-0-2)**

Prerequisite(s): ELL

Overview and definition of power quality (PQ), Sources of pollution, International power quality standards, and regulations. Power quality monitoring

Power quality problems. Loads which causes power quality problems.

Power factor correction, zero voltage regulation, reactive power compensation, load balancing using load compensation techniques: passive shunt and series compensation, DSTATCOM (Distribution Static Compensators), DVR (Dynamic Voltage Restorers), UPQC (Universal Power Quality Conditioners).

Harmonic effects-within the power system, interference with communication Harmonic measurements. Harmonic elimination-using active (shunt, series and hybrid) and passive (shunt and series) filters.

Improved power quality converters: single ac-dc converters, bridgeless isolated converter, bridgeless non-isolated converters, multi-pulse converters, multilevel converters, line commutated converters, power quality improvement in SMPS, UPS, drives, welding systems, lighting systems, and renewable energy systems.

ELL740 Compact Modeling of Semiconductor Devices**3 credits (3-0-0)**

Pre-requisites: Any course on MOS devices or Microelectronics or Physical Electronics or VLSI technology

Introduction to Domestic Appliances, Embedded System Design issues, Ergonomic Design aspects, Review of Electrical Machines and Drives, Review of Embedded Systems, Drive and Control of Washing Machines, Refrigerators, Air Conditioners, Mixer-Grinders/Food Processors, Ceiling and other types of Fans, Introduction to Industrial Appliances, Drives and Control of Industrial Appliances, Computer Aided Simulation and Design of Drives and Control of Appliances, Smart Appliances.

ELL741 Neuromorphic Engineering

3 credits (3-0-0)

Motivation and field Introduction, Emerging computing trends and roadmap, non-von Neumann computing approach; Basic Biology – 1: Neuron, Synapse, Synaptic Plasticity; Basic Biology – 2 : Learning rules, Retina, Cochlea, STDP; Mathematical/Electrical modeling of Neurons - LIF, IF, HH; Hardware Implementation of Neuron circuits – VLSI Digital/Analog; Advanced Nanodevices for Neuron Implementation; Hardware Implementation of Synaptic and Learning circuits – VLSI Digital/Analog; Advanced Nanodevices for Synaptic emulation – 1 (NVM, Flash etc); Advanced Nanodevices for Synaptic emulation – 2 (RRAM, memristors, CNT etc); Synaptic programming methodology optimization; Nanodevice specific bio-inspired learning rule optimization; Full Network design example -1: Visual Application; Full Network design example -2: Auditory Application; Full system level power/energy dissipation considerations and course conclusion.

ELL742 Introduction to MEMS Design

3 credits (3-0-0)

Overlaps with: CRL726

his course is an introduction to the multi-disciplinary and rapidly growing area of MEMS. A MEMS design engineer requires knowledge of several domains –namely mechanical, electrical, fluidic and thermal, as well as knowledge of circuits and microfabrication techniques. This course will cover the fundamentals as applicable to MEMS, as well as several case studies to understand the design process.

ELL743 Photovoltaics

3 credits (3-0-0)

Pre-requisites: ELL218, ELL111(UG), ELL732(PG)

Overlaps with: ELL739

Solid state device physics, p-n and p-i-n junctions. Homojunctions and heterojunctions. Generation and recombination processes. Radiation basics. Photon absorption. Photovoltaic efficiency. Thin film fabrication processes. Silicon-based solar cells. III-V and chalcogenide-based solar cells. Multijunction architectures. Dye-sensitized solar cells. Organic solar cells. Plasmonic structures. Solar cell economics and policy.

ELL744 Electronic and Photonic Nanomaterials

3 credits (3-0-0)

Pre-requisites: PHL100

Overlaps with: EPL444, PHL726

1D, 2D and 3D confinement; Density of states; Excitons; Coulomb blockade; Optical properties of semiconducting nanoparticles: Fluorescence of semiconductor nanocrystals, core-shell nanocrystals, effect of nanocrystal size; Optical properties of metallic nanoparticles: Surface Plasmons, Localized Surface Plasmons, Surface-enhanced Raman scattering; Electronic Applications of Nanomaterials: Nanowire transistors, Memory Devices, Single electron devices, Biosensors; Optical Applications of Nanomaterials - Quantum well, wire, and dot Diodes, Lasers and Detectors, Chemical sensors, Gas sensors, Biosensors; Development of Electronic and Optical Nanomaterials: Epitaxial Growth, Deposition of Nanomaterials, Self-Assembly of Nanomaterials, Nanofabrication techniques; Characterization of Nanomaterials: Electron microscopic techniques (scanning and transmission), Atomic Force Microscopy, X-Ray Diffraction, Characterization of optical and electronic properties of nanomaterials.

ELL745 Quantum Electronics

3 credits (3-0-0)

Pre-requisites: ELL218, ELL111(UG), ELL732(PG)

Overlaps with: ELL739

Newtonian mechanics, wavepackets, brief history of quantum mechanics, blackbody radiation, photoelectric effect, wave-particle duality, second quantization, Semiconductor materials, crystal structure and defects, Bravais lattices, Brillouin zones, Miller indices, periodic potentials, Kronig-Penney model, bandstructure in bulk semiconductors, Bloch theorem, direct and indirect bandgap semiconductors, effective mass, effect of alloying, carrier statistics, superlattices and quantum wells, density of states in 0,1,2 and 3 dimensions, bandstructure in lower dimensional systems, heterojunctions, effect of strain on bandstructure, excitonic effects in semiconductors, tunneling, perturbation theory, scattering and collisions, phonons, high-field transport, Boltzmann transport theory, spin transport, excitons, optical processes in semiconductors and quantum wells, absorption, gain, spontaneous and stimulated emission, fluorescence and phosphorescence, photophysics of organic molecules and polymers.

ELL746 Biomedical Electronics

3 credits (3-0-0)

Introduction to Biomedical Instrumentation: Constraints, Regulations and health economics, Basic sensors, amplifiers and signal processing, Origin of bio potentials and electrode systems, Bio potential amplifiers, sources of noise and their Remedies, Blood pressure and heart sound systems, Measurement of flow and volume of blood Measurement of respiratory system, Ultrasonography, CAT, PET and MRI overview, Fuzzy Logic and its application medical instruments, Embedded system in medical electronics with selection of one microprocessor and then design tips, Overview of pace maker, defibrillator, hemodialysis and infant incubators. Safety codes and standards, Electro-chemical sensor, Ion Selective FET, Immunologically sensitive FET, Spectrophotometry, Optical biosensors, Fibre-optic sensors, blood glucose sensor, smell sensor, SAW devices, Sensor neural network, Expert systems and case studies of design examples.

ELL747 Active and Passive Filter Design

3 credits (3-0-0)

Pre-requisites: ELL112 or circuit theory

Review of network theorems such as reciprocity, Tellegen's theorem, scattering parameters, properties of lossless passive networks; Butterworth approximation; Chebyshev approximation; synthesis of Butterworth and Chebyshev filters; odd versus even order filters; sensitivity of lossless LC ladder filters; frequency transformations; inverse Chebyshev and elliptic approximations; synthesis of inverse Chebyshev and elliptic filters; review of properties of p.r. functions; Darlington synthesis; signal flow graphs of ladder filters; opamp-RC implementation; Gm-C implementation; switched-capacitor implementation; minimum required performance of active components; tuning of filters; transmission line based filters: using high-Z low-Z technique, using Kuroda's identities; bi-quad based design approaches and drawbacks; Tow-Thomas biquad, Sallen-Key biquad.

ELL748 System-on-Chip Design and Test

3 credits (3-0-0)

Pre-requisites: ELL201

Overview and definition of power quality (PQ), Sources of pollution, International power quality standards, and regulations. Power quality monitoring

Power quality problems. Loads which causes power quality problems.

Power factor correction, zero voltage regulation, reactive power compensation, load balancing using load compensation techniques: passive shunt and series compensation, DSTATCOM (Distribution Static Compensators), DVR (Dynamic Voltage Restorers), UPQC (Universal Power Quality Conditioners).

Harmonic effects-within the power system, interference with communication Harmonic measurements. Harmonic elimination-using active (shunt, series and hybrid) and passive (shunt and series) filters.

Improved power quality converters: single ac-dc converters, bridgeless

isolated converter, bridgeless non-isolated converters, multi-pulse converters, multilevel converters, line commutated converters, power quality improvement in SMPS, UPS, drives, welding systems, lighting systems, and renewable energy systems.

ELL749 Semiconductor Memory Design

3 credits (3-0-0)

Pre-requisites: ELL734

Introduction to Special Electrical Machines and Magnetic Devices, Permanent Magnet Machines, Permanent Magnet Brushless DC Machines, Stepper Motors, Hysteresis Motors, Switched Reluctance Motors, Hybrid Motors, Linear Machines, Magnetic Devices, Applications in Robotics, Industry Automation, Electric Vehicles, Aerospace and Defense Systems, etc, Super conducting Machines and Other Advanced machines, Case Studies, Computer Aided Simulation and Design of Special Electrical Machines.

ELL756 Special Electrical Machines

3 credits (3-0-0)

Prerequisite(s): ELL103

Introduction to Special Electrical Machines and Magnetic Devices, Permanent Magnet Machines, Permanent Magnet Brushless DC Machines, Stepper Motors, Hysteresis Motors, Switched Reluctance Motors, Hybrid Motors, Linear Machines, Magnetic Devices, Applications in Robotics, Industry Automation, Electric Vehicles, Aerospace and Defense Systems, etc, Super conducting Machines and Other Advanced machines, Case Studies, Computer Aided Simulation and Design of Special Electrical Machines.

ELL750 Modelling of Electrical Machines

3 credits (3-0-0)

Pre-requisites: ELL203

Review of dynamic Modeling of systems, Basic concepts of electromechanical energy conversion, Modeling of Transformer, Generalized Theory of Electrical machines, Modeling of DC Machine, Induction Machine, Wound Field Synchronous machine, and special machines such as BLDC, PMSM etc.

ELV750 Special Modules in AE-I

1 credit (1-0-0)

ELL751 Appliance Systems

3 credits (3-0-0)

Prerequisite(s): ELL203, ELL332 ELL365

Introduction to Domestic Appliances, Embedded System Design issues, Ergonomic Design aspects, Review of Electrical Machines and Drives, Review of Embedded Systems, Drive and Control of Washing Machines, Refrigerators, Air Conditioners, Mixer-Grinders/Food Processors, Ceiling and other types of Fans, Introduction to Industrial Appliances, Drives and Control of Industrial Appliances, Computer Aided Simulation and Design of Drives and Control of Appliances, Smart Appliances.

ELL751 Power Electronic Converters

3 credits (3-0-0)

Introduction to various power switching devices and their control, introducing various power electronic circuits for realization of AC-DC, AC-AC, DC-AC, DC-DC conversion, principle of operation, and analysis, pulse-width modulation and pulse frequency control of power electronic converters, design problems on power electronic converter systems.

ELL752 Electric Drive System

3 credits (3-0-0)

Components of electric drive system- electrical machines, power converters and control system. Different types of loads encountered in modern drive applications. dynamics of drive systems, starting, braking, speed-control, steady-state and dynamic operation of motors, load variations, closed loop control of drives, phase controlled and chopper controlled dc drives, induction motor drives, synchronous

motor drives, space phasor model, v/f control, direct and indirect vector control, direct torque control, PMSM drives, BLDC drive, drive controller design.

ELV752 Special Modules in EET-I

1 credit (1-0-0)

ELL753 Physical Phenomena in Electrical Machines

3 credits (3-0-0)

Engineering and physical aspects of rotating machines. Modern machine windings. Winding analysis and mmf waveforms. Space and time harmonics. Saturation. Unbalanced magnetic pull and magnetic noise in industrial machines. Heating/Cooling. Unbalanced and asymmetrical operation of induction motors. Special phenomena in electrical machines such as capacitor self excitation of induction machines and its applications. Use of electromagnetic field theory, performance of permanent magnet machines. Magnetic levitation Superconductors and applications. Permanent magnet and Switched Reluctance Motors.

ELV753 Special Modules in ET-I

1 credit (1-0-0)

ELL754 Permanent Magnet Machines

3 credits (3-0-0)

Introduction to Permanent Magnet Machines, Permanent Magnet DC Commutator Machines, Permanent Magnet Synchronous Machines, Permanent Magnet Brushless DC machines, Hysteresis motors, Stepper Motors. Moreover various applications of permanent magnet machines are also integral part of syllabus. Various upcoming applications in field of robotics, solar pumping, wind energy generation system and many more are covered in the syllabus. Computer aided simulation studies for modeling and performance analysis are also part of this course.

ELL755 Variable Reluctance Machines

3 credits (3-0-0)

ELL757 Energy Efficient Motors

3 credits (3-0-0)

Introduction to energy efficiency and its impacts on social life. Energy-efficient motors, fundamentals of electric motor drives, power factor under non sinusoidal conditions, energy efficient induction motor under different input parameters and applications, adjustable-speed drives their advantages and benefits from efficiency point of view, case studies related to induction motor variable speed drive system, brushless dc motor drive, switched reluctance motor drives, permanent magnet synchronous motor drive etc.

EEL758 Intelligent and Knowledge Based Systems

3 credits (3-0-0)

ELL758 Power Quality

3 credits (3-0-0)

Overview and definition of power quality (PQ), Sources of pollution, International power quality standards, and regulations. Power quality monitoring. Power quality problems. Loads which causes power quality problems. Power factor correction, zero voltage regulation, reactive power compensation, load balancing using load compensation techniques: passive shunt and series compensation, DSTATCOM (Distribution Static Compensators), DVR (Dynamic Voltage Restorers), UPQC (Universal Power Quality Conditioners). Harmonic effects-within the power system, interference with communication Harmonic measurements. Harmonic elimination-using active (shunt, series and hybrid) and passive (shunt and series) filters. Improved power quality converters: single ac-dc converters, bridgeless isolated converter, bridgeless non-isolated converters, multi-pulse converters, multilevel converters, line commutated converters, power quality improvement in SMPS, UPS, drives, welding systems, lighting systems, and renewable energy systems.

ELL759 Power Electronic Converters for Renewable Energy Systems**3 credits (3-0-0)**

Current status and future developments in renewable energy. Requirements for solar and wind power generation from the grid. Solar Power – PV system configurations, Solar cell technologies, Maximum power point tracking, Photovoltaic Inverters different types of topologies and control strategies. Wind power – Wind power energy system, types of wind turbines- fixed speed and variable speed, different types of converters – AC-DC-AC converters, matrix converters, multilevel converter, control of converters. Fuel cells and battery energy storage systems. Grid synchronization and PLL, Grid regulations. Islanding operation. Control of converters for fault operation. Filter design. Relevant IEEE and IEC standards for renewable energy systems.

ELL760 Switched Mode Power Conversion**3 credits (3-0-0)**

To give an introduction about the power switching devices such as Thyristors, GTO, MOSFETS, BJT, IGBT and MCTS. Basic concept of gate drivers (Trigger techniques, optical isolators, protection circuits, and isolation transformers), snubber design and protection schemes of power devices are to be discussed. Basic circuit configurations, design and analysis of choppers (step-up, step-down, step-up/down and multi-phase choppers), DC-DC converters (non-isolated and isolated), inverters (voltage and current source and multi-level configurations) are discussed. This is followed by improved power quality converters (non-isolated and isolated) for reduction of harmonics at AC mains.

ELL761 Power Electronics for Utility Interface**3 credits (3-0-0)**

Overview of power electronic converters for utility applications, Converter requirements for Grid-interface, Harmonic compensation, Instantaneous power theory, STATCOM and active filtering and Control of converters under grid-faults.

ELL762 Intelligent Motor Controllers**3 credits (3-0-0)***Pre-requisites: ELL305*

Fundamental concepts in control of electric drive systems. Intelligent Control algorithms used for electric drive systems. Application of Fuzzy Logic, Neural Networks, Genetic Algorithm, Hybrid Fuzzy and Nonlinear Control of Power Converters and Drives. Other recent topics on Intelligent Control of Drives.

ELL763 Advanced Electric Drives**3 credits (3-0-0)***Pre-requisites: ELL305*

Types of Controllers: Proportional-Integral Control, Hysteresis Control etc, Advanced DC Drives: Cascaded Control Loop Structure, Control Loop Design etc, Control of BLDC drive: Modeling and Control of BLDC Drive, Review of Power Converter and Modulation Techniques: Modeling of Power Converters, Sinusoidal Pulse-Width Modulation, Space Vector Pulse-Width Modulation, Field Oriented Control (FOC) of AC Machines: Generalized Space-Phasor Model of AC Machines in different Flux Frames of References, Control Principle, FOC of Permanent Magnet Synchronous Machine (PMSM), FOC of Squirrel Cage Induction Machine (SQIM), Direct Torque Control (DTC) of AC Machines: Control Principle, DTC of Squirrel Cage Induction Machine (SQIM).

ELL764 Electric Vehicles**3 credits (3-0-0)****ELL765 Smart Grid Technology****3 credits (3-0-0)****ELL766 Appliance Systems****3 credits (3-0-0)***Pre-requisites: ELL203, ELL332 ELL365***ELL767 Mechatronics****3 credits (3-0-0)****ELL768 Computer Aided Design of Power Electronic Systems****3 credits (3-0-0)**

Introduction to modern simulation tools used for the power electronic systems analysis such as PSPICE, MATLAB, PSIM, SABER etc, Modeling of power electronic systems, filters designs. Introducing to advanced modeling techniques and their transformation into software platform, Closed-loop power electronic systems modeling and their simulation.

ELL770 Power System Analysis**3 credits (3-0-0)***Pre-requisites: ELL303*

Revision of Basic Concepts in pu and modeling, Admittance model of transmission network, Power Flow solutions (GS, NR, DLF, FDLF, DCLF), Symmetrical components and sequence networks, Faults - Symmetrical and unsymmetrical, Z Bus building algorithms, State Estimation, Voltage Stability, Continuation Power Flow, Power System Security (Overload, Voltage), Introduction to WAMS and PMUs, Linear State Estimation.

ELL771 Advanced Power System Protection**3 credits (3-0-0)**

Fundamentals of protection, generator protection, transformer protection, bus bar protection, over current and differential protection. Out of step protection, blinder design. Static relays, Numerical relay. Wide area protection.

ELL772 Planning and Operation of a Smart Grid**3 credits (3-0-0)***Pre-requisites: ELL303*

Smart grids key characteristics, demand side management, load characteristics, hybrid electric vehicles, energy markets, deregulation, wide area monitoring, protection and control, smart metering, adaptive relaying, power line carrier communication and networking, architectures and standards, renewable energy, distributed generation, smart grids policies.

ELL773 High Voltage DC Transmission**3 credits (3-0-0)**

General aspects and comparison with AC transmission system. Thyristor based HVDC Converter and inverter operation. Control of HVDC link. Interaction between AC and DC system. Harmonic generation and their elimination. Protections for HVDC system. Modeling of HVDC link for AC-DC power flow. AC-DC system power flow solution techniques. HVDC light.

ELL774 Flexible AC Transmission system**3 credits (3-0-0)**

The phenomenon of voltage collapse; the basic theory of line compensation. Static VAR compensators; static phase shifters; thyristors controlled series capacitors. Co-ordination of FACTS devices with HVDC links. The FACTS optimization problem. Transient and dynamic stability enhancement using FACTS components.

ELL775 Power System Dynamics**3 credits (3-0-0)***Pre-requisites: ELL303*

Dynamic models of synchronous machines, excitation system, turbines, governors, loads. Modelling of single-machine-infinite bus system. Mathematical modelling of multimachine system. Dynamic and transient stability analysis of single machine and multimachine systems. Power system stabilizer design for multimachine systems. Dynamic equivalencing. Voltage stability Techniques for the improvement of stability. Direct method of transient stability analysis: Transient energy function approach.

ELL776 Advanced Power System Optimization**3 credits (3-0-0)**

Introduction to power system optimization problems and linkages. Optimization basics and solution techniques for convex and non convex optimization problems. Basic Optimal power flow. Preventive and corrective security constrained optimal power flow, Unit commitment, hydrothermal scheduling, generation, transmission and reactive expansion planning. Optimization with uncertain data

Introduction to power system optimization problem and their linkages. Security states and optimization requirements. Convex and nonconvex optimization techniques. Static and dynamic optimization techniques. Day ahead and real time market planning. Optimization to handle uncertainty in data. Fuzzy and probabilistic techniques. Generation, transmission and reactive resources planning. Renewable generation integration optimization. Effect of markets and renewable generation in resources planning.

ELL777 Power System operation and control

3 credits (3-0-0)

Control of active power. Turbine, governor and boiler modelling and control. Hydro and steam turbines, load frequency control, Automatic generation control in single-area and multi-area systems. Under-frequency load shedding, secondary frequency control. Automatic voltage regulators, excitation systems – modelling and control, small-signal stability studies, power system stabilizers, on-load tap-changing transformers.

ELL778 Dynamic Modelling And Control of Sustainable Energy Systems

3 credits (3-0-0)

Microgrids and distributed generation; Introduction to renewable energy technologies; electrical systems and generators used in wind energy conversion systems, diesel generators, combined heat cycle plants, inverter based generation, solar PV based systems, fuel cell and aqua-electrolyzer, battery and flywheel based storage system; Voltage and frequency control in a microgrid; Grid connection interface issues.

ELL779 Forecasting Techniques for Power System

3 credits (3-0-0)

Principles of forecasting load, wind and price. Statistical and non statistical based approaches. AI application for forecasting.

ELD780 Minor Project

2 credits (0-0-4)

ELL780 Mathematical Foundations of Computer Technology

3 credits (3-0-0)

Probability theory, stochastic processes, and statistical inference. Elements of real and complex analysis, and linear algebra. Optimization, with an emphasis on application and implementation.

ELP780 Software Lab

3 credits (0-1-4)

Experiments related to the following topics: advanced data structures and algorithms, compilers, GUI, component-based software design, distributed and web based applications, UML, firmware, database applications.

ELV780 Special Module in Computers

1 credit (1-0-0)

ELL781 Software Fundamentals for Computer Technology

3 credits (3-0-0)

Introduction, data structures for combinatorial optimization: heaps, union-find, Fibonacci heaps, dynamic trees, dynamic graph structure; Asymptotic analysis; Divide & conquer and graph algorithms: Graph search: Breadth first, depth first, topological sorting, Fast Fourier Transform, Matrix Multiplication, Shortest path algorithms; Additional Data Structures: Suffix trees & string matching, Splay trees & amortized analysis; Advanced algorithmic design techniques: Dynamic

programming (edit distance, chains of matrix multiplication, etc.), Network flow and its use for solving problems; Linear and integer programming, NP-completeness, Randomized algorithms (hashing & global minimum cut), Approximation Algorithms; Object oriented Software design, Design of Dependable Software.

ELP781 Digital Systems Lab

3 credits (0-1-4)

ELV781 Special Modules in Information Processing-I

1 credit (1-0-0)

Pre-requisites: to be decided by the instructor

ELL782 Computer Architecture

3 credits (3-0-0)

Instruction set design, pipelining, memory hierarchy design, parallelism in various forms, warehouse scale computers, specific topics such as Vector, SIMD, GPU architectures, Embedded Systems, VLIW, EPIC, Multi-core architectures.

ELP782 Computer Networks Lab

3 credits (0-1-4)

Simulation and hardware experiments on different aspects of computer communication networks. Network traffic generation and analysis, differentiated service queues, network of queues using discrete event simulations.

ELL783 Operating Systems

4 credits (3-0-2)

Processes and threads; CPU scheduling; concurrency, synchronisation; deadlocks; Memory management; files and I/O; Real-time operating systems; basics of Cloud computing.

ELL784 Introduction to Machine Learning

3 credits (3-0-0)

Pre-requisites: MTL106

Overlaps with: ELL409, CSL341, COL774, MAL803, ELL709

Introduction to Machine intelligence and learning; linear learning models; Artificial Neural Networks: Single Layer Networks, LTUs, Capacity of a Single Layer LTU, Nonlinear Dichotomies, Multilayer Networks, Growth networks, Backpropagation and some variants; Support Vector Machines: Origin, Formulation of the L1 norm SVM, Solution methods (SMO, etc.), L2 norm SVM, Regression, Variants of the SVM; Complexity: Origin, Notion of the VC dimension, Derivation for an LTU, PAC learning, bounds, VC dimension for SVMs, Learning low complexity machines - Structural Risk Minimisation; Unsupervised learning: PCA, KPCA; Clustering: Origin, Exposition with some selected methods; Feature Selection: Origin, Filter and Wrapper methods, State of the art - FCBF, ReliefF, etc; Semi-supervised learning: introduction; Assignments/Short project on these topics.

ELL785 Computer Communication Networks

3 credits (3-0-0)

Pre-requisites: MTL106/ELL711

Overlaps with: CSL374, CSL672 (20%)

Theory/Lecture: Review of data communication techniques, basic networking concepts, layered network and protocol concepts, quality of service, motivations for cross-layer protocol design. Motivations for performance analysis, forward error correction and re-transmission performances, Markov and semi-Markov processes, Little's theorem, M/M/m/k, M/G/1 systems, priority queueing, network of queues, network traffic behavior. Concepts and analysis of multi-access protocols; contention-free and contention multi-access protocols. Basic graph theoretic concepts, routing algorithms and analysis.

Suggested lab Course content:

Laboratory: Simulation and hardware experiments on different aspects of computer communication networks. Network traffic generation and analysis, differentiated service queues, network of queues using discrete event simulations.

ELL786 Multimedia Systems

3 credits (3-0-0)

Multimedia signal processing; coding and compression; standards: logic, issues, future directions; Multimedia issues governing developments in computer architecture and embedded systems, computer and communication networks, operating systems; Search and retrieval.

ELL787 Embedded Systems and Applications

3 credits (3-0-0)

Introduction to embedded system. Architectural Issues: CISC, RISC, DSP Architectures.

Component Interfacing, Software for Embedded Systems : Program Design and Optimisation techniques, O.S for Embedded Systems, Real-time Issues. Designing Embedded Systems : Design Issues, Hardware- Software Co-design, Use of UML. Embedded Control Applications, Networked Embedded Systems : Distributed Embedded Architectures, Protocol Design issues, wireless network. Embedded Multimedia and Telecommunication Applications: Digital Camera, Digital TV, Set-top Box, Voice and Video telephony.

ELL788 Computational Perception and Cognition

3 credits (3-0-0)

Introduction: Philosophical & Psychological models, Cognitive models & Bayesian Inferencing framework; Visual Perception of 3D space & scene; Perceptual processes for Object recognition & memorization; Auditory Perception; Haptic Perception; Attentional mechanism in multimedia perception; Applications: Image & video quality assessment, compression; Audio quality assessment, compression & indexing; Haptic interfaces; Cognitive Architecture; Computational Consciousness, Cognitive Robotics & Other applications.

ELL789 Intelligent Systems

3 credits (3-0-0)

Overlaps with: ELL409,CSL333,CSL671,ELL758

Introduction, Search, Markov Decision Process, Game Playing, Constraint Satisfaction, Bayesian Network, Logic, Planning, Searching with non-deterministic action.

ELL790 Digital Hardware Design

3 credits (3-0-0)

To provide advanced level exposure to digital hardware design and interfacing, elements of hardware software co-design, synthesis of digital systems at logic/RTL and system levels, simulation aspects of synthesis.

ELL791 Neural Systems and Learning Machines

4 credits (3-0-2)

Introduction to testing, simulation, fault simulation, automatic test pattern generator, sequential logic tests, automatic test equipment, designing for testability, Built-In Self-Test (BIST), behavioral test and verification.

ELL792 Computer Graphics

3 credits (3-0-0)

Image formation: the mathematics, as well as photometry and colour; transformations; basic graphics primitives; texture mapping; image-based rendering.

JTD792 Minor Project

3 credits (0-0-6)

ELL793 Computer Vision

3 credits (3-0-0)

Pre-requisites: ELL715,ELL784

Overlaps with: COL780

Link between Computer Vision, Computer Graphics, Image Processing and related fields; feature extraction; camera models; multi-view geometry; applications of Computer Vision in day-to-day life.

ELL794 Human-Computer Interface

3 credits (3-0-0)

This course will present some of the necessary background in neuroscience and computational methods necessary to begin work in this emerging field that is rapidly acquiring growing significance.

ELL795 Swarm Intelligence

3 credits (3-0-0)

Swarm intelligence, distributed optimization, ant colony algorithms, PSO, firefly, bee, and related methods, applications and implementation issues.

ELL796 Signals and Systems in Biology

3 credits (3-0-0)

Introduction to Cell Biology (DNA and Proteins); Introduction to Evolution; Modelling Evolution (Genetic Algorithms, Quasispecies); Genomic Signal Processing; Transcriptomic/Proteomic signals; Regulatory networks and dynamics; Protein interaction networks; Signal transduction and metabolic networks; Evolvability and Learning. Project activities on these topics (involving the use of online biological databases and bioinformatics software tools); Student presentations and Journal Club.

ELL797 Energy-Efficient Computing

3 credits (3-0-0)

Introduction and Motivation, Energy-Efficient Techniques in Operating Systems (Power Aware Scheduling, Adaptation for Multimedia Applications, Power aware memory and I/O device management, multiprocessor systems.), Storage, Compilers, Networks and Data Centers, Power management for Wearable devices and pervasive computing.

ELL798 Agent Technologies

3 credits (3-0-0)

The course will comprise lectures on the various topics on agent technology and self-study on its applications in various domains. The topics are elaborated below. The material of the lectures will be gathered from text-books and recent research papers. The self-study will comprise study and analysis of typically 5-8 substantial research papers and will result in a term paper that will be evaluated.

ELL799 Natural Computing

3 credits (3-0-0)

Pre-requisites: COL106, MTL106

Introduction to natural computing uncertainty handling: probability and fuzzy logic; evolutionary computing and problem solving as search; swarm intelligence ant colonies, swarm robotics; immunocomputing; introduction to DNA computing; basics of quantum computing.

JVD799 Minor Project

6 credits (0-0-12)

ELD800 Minor Project (EEA)

3 credits (0-0-6)

To be decided by the project supervisor.

ELL800 Numerical Linear Algebra and Optimization in Engineering

3 credits (3-0-0)

Basics of Linear Algebra; Matrix decomposition - LU, LDU, QR and Cholesky factorization; Householder reflection, Givens rotation; Numerical implications of SVD; Numerical Solution for Linear Systems; Algorithm Stability; Problem Conditioning; Pivoting and scaling; Least Square Solutions; Numerical Matrix eigenvalue methods; Sparse Systems; Iterative methods for large systems; Krylov, Arnoldi, Lanczos methods; Numerical Optimization techniques - Conjugate gradient method, Linear and quadratic programming, Spectral and Pseudo-spectral methods.

ELP800 Control Systems Laboratory*1 credit (0-0-2)*

Basics of Sensors and Actuators, Study of AC and DC Motors, Linear Systems, Analog and Digital Motors, Synchros, Temperature Control.

ELD801 Major Project Part I*6 credits (0-0-12)*

To be decided by the project supervisor.

ELL801 Nonlinear Control*3 credits (3-0-0)*

Overview of nonlinear control, Lyapunov stability for autonomous and non-autonomous systems, Input-Output Stability and Input-to-State Stability, Passivity analysis and applications, Absolute Stability, Incremental stability analysis, Lyapunov-based feedback control design, Feedback linearization and backstepping, Sliding mode control, Nonlinear observer design.

ELP801 Advanced Control Laboratory*2 credits (0-0-4)*

Magnetic Levitation System, Twin Rotor MIMO System, Gyroscope, Ball and Beam System, Embedded Control System, Mobile Robotic System.

JTD801 Major Project-I

*6 credits (0-0-12)***JVD801 Major Project-I***12 credits (0-0-24)***JVS801 Independent Study***3 credits (0-3-0)***ELD802 Major Project Part II***12 credits (0-0-24)*

To be decided by the project supervisor.

ELL802 Adaptive and Learning Control*3 credits (3-0-0)*

Introduction to adaptive control, Review of Lyapunov stability theory, Direct and indirect adaptive control, Model reference adaptive control, Parameter convergence, persistence of excitation, Adaptive backstepping, Adaptive control of nonlinear systems, Composite adaptation, Neural Network-based control, Repetitive learning control, Reinforcement learning-based control, Predictive control, Robust adaptive control.

JVD802 Major Project-II*12 credits (0-0-24)***ELL803 Model Reduction in Control***3 credits (3-0-0)*

Introduction to Model Reduction; Sources of Large Models - Circuits, Electromagnetic Systems, Mechanical Systems; Discretization Methods - Finite Difference Method (FDM), Finite Element Method (FEM); Classical Model Reduction Methods - Pade Approximation, Moment matching, Routh Approximants; Modern Methods - Modal Model Reduction Methods, SVD (Gramian) based methods, Krylov based methods, SVD-Krylov based methods; MOR for Nonlinear Systems - SVD & POD Methods; Model Reduction in Control; Control Design on Reduced Models - Sub-optimal control; Sliding Mode Control as model reducing control - First Order SM, Higher Order Sliding Mode.

ELL804 Robust Control*3 credits (3-0-0)*

Modeling of uncertain systems, Signals and Norms, Lyapunov theory for LTI systems

Passive systems - frequency domain, Passive systems - time domain, Robust Stability and performance, Stabilizing controllers - Coprime

factorization, LQR, LQG problems

Ricatti equations and solutions, H-infinity control and mu-synthesis, Linear matrix inequalities for robust control, Ricatti equation solution through LMI.

ELL805 Networked and Multi-Agent Control Systems*3 credits (3-0-0)*

Overview of networked systems, Graph Theory Fundamentals, Graph-based Network Models, Network Optimization, Consensus Problem: cooperative control, leader-follower architecture.

Control under Communication Constraints, Formation Control, Swarming and Flocking

Collision Avoidance, Game Theoretic Control of Multi-Agent Systems,

Applications: Multi-robot/vehicle coordination, Sensor Networks, Social Networks, Smart Grids, Biological Networks.

EEL806 Scientific Visualization*3 credits (3-0-0)***ELL806 Modeling and Control of Distributed Parameter Systems***3 credits (3-0-0)*

Overview: Motivation and examples (wave propagation, fluid flow, network traffic, electromagnetism), Modeling of Distributed Parameter Systems (DPS): Parabolic and Hyperbolic PDEs, Analytic and Numerical Solution of PDEs, Lyapunov stability of DPS Boundary control and Observer Design of DPS, Discretization of Distributed Parameter Models: Finite Difference, Finite Element and Boundary Elements, Reduction of FEM models, Applications: Control of systems with time delays, control of fluid flow, network control.

ELL807 Stochastic Control*3 credits (3-0-0)*

Overview of stochastic systems with examples, Modeling of Stochastic Systems: Continuous and discrete-time models subjected to noise, Markov Decision Processes, Introduction to Stochastic Calculus and Stochastic Differential Equations, Stochastic Stability, Stochastic Optimal Control with complete and partial observations, finite and infinite horizon problems, Linear and nonlinear Filtering, Separation Principle, Linear quadratic Gaussian Problem, Stochastic Dynamic Programming, Stochastic Adaptive Control, Applications: Finance, operations research, biology.

ELL808 Advanced Topics in Systems and Control*3 credits (3-0-0)*

To be decided by the Instructor when floating this course: Can be anything that is related to systems and control engineering but is not covered in any of the established courses.

ELD810 Minor Project (Communication Engineering)*3 credits (0-0-6)***ELL810 Cyber Security and Information Assurance***3 credits (3-0-0)*

Introduction to cyber security, information assurance, computer security and the associated threat, attack, adversary models, identity representation, management and access control, intrusion detection, security at different levels: network, system, user, program security, network security, wireless security, mobile security, hardware security and the security of cyber physical systems.

ELD811 Major Project Part-I (Communication Engineering)*6 credits (0-0-12)***ELD812 Major Project Part-II***12 credits (0-0-24)*

ELL812 Microwave Propagation and Systems*3 credits (3-0-0)*

The wireless channel (physical modeling, linear time-varying system, discrete-time baseband model, time and frequency coherence), point-to-point communication (detection, diversity, spatial multiplexing), cellular systems (multiple access and interference management), capacity of point-to-point wireless channels (single and multi-antenna), capacity of single-antenna multiuser channels, point-to-point multi-antenna (MIMO) channels and spatial multiplexing, point-to-point MIMO capacity and multiplexing architectures.

ELL813 Advanced Information Theory*3 credits (3-0-0)***ELL814 Wireless Optical Communications***3 credits (3-0-0)*

General introduction, optical channel modeling, background noise calculations, Modulation techniques: M-PPM, OOK, mxn PAM, subcarrier modulation, DPPM, DHPIM, DAPPM, psd and bandwidth requirement evaluation, Detection techniques - Photon counter, PMT, coherent techniques, bit error rate evaluation in presence of atmospheric turbulence, concept of adaptive threshold, effect of turbulence and weather conditions viz., drizzle, haze fog on error performance and channel capacity, link availability.

ELL815 MIMO Wireless Communications*3 credits (3-0-0)*

Introduction to space-time diversity, MIMO channel, MIMO information theory, error probability analysis, transmit diversity and space-time coding, linear STBC design, differential coding for MIMO, precoding, multiuser MIMO; There are no laboratory or design activities involved with this course.

ELL816 Satellite Communication*3 credits (3-0-0)*

Introduction to satellite communication and orbital theory, satellite antennas, satellite link design, channel models for satellite links, modulation, multiple access techniques for satellite communication, VSAT, introduction to MIMO systems and error analysis, multiple antenna based satellite communication, hybrid satellite-terrestrial communication system

There are no laboratory or design activities involved with this course.

ELL817 Access Networks*3 credits (3-0-0)*

Contents: Types of access networks, wired (copper and optical) and wireless access networks, management, dimensioning and scaling of access networks, access network design.

ELL818 Telecommunication Technologies*3 credits (3-0-0)*

Types of Data Networks, types of access and edge networks, core networks, OSS/NMS and Telecom Management network (TMN), Teletraffic Theory and Network analysis

ELL819 Introduction to Plasmonics*3 credits (3-0-0)*

EM Waves, Maxwell's Equations, Origin of Permittivity, Evanescent Waves, Surface Plasmons, Scattering and Diffraction, Spoof Surface Plasmon, Extraordinary Optical Transmission, Numerical Simulations of Surface Plasmons, Negative Index Materials.

ELL820 Photonic Switching and Networking*3 credits (3-0-0)*

Study of different types of networks, the enabling technologies and devices. Broadcast and Select network. Single and Multi-hop networks with example of Access networks, PONS etc., Wavelength Routing network, virtual topology, Metro and Wide area networks. Wavelength Routing and Assignment, Traffic Grooming and Protection, Network Control and Management, Optical packet and burst switching, Network Simulation Tools and Design guidelines.

ELL821 Selected Topics in Communication Systems and Networking-I*3 credits (3-0-0)***ELP821 Advanced Telecommunication Networks Laboratory***3 credits (0-1-4)*

To provide advanced level laboratory experiments in telecom signaling and transmission.

ELV821 Special Module in Communication Systems and Networking - II*1 credit (1-0-0)***ELL822 Selected Topics in Communication Systems and Networking-II***3 credits (3-0-0)***ELP822 Network Software Laboratory***3 credits (0-1-4)*

Contents: CASE tools, client-server programming, middleware – and use of Object Request Broker architectures, use of network emulators, using networks APIs Parlay/JAIN, service-oriented architectures, openflow and SDN, network management software design.

ELL823 Selected Topics in Information Processing-I*3 credits (3-0-0)***ELV823 Special Modules in Information Processing-II***1 credit (1-0-0)***ELL824 Selected Topics in Information Processing-II***3 credits (3-0-0)***ELD830 Minor Project***3 credits (0-0-6)***ELL830 Issues in Deep Submicron VLSI Design***3 credits (3-0-0)*

VLSI Scaling rules and their impact: Short channel effect, Sub threshold leakage current, Gate leakage, VTH and body bias; Low power design:: Technology level: 3D and 4 terminal MOSFETs, PDSOI, FDSOI, FINFET; Sub threshold leakage control: Transistor stacking in digital logic Multiple VTH, VDD designs, Dynamically adjustable VTH; Digital Circuit Design: Digital Sub-threshold Logic, Noise Immunity, Clock gating, Switching activity minimization; Analog Circuit Design: gm/ID Methodology for Design, Low power, low voltage opamp design, Subthreshold operation of opamps; Architecture level: Array Based Architectures, Parallel and Pipelined Architectures; Interconnects & Noise: Capacitive & Inductive coupling Analysis & Optimization, Power/Ground Noise, $L \cdot di/dt$ noise, Power/Ground Placement Optimization, Decoupling.

ELP830 Semiconductor Processing Laboratory*3 credits (0-0-6)*

Deposition of Semiconductor Materials and Metals: Sputter Deposition, E-Beam Deposition, and Thermal Evaporation; Photolithography; Electron-Beam Lithography; Epitaxial Growth of Semiconductors, Materials Characterization.

ELV830 Special Module in Low Power IC Design*1 credit (1-0-0)*

Special Module that focuses on special topics, development and Research problems of importance in the area of Low Power IC Design.

ELD831 Major Project Part-I (Integrated Electronic Circuits)*6 credits (0-0-12)*

ELL831 CAD for VLSI, MEMS, and Nanoassembly*3 credits (3-0-0)*

Algorithms for design, modelling, and simulation ranging from VLSI, MEMS, to nanoassembly; computer aided nano-design for materials.

ELP831 IEC Laboratory-I*3 credits (0-0-6)*

Introduction to Cadence, Learning Cadence design framework and Virtuoso environment, Design with Virtuoso schematic editor, Layouts, Learning and applying Synopsys and Xilinx tools, Circuit simulation and SPICE.

ELV831 Special Module in VLSI Testing*1 credit (1-0-0)*

Special Module that focuses on special topics, development and Research problems of importance in the area of VLSI Testing.

ELD832 Major Project Part-II*12 credits (0-0-24)***ELL832 Selected Topics in IEC-I***3 credits (3-0-0)***ELP832 IEC Laboratory-II***3 credits (0-0-6)*

Introduction to Cadence, Learning Cadence design framework and Virtuoso environment, Design with Virtuoso schematic editor, Layouts, Learning and applying Synopsys and Xilinx tools, Circuit simulation and SPICE.

ELV832 Special Module in Machine Learning*1 credit (1-0-0)*

Special Module that focuses on special topics, development and Research problems of importance in this area.

ELL833 CMOS RF IC Design*3 credits (3-0-0)*

Historical Aspects – From Maxwell to Current Wireless standards; The bridge between communication system designer and RF IC Designer: a) Comm. system characterization, b) RF System Characterization ; Transceiver Architectures – Motivation for the individual blocks; Lumped, passive RLC, RF properties of MOS, Tuned Amplifiers; ; LNAs: Noise sources, Cascades and LNA Design; Mixers – passive and active mixers ; Oscillators: Analysis Fundamentals, Inductors, LC Oscillators and VCOs; Frequency synthesizers: Principles, Integer N vs Fractional PLL, Design Concepts.

ELP833 Device and Materials Characterization Laboratory*3 credits (0-0-6)*

Skill development in semiconductor modeling and characterization through hands on electrical characterization experiments. This includes wafer-level DC and RF characterization of p-n junction diode, MOS capacitor and transistor, photo-electric characterization of solar cells, TCAD and compact modeling of these devices, Materials Characterization (SEM, AFM, TEM, etc.).

ELV833 Special Module in Semiconductor Business Management*1 credit (1-0-0)*

To educate students about semiconductor business. This includes business domains in semiconductors, latest business challenges, market trends and forecasts, business planning and incubation, execution and delivery, technical and financial analysis of R&D , business and finance models of chip manufacturing units (or fabs.), foundries, and solar power plants.

ELL834 Selected Topics in IEC-II*3 credits (3-0-0)***ELV834 Special Module in Nanoelectronics***1 credit (1-0-0)*

Special Module that focuses on special topics, development and Research problems of importance in the area of Nano Electronics.

ELD850 Minor Project*3 credits (0-0-6)***ELL850 Digital Control of Power Electronics and Drive Systems***3 credits (3-0-0)*

Review of Digital signal processors, Laplace transforms, Theory of sampling, z-transformations, sampling techniques, Digital PWM generation schemes, Realization of different PWM's using DSP's, Control of DC-DC Converters, Inverters, DC and AC Machines.

ELP850 Electrical Machines Laboratory*1.5 credits (0-0-3)*

Experiments on Electrical Machines and their control.

ELT850 Industrial Training and Seminar*3 credits (0-0-6)***ELD851 Major Project Part-I***6 credits (0-0-12)***ELL851 Computer Aided Design of Electrical Machines***3 credits (3-0-0)*

Introduction of Standards and standardizations, specifications, frame size, basic design methodology and engineering considerations. Properties of electric, magnetic and insulating materials. Choice of materials, frames etc. Computerization of design procedures. Optimization techniques and their application to design problems. Design of large and h.p. motors. Database and knowledge based expert systems. Development of PC based software.

ELP851 Power Electronics Laboratory*1.5 credits (0-0-3)*

Experiments on Power electronic converters and their control.

ELD852 Major Project Part-II*12 credits (0-0-24)***ELL852 Condition Monitoring of Electrical Machines***3 credits (3-0-0)*

The course includes the need for condition monitoring. Three main subdivisions of the course are types of fault and their symptoms, diagnostic methods to identify these faults and a deep signal processing analysis for fault diagnosis. The various components prone to fault are stator, rotor, shaft, gear box, bearing etc. The diagnosis methods include diagnosis based on temperature, infrared signal, vibration, noise, motor current signature analysis etc. various signal processing techniques such as fuzzy logic, neural network from fault diagnosis point of view are also included in this course.

ELP852 Electrical Drives Laboratory*1.5 credits (0-0-3)*

Experiments on drive systems with converter fed dc and ac drives and their control.

ELL853 Advanced Topics in Electrical Machines*3 credits (3-0-0)*

Introduction to Advanced Topics in Electrical Machines, Synchronous Reluctance Machines, Hybrid Motors, Linear Motors, Superconducting Machines, PCB Motors, Micro motors, Wound Pole Machines. Applications of all these advanced motors in field of Robotics, Automation, Electric Vehicles, pumping etc. The rating consideration and special advantages with these motors in various practical or field conditions is primary objective of this course. Other Advanced machines, Case Studies, Computer Aided Simulation of Electrical Machines are added for enhanced understanding of the topic.

ELP853 DSP Based Control of Power Electronics and Drives Laboratory

1.5 credits (0-0-3)

Experiments on the DSP/Digital signal controllers, Interfacing peripherals to DSP, Assembly language programming, Real-time voltage/ current, speed sensing signal and processing, PWM strategies realization through DSP and controlling power electronic and Drive Systems.

ELL854 Selected Topics in Electrical Machines

3 credits (3-0-0)

Recent developments in the area of electrical machines.

ELP854 Electrical Machines CAD Laboratory

3 credits (0-1-4)

Computer aided design of electrical machines.

ELL855 High Power Converters

3 credits (3-0-0)

Introduction to High Power devices – IGBT, Thyristor, IGCT. Different topologies of high power converters – Voltage Source and current source converter, 2- level converters, 3 level NPC converter, Cascaded H-Bridge Multilevel Converters, Modular multilevel converters. Pulse width modulation techniques for high power converters – Level shifted PWM, Phase shifted PWM, Space vector PWM for multilevel converters. Design of high power converter components, operational issues, fault tolerant operation, reliability, mechanical design. Design of filters for high power converters. Relevant IEEE and IEC standards for high power converters.

ELP855 Smart-Grids Laboratory

3 credits (0-1-4)

Experiments related to smart-grids measurement and control.

ELL856 Advanced Topics in Power Electronics

3 credits (3-0-0)

Upcoming power electronic devices- SiC and GaN devices. Design of power electronic converters, Introduction to soft-switching in dc-dc and dc-ac applications.

ELL857 Selected Topics in Power Electronics

3 credits (3-0-0)

Recent developments in power electronics.

ELL858 Advanced Topics in Electric Drives

3 credits (3-0-0)

Advanced PWM Techniques. Control of switched reluctance motor drives. Control of slip-ring induction motor drives. Self-commissioning and self-adaptation techniques in drives. Sensor-less techniques in drives. Fault tolerant controllers and converters. Other recent topics on drives.

ELL859 Selected Topics in Electric Drives

3 credits (3-0-0)

Recent developments in the area of electric drives.

ELD870 Minor Project-I

3 credits (0-0-6)

To be decided by the project supervisor

ELL870 Restructured Power System

3 credits (3-0-0)

Philosophy of market models, Concepts in micro-economics, Centralized and de-centralized Dispatch Philosophies, Congestion Management, Ancillary Service Management, Transmission Pricing Methods, Loss Allocation Algorithms, Locational Marginal Price (LMP) calculation and properties, Financial Transmission Rights (FTRs), Transmission Expansion Planning, Market Power, Working of International Power Markets, Restructuring Issues in Indian Power Sector.

ELP870 Power System Lab 1

3 credits (0-1-4)

Power flow studies, fault studies, state estimation, security analysis, robust power flow methods, power flow with uncertain data.

ELD871 Major Project Part-I

6 credits (0-0-12)

To be decided by the project supervisor.

ELL871 Distribution System Operation and planning

3 credits (3-0-0)

Structure of distribution system, modeling of system components, power flow, fault studies, state estimation, optimal power flow, optimal feeder reconfiguration, optimum resources planning, incorporation of DGs in operation and planning.

ELP871 Power System Lab 2

3 credits (0-1-4)

ELD872 Major Project Part-II

12 credits (0-0-24)

To be decided by the project supervisor.

ELL872 Selected Topics in Power System

3 credits (3-0-0)

To be decided by the Instructor when floating this course: It can be anything that is related to power system, but is not covered in any of the established courses.

ELL873 Power System Transient

3 credits (3-0-0)

Origin and nature of transients and surges. Lumped and distributed circuit representations. Line energisation and de-energisation transients, current chopping, short-line faults, trapped charge effects, effect of source, control of transients, Lightning, effect of tower footing resistance, travelling waves, insulation coordination, circuit breakers duty, surge arresters, overvoltage limiting devices.

ELL874 Power System Reliability

3 credits (3-0-0)

Review of basic probability theory, reliability theory, network modeling and evaluation of simple and complex systems, generation system reliability – concept of loss of load probability, energy not served, transmission system reliability, component failure, distribution system reliability with perfect and imperfect switching.

ELD880 Major Project Part 1

6 credits (0-0-12)

ELL880 Special Topics in Computers 1

3 credits (3-0-0)

ELS880 Independent Study

3 credits (3-0-0)

ELD881 Major Project Part 2

12 credits (0-0-24)

ELL881 Special Topics in Computers 2

3 credits (3-0-0)

ELL882 Large-Scale Machine Learning

3 credits (3-0-0)

Introduction, Randomized Algorithms, Matrix Approximations (low-rank approximation, decomposition, sparse matrices, matrix completion), Large Scale Optimization, Kernel Methods (fast training), Boosted Decision trees, Dimensionality Reduction (linear and nonlinear methods), Distributed Gibbs Sampling, Sparse Methods/Streaming (sparse coding...); Applications.

ELL883 Embedded Intelligence

3 credits (3-0-0)

basics of embedded, learning, and adaptive systems; sensors, nature

of dynamic environments, hardware aspects.

ELL884 Information Retrieval

3 credits (3-0-0)

Motivation, evaluation, classical IR models, Indexing, ML techniques, Semantic search, MIR, Web-scale information retrieval, Query processing, User interfaces.

ELL885 Machine Learning for Computational Finance

3 credits (3-0-0)

basics of embedded, learning, and adaptive systems; sensors, nature of dynamic environments, hardware aspects.

ELL886 Big Data Systems

3 credits (3-0-0)

Introduction; Hadoop, Map-Reduce, GFS/HDFS, Bigtable/HBASE ; Extension of Map-Reduce: iMap-reduce (iterative), incremental map-reduce. SQL and Data-parallel programming, DryadLINQ. Data-flow parallelism vs. message passing. Data locality. Memory hierarchies. Sequential versus random access to secondary storage. NoSQL systems. NewSQL systems. Finding similar items and LSH; Search Technology: link analysis and Page-rank algorithm; Large Scale Graph Processing; Mining Streaming Data and Realtime analytics: Window semantics and window joins. Sampling and approximating aggregates (no joins). Querying histograms. Maintaining histograms of streams. Use of Haar wavelets. Incremental and online query processing: online aggregation.

ELL887 Cloud Computing

3 credits (3-0-0)

Introduction; Example System: Apple iCloud, Amazon-AWS; Fundamental Concepts: Cloud Characteristics, Cloud delivery models; Cloud Enabling Technology: broad-band network, virtualisation technology; Cloud Infrastructure Mechanisms: Logical Network Perimeter, Virtual Server, Cloud Storage Devices; Cloud Architecture: Workload Distribution Architecture, Resource Pooling Architecture, Dynamic Scalability Architecture, Hypervisor Clustering Architecture, Load Balanced Virtual Server Instances Architecture, Elastic Resource Capacity Architecture, Elastic Disk Provisioning Architecture, Redundant Storage Architecture; Cloud Security: Encryption, Identity and Access management, Cloud-based Security Groups; Working with Cloud: Building Service Platforms, Cost Metrics, Pricing Models.

ELL888 Advanced Machine Learning

3 credits (3-0-0)

Advanced topics in machine learning, including Nonlinear Dimension Reduction, Maximum Entropy, Exponential Family Models, Graphical Models; Computational Learning Theory, Structured Support Vector Machines, Feature Selection, Kernel Selection, Meta-Learning, Multi-Task Learning, Semi-Supervised Learning, Reinforcement Learning, Approximate Inference, Clustering, and Boosting.

ELL889 Protocol Engineering

3 credits (3-0-0)

Principles, stages, specification formalisms (UML, SDL, ASN.1) of telecom protocol design, protocol software development process, computer aided protocol engineering, verification and testing of protocols, object oriented techniques in protocol development, kernel level development and programming of protocols.

ELL890 Computational Neuroscience

3 credits (3-0-0)

Fundamentals of brain anatomy and physiology, signals of brain, Brain signal recording and imaging techniques, Human experimentation study design, Processing the X-D neural data, Machine learning approaches, Graph theory and neural networks, Multivariate pattern analysis in 4D Imaging data, Statistical inferences, student projects and presentations.

ELL891 Computational Linguistics

3 credits (3-0-0)

Introduction to language and linguistics; Mathematical foundations:

statistics and machine learning; Introduction to corpus-based computational linguistics; Lexical analysis; Syntactic analysis; Semantic analysis; Discourse analysis; Psycholinguistics, computational cognitive models of language processing and evolution; Assignments and practical exercises involving the application of these techniques to real-world corpora.

ELL892 Internet Technologies

3 credits (3-0-0)

Web and service oriented architectures, dynamic web site programming (client side and server side), web application development, web based repositories, UI design, XML, Web 2.0 and the semantic web, applications.

ELL893 Cyber-Physical Systems

3 credits (3-0-0)

Introduction: core principles behind CPSs; Specification of CPS, CPS models: Continuous, Discrete, Hybrid, Compositional; Abstraction and System Architecture, Design by Invariants, Sensing and Fusion, Cloud of Robots/CPS; Case Studies: Healthcare, Smart Grid, Transportation.

ELL894 Network Performance Modeling and Analysis

3 credits (3-0-0)

Network performance models and classifications, Hidden Markov Models (HMM), Delay and throughput analysis using Markov models, Performance analysis with multi-class traffic, Renewal theory and regenerative processes, Performance analysis with semi-Markov traffic characteristics, Network performance analysis with interactive servers, Practical network traffic characterization, Network performance stability, Introduction to dynamic programming, Example network modeling scenarios in various engineering applications.

ELL895 Network Security

3 credits (3-0-0)

Introduction to cryptography, public key distribution and user authentication, TLS and wireless network security, secure email and PGP, IP security, system security - intrusion, malicious software and firewalls.

ELL896 Mobile Computing

3 credits (3-0-0)

Overview of mobile computing; introduction to GSM, 3GPP, 4G LTE, LTE-A standards; wireless networking protocols: mobile IP, ad hoc networks, wireless TCP; cognitive radio networks; data broadcasting; location and context awareness; QoS, QoE; disconnected or weakly connected operations; protocol and resource optimization; wireless security issues.

ELL897 Network Management

3 credits (3-0-0)

Activities, methods, operational procedures, tools, communications interfaces, protocols, and human resources that pertain to the operation, administration, maintenance, and provisioning of communications networks, network management standards, technologies; functional areas of fault management, configuration management, accounting management, performance management, and security management, major Internet and telecommunications standards for network management: SNMPv3, RMON, CMIP and TMN.

ELL898 Pervasive Computing

3 credits (3-0-0)

Introduction, computer and network architectures for pervasive computing, mobile computing mechanisms, human-computer interaction using speech and vision, pervasive software systems, location mechanisms, practical techniques for security and user-authentication, and experimental pervasive computing systems.

ELL899 Testing and Fault Tolerance

3 credits (3-0-0)

Introduction to biological neural systems, artificial neural network models, feedforward models, recurrent systems, analysis and applications.

Department of Humanities and Social Sciences

HUL232 Modern Indian Fiction in Translation

4 credits (3-1-0)

Students would be introduced to the conditions, beginning in 19th century colonial rule in India, which led to the emergent Indian middle-class intelligentsia to experiment with European forms of literature but striving for an alternative expression. Indian languages became the medium through which writers sought to address issues of identity, tradition, modernity, gender, the rural and the urban, the private and the public. The course will study the various experiments in narration, language, characterization and style undertaken by authors to shape these themes.

HUL232 Modern Indian Fiction in Translation

4 credits (3-1-0)

Students would be introduced to the conditions, beginning in 19th century colonial rule in India, which led to the emergent Indian middle-class intelligentsia to experiment with European forms of literature but striving for an alternative expression. Indian languages became the medium through which writers sought to address issues of identity, tradition, modernity, gender, the rural and the urban, the private and the public. The course will study the various experiments in narration, language, characterization and style undertaken by authors to shape these themes.

HUL235 Rise of the Novel

4 credits (3-1-0)

The socio-political contexts which lead to the rise of the novel in Europe – the emergence of print, the expansion of literacy, and the establishment of capitalism. Through a close reading of selected texts accompanying concepts like the rise of the modern individual, varied narrative techniques and national consciousness. The emerging sub-genres of the novel – the comic, the picaresque, the historical novel and the realist novel. The linkage of the novel to the colonial project and its influence on world literature.

HUL235 Rise of the Novel

4 credits (3-1-0)

The socio-political contexts which lead to the rise of the novel in Europe – the emergence of print, the expansion of literacy, and the establishment of capitalism. Through a close reading of selected texts accompanying concepts like the rise of the modern individual, varied narrative techniques and national consciousness. The emerging sub-genres of the novel – the comic, the picaresque, the historical novel and the realist novel. The linkage of the novel to the colonial project and its influence on world literature.

HUL236 An Introduction to Drama

4 credits (3-1-0)

Brief history of the development and importance of drama in Western and Indian contexts.

Readings from both ancient and contemporary drama theorists.

Generic differences between different forms of drama such as tragedy, comedy, realist, 'folk', Absurd, etc.

Detailed study of important examples of different forms of drama.

HUL236 An Introduction to Drama

4 credits (3-1-0)

Brief history of the development and importance of drama in Western and Indian contexts.

Readings from both ancient and contemporary drama theorists.

Generic differences between different forms of drama such as tragedy, comedy, realist, 'folk', Absurd, etc.

Detailed study of important examples of different forms of drama.

HUL237 Contemporary Fiction

4 credits (3-1-0)

Approaches to contemporary fiction Looking at contemporary styles - realism, modernism, postmodernism

Contemporary versions of classical genres - the diary, epistolary form, epic, etc.

the relationship of society with science and technology through fiction the relationship between self and society through fiction Race, nationality, culture and identity - contemporary forms.

HUL237 Contemporary Fiction

4 credits (3-1-0)

- Approaches to contemporary fiction

- Looking at contemporary styles - realism, modernism, postmodernism

- Contemporary versions of classical genres - the diary, epistolary form, epic, etc.

- the relationship of society with science and technology through fiction

- the relationship between self and society through fiction

- Race, nationality, culture and identity - contemporary forms.

HUL239 Indian Fiction in English

4 credits (3-1-0)

The course involves a detailed study of 3-4 texts corresponding to the distinct phases of literary activity in the genre: the early period of the 1940s and 50s in which writers like Mulk Raj Anand, Raja Rao and R.K. Narayan made their presence felt, before Salman Rushdie, and more quietly, Amitav Ghosh and Vikram Seth, erupted into the scene in the 1980s, spawning a generation of writers attaining international acclaim - Arundhati Roy, Aravind Adiga, Kiran Desai, and many others. Some of the questions that will be addressed are: Who constitutes the main audience for this writing, and (how) does the writing cater to it? How does one position the expatriate Indian writer both residing and publishing abroad? How does English become an Indian language? Is there a thematic congruence in the novels that fall under this category, and does it differ from the thematic concerns of novels written in other Indian languages? Students will be encouraged to read a novel in at least one other Indian language in order to allow them to pose these questions in a more pointed manner.

HUL239 Indian Fiction in English

4 credits (3-1-0)

The course involves a detailed study of 3-4 texts corresponding to the distinct phases of literary activity in the genre: the early period of the 1940s and 50s in which writers like Mulk Raj Anand, Raja Rao and R.K. Narayan made their presence felt, before Salman Rushdie, and more quietly, Amitav Ghosh and Vikram Seth, erupted into the scene in the 1980s, spawning a generation of writers attaining international acclaim - Arundhati Roy, Aravind Adiga, Kiran Desai, and many others. Is there a thematic congruence in the novels that fall under this category, and does it differ from the thematic concerns of novels written in other Indian languages? Students will be encouraged to read a novel in at least one other Indian language in order to allow them to pose these questions in a more pointed manner.

HUL240 Indian English Poetry

4 credits (3-1-0)

The aim of this course will be to read the poems of Indian English Writers (pre and post-Independence), with specific reference to the articulation of their identity. Some of the perspectives from which the poems will be discussed include the notion of home (childhood, family and ancestors); land (history, geography, community, caste and contemporary politics); language (the dialogue between the different languages in the creative repertoire of the poets); and culture (ritual, traditions, legends and myths). The course will also look at the differences between the resident and expatriate poets vis-a-vis the conflicts and resolutions as expressed in their poems.

HUL240 Indian English Poetry

4 credits (3-1-0)

The aim of this course will be to read the poems of Indian English

Writers (pre and post-Independence), with specific reference to the articulation of their identity. Some of the perspectives from which the poems will be discussed include the notion of home (childhood, family and ancestors); land (history, geography, community, caste and contemporary politics); language (the dialogue between the different languages in the creative repertoire of the poets); and culture (ritual, traditions, legends and myths). The course will also look at the differences between the resident and expatriate poets vis-a-vis the conflicts and resolutions as expressed in their poems.

HUL242 Fundamentals of Language Sciences

4 credits (3-1-0)

This course provides answers to basic questions about the nature and constitution of human language in the mind/brain of native speakers. Varied aspects of linguistic organization, including structures of sounds, words and sentences are considered to understand the core universals of all languages as well as their variations. Cases of feral children, language deficiencies and cognition-language interactions are also highlighted.

HUL242 Fundamentals of Language Sciences

4 credits (3-1-0)

This course provides answers to basic questions about the nature and constitution of human language in the mind/brain of native speakers. Varied aspects of linguistic organization, including structures of sounds, words and sentences are considered to understand the core universals of all languages as well as their variations. Cases of feral children, language deficiencies and cognition-language interactions are also highlighted.

HUL243 Language and Communication

4 credits (3-1-0)

This course offers a wide-ranging introduction to, and analysis of, varieties of spoken and written language. From political oratory to examination answer scripts to computer codes, not to mention jokes, riddles and poetry, human language offers an amazingly rich set of structures for expressing and conveying our thoughts, intentions and desires. The course will consider some of these linguistic structures and communicative strategies in detail, beginning with early childhood development. How is it that children in every culture learn language so effortlessly despite its great complexity? The course aims to introduce students to a set of theories that address this and other puzzles and mysteries in the arena of language studies. Finally, since a central focus of the course is communication, it will strive to be as interactive as possible, with lots of scope for the discussion and working out of actual 'problems' in language use.

HUL243 Language and Communication

4 credits (3-1-0)

This course offers a wide-ranging introduction to, and analysis of, varieties of spoken and written language. From political oratory to examination answer scripts to computer codes, not to mention jokes, riddles and poetry, human language offers an amazingly rich set of structures for expressing and conveying our thoughts, intentions and desires. The course will consider some of these linguistic structures and communicative strategies in detail, beginning with early childhood development. How is it that children in every culture learn language so effortlessly despite its great complexity? The course aims to introduce students to a set of theories that address this and other puzzles and mysteries in the arena of language studies. Finally, since a central focus of the course is communication, it will strive to be as interactive as possible, with lots of scope for the discussion and working out of actual 'problems' in language use.

HUL251 Introduction to Logic

4 credits (3-1-0)

In this course, students are introduced to fundamentals of informal logic and verbal analysis, material and formal fallacies of reasoning often found ordinary discourse, deductive and Inductive reasoning, validity and soundness, formal rules and principles of the deductive system of Aristotelian logic, traditional square of opposition;

propositional calculus; first order predicate calculus; the modern square of opposition and the problem of existential import; identity and definite descriptions; methods for formulating natural language arguments in symbolic forms and techniques for checking their validity; various meta-logical theorems and their proofs.

HUL251 Introduction to Logic

4 credits (3-1-0)

In this course, students are introduced to fundamentals of informal logic and verbal analysis, material and formal fallacies of reasoning often found ordinary discourse, deductive and Inductive reasoning, validity and soundness, formal rules and principles of the deductive system of Aristotelian logic, traditional square of opposition; propositional calculus; first order predicate calculus; the modern square of opposition and the problem of existential import; identity and definite descriptions; methods for formulating natural language arguments in symbolic forms and techniques for checking their validity; various meta-logical theorems and their proofs.

HUL253 Moral Literacy and Moral Choices

4 credits (3-1-0)

This is primarily a course in applied ethics. It will focus primarily on questions like: What is the meaning of right action? Can ethical assertions be true or false? Is morality relative to society? Or can we say that acts have universal moral content? The course discussions will help to demonstrate that morality is not always self-evident and that rational morality must come in place of taboo based moralities.

HUL253 Moral Literacy and Moral Choices

4 credits (3-1-0)

This is primarily a course in applied ethics. It will focus primarily on questions like: What is the meaning of right action? Can ethical assertions be true or false? Is morality relative to society? Or can we say that acts have universal moral content? The course discussions will help to demonstrate that morality is not always self-evident and that rational morality must come in place of taboo based moralities.

HUL256 Critical Thinking

4 credits (3-1-0)

What makes philosophical thinking radically critical?

Investigation of the nature of knowledge about the world and justification of knowledge claims.

Metaphysical understanding of the Absolute and Mind-Body relation.

The nature of ethical and aesthetic beliefs and attitudes as part of understanding the nature of values.

The discussion of the above issues will be influenced by three philosophical orientational perspectives: Anglo-American Analytic, Continental Phenomenological and Classical Indian.

HUL256 Critical Thinking

4 credits (3-1-0)

What makes philosophical thinking radically critical?

Investigation of the nature of knowledge about the world and justification of knowledge claims.

Metaphysical understanding of the Absolute and Mind-Body relation.

The nature of ethical and aesthetic beliefs and attitudes as part of understanding the nature of values.

The discussion of the above issues will be influenced by three philosophical orientational perspectives: Anglo-American Analytic, Continental Phenomenological and Classical Indian.

HUL258 Social and Political Philosophy

4 credits (3-1-0)

As closely aligned areas in philosophy– social philosophy with the role of individual in society and political philosophy with the role of government- this course bridges divides between social theory, political philosophy, and the history of social and political thought as also between empirical and normative analysis through perspectives

from metaphysics, epistemology and axiology. A range of socio-political thinkers, theories and concepts will be taught. It will provide a broad survey of fundamental social and political questions in current contexts discussing philosophical issues central to political thought and radical critiques of current political theories.

HUL258 Social and Political Philosophy

4 credits (3-1-0)

As closely aligned areas in philosophy– social philosophy with the role of individual in society and political philosophy with the role of government- this course bridges divides between social theory, political philosophy, and the history of social and political thought as also between empirical and normative analysis through perspectives from metaphysics, epistemology and axiology. A range of socio-political thinkers, theories and concepts will be taught. It will provide a broad survey of fundamental social and political questions in current contexts discussing philosophical issues central to political thought and radical critiques of current political theories.

HUL261 Introduction to Psychology

4 credits (3-1-0)

Psychological Science- Assumptions, schools, methods of doing psychology research, The relationship between brain, body and mental functioning, Sensation, perception and making sense of the world, Consciousness, Life span development and motor and language development, Nature and nurture controversy, The learning process and some important explanations of how we learn, Meaning of motivation and explanations, Theories of emotions and expression and regulation of emotions, Basic cognitive processes, Language development, why we remember and why we forget- some explanations, Different kinds of intelligence, explanations of creativity, Differences among individuals and explanations for personality differences, Application of psychology to everyday life- enhancing health and well-being, performance, social relations, and sensitivity to environmental, social and cultural contexts.

HUL261 Introduction to Psychology

4 credits (3-1-0)

Psychological Science- Assumptions, schools, methods of doing psychology research, The relationship between brain, body and mental functioning, Sensation, perception and making sense of the world, Consciousness, Life span development and motor and language development, Nature and nurture controversy, The learning process and some important explanations of how we learn, Meaning of motivation and explanations, Theories of emotions and expression and regulation of emotions, Basic cognitive processes, Language development, why we remember and why we forget- some explanations, Different kinds of intelligence, explanations of creativity, Differences among individuals and explanations for personality differences, Application of psychology to everyday life- enhancing health and well-being, performance, social relations, and sensitivity to environmental, social and cultural contexts.

HUL265 Theories of Personality

4 credits (3-1-0)

Personality: Meaning & Assessment. Psychoanalytic & Neo-Psychoanalytic Approach ; Behavioural Approach; Cognitive Approach; Social- Cognitive Approach; Humanistic Approach; The Traits Approach; Models of healthy personality: the notion of the mature person, the self-actualizing personality etc. Personality disorders; Psychotherapeutic techniques and Yoga & Meditation; Indian perspective on personality; Personality in Socio- cultural context.

HUL265 Theories of Personality

4 credits (3-1-0)

Personality: Meaning & Assessment. Psychoanalytic & Neo-Psychoanalytic Approach ; Behavioural Approach; Cognitive Approach; Social- Cognitive Approach; Humanistic Approach; The Traits Approach; Models of healthy personality: the notion of the mature person, the self-actualizing personality etc. Personality disorders; Psychotherapeutic techniques and Yoga & Meditation; Indian perspective on personality; Personality in Socio- cultural context.

HUL267 Positive Psychology

4 credits (3-1-0)

Positive Psychology: A historical and contextual overview; Relationship between Indian Psychology and Positive Psychology; Correlates and predictors of life satisfaction and subjective well-being across various cultures; Latest researches on self-esteem, optimism, flow, post-traumatic growth, positive ageing, character strengths, etc.; Major theories and models within positive psychology – Self-Determination theory, Broaden-and-Build theory, Authentic Happiness, Psychological Well-being, etc., Interpersonal character strengths & well- being; Specific Coping Approaches: meditation, yoga and spirituality; Future of the Field.

HUL267 Positive Psychology

4 credits (3-1-0)

Positive Psychology: A historical and contextual overview; Relationship between Indian Psychology and Positive Psychology; Correlates and predictors of life satisfaction and subjective well-being across various cultures; Latest researches on self-esteem, optimism, flow, post-traumatic growth, positive ageing, character strengths, etc.; Major theories and models within positive psychology – Self-Determination theory, Broaden-and-Build theory, Authentic Happiness, Psychological Well-being, etc., Interpersonal character strengths & well- being; Specific Coping Approaches: meditation, yoga and spirituality; Future of the Field.

HUL271 Introduction to Sociology

4 credits (3-1-0)

The course will introduce students to the study of sociology and some basic underpinnings of sociological theory and methodology. The emergence of sociology as a scientific discipline is examined in the context of the development of Industrial society in Western Europe. The course will examine the writings of key classical social thinkers such as Marx, Durkheim and Weber as well as more contemporary theorists such as Michel Foucault, with a view to understanding various sociological approaches to modern industrial society.

HUL271 Introduction to Sociology

4 credits (3-1-0)

The course will introduce students to the study of sociology and some basic underpinnings of sociological theory and methodology. The emergence of sociology as a scientific discipline is examined in the context of the development of Industrial society in Western Europe. The course will examine the writings of key classical social thinkers such as Marx, Durkheim and Weber as well as more contemporary theorists such as Michel Foucault, with a view to understanding various sociological approaches to modern industrial society.

HUL272 Introduction to the Sociology of India

4 credits (3-1-0)

This course will begin with a discussion on the various constructions of Indian society from colonial to contemporary times. The structural and cultural dimensions of Indian society are explored at the level of village, city, region, nation and civilization. Sources of differentiation, diversity and unity are explored through institutions such as caste, class and tribe; kinship, family, marriage and gender systems, religious traditions and political organisations. Transformations in these institutions are analysed and fault lines explored by studying contemporary issues of secularism, communalism, religious conversions, caste and identity movements. The sociological perspective remains key to interpreting changes in Indian society in the era of globalization and rapid economic change.

HUL272 Introduction to the Sociology of India

4 credits (3-1-0)

This course will begin with a discussion on the various constructions of Indian society from colonial to contemporary times. The structural and cultural dimensions of Indian society are explored at the level of village, city, region, nation and civilization. Sources of differentiation, diversity and unity are explored through institutions such as caste, class and tribe; kinship, family, marriage and gender systems, religious traditions and political organisations. Transformations in these institutions are

analysed and fault lines explored by studying contemporary issues of secularism, communalism, religious conversions, caste and identity movements. The sociological perspective remains key to interpreting changes in Indian society in the era of globalization and rapid economic change.

HUL275 Environment, Development and Society

4 credits (3-1-0)

Students will be exposed to contemporary themes and debates on connection between environment, development, and society; industrialization and risk society; challenge of sustainable development; perception of the environment, dependence for livelihood, identity, and power on natural resources; social ecology; what is the role of religion in determining our world view and relation with the environment?; recognition of indigenous knowledge; rise of environmental movements, development projects and recent conflict over natural resources; understanding major environmental disasters and industrial accidents; global climate change negotiations; gender and environment.

HUL281 Technology and Governance

4 credits (3-1-0)

The course will begin with theories and concepts on the use of technologies to improve governance such as efficiency, transparency, empowerment, economic gains, decentralization etc. It will discuss the concepts of democracy and governance, corruption and accountability. Examples and case studies from topics such as information and communication technologies for development, electronic governance, electronic voting, electronic databases (UID), web portals, community radio etc. Public-private partnerships, regulation of technology by the state, surveillance, and the role of stakeholders in the policy making process.

HUL281 Technology and Governance

4 credits (3-1-0)

HUL286 Social Science Approaches to Development

4 credits (3-1-0)

Distinction between 'growth' and 'development'; historical genesis and evolution of the concept of development; theories of development and underdevelopment; the political nature of the development process. Role of state, market, culture and civil society in development. Gendered nature of development. Post-independence Indian experience (centralized planning and socialism) of development; selected comparisons with China, East Asia, South Asia, Africa, Latin America. Explaining India's slow progress in human and social development, poor record in reduction of poverty and inequality. Impact of globalization, foreign aid and economic

reform on India's development. Experiments with decentralization and sustainable development.

HUL286 Social Science Approaches to Development

4 credits (3-1-0)

Experiments with decentralization and sustainable development.

HUL289 Science, Technology and Human Development

4 credits (3-1-0)

The course will begin by identifying various dimensions of human development and mapping the state of India and the world on these indicators. It will then discuss theories about how science and technology (S&T) have shaped human development historically and the dynamics of technological change. Relationship between innovation and human development will be discussed using examples from the appropriate technology movement, health, education, nutrition, energy, environment, and others. Gender dimensions of S&T, indigenous knowledge, and radical critiques of S&T will be discussed.

HUL289 Science, Technology and Human Development

HUL310 Selected Topics in Policy Studies

3 credits (3-0-0)

The course will introduce students to selected topics in Policy Studies as decided by the instructor.

HUL310 Selected Topics in Policy Studies

3 credits (3-0-0)

The course will introduce students to selected topics in Policy Studies as decided by the instructor.

HUL311 Applied Game Theory

3 credits (3-0-0)

This module introduces students in economics and other social sciences to game theory, a theory of interactive decision making. This module provides students with the basic solution concepts for different types of non-cooperative games, including static and dynamic games under complete and incomplete information. The basic solution concepts that this module covers are Nash equilibrium, subgame perfect equilibrium, Bayesian equilibrium, and perfect Bayesian equilibrium. This module emphasizes the applications of game theory to economics, such as duopolies, bargaining, and auctions.

This course focuses on the following (tentative) topics:

1. Introduction, 2. Static Games of Complete Information, 3. Dynamic Games of Complete Information, 4. Static Games of Incomplete Information, 5. Dynamic Games of Incomplete Information.

HUL312 Distribution and Growth

3 credits (3-0-0)

Though empirical questions are central in motivating the issues on distribution, this course will mostly draw from theory. Papers published in established journals will cover the major references for this course. It will start from some empirical pattern of development (Kuznet's hypothesis), country experiences, etc. to motivate the subject. Then it will try to understand the process of distribution, growth and structural change using standard macroeconomic models. This course will be heavily dependent on Mathematics - mainly calculus.

HUL312 Distribution and Growth

3 credits (3-0-0)

HUL314 International Economics

3 credits (3-0-0)

Basic concepts of national income accounting, money, and balance of payments; output and exchange-rate determination under fixed and flexible exchange-rate regimes; fiscal and monetary policies in an open economy; international capital movements and their impacts; Case Studies: East Asian crisis, global financial crisis; theories of international trade including factor-proportions and economies of scale; the international trading regime and its implications for developing countries.

HUL314 International Economics

3 credits (3-0-0)

Basic concepts of national income accounting, money, and balance of payments; output and exchange-rate determination under fixed and flexible exchange-rate regimes; fiscal and monetary policies in an open economy; international capital movements and their impacts; Case Studies: East Asian crisis, global financial crisis; theories of international trade including factor-proportions and economies of scale; the international trading regime and its implications for developing countries.

HUL315 Econometric Methods

3 credits (3-0-0)

Basics of sample survey; variance and covariance; correlation coefficient; simple regression analysis; Gauss-Markov theorem; estimation of regression coefficients; confidence intervals and hypothesis testing in regression analysis; type-I and type-II errors; transformation of variables; multiple regression analysis; multicollinearity, heteroscedasticity, dummy variables, basics of time-series analysis.

HUL315 Econometric Methods

3 credits (3-0-0)

Basics of sample survey; variance and covariance; correlation coefficient; simple regression analysis; Gauss-Markov theorem; estimation of regression coefficients; confidence intervals and hypothesis testing in regression analysis; type-I and type-II errors; transformation of variables; multiple regression analysis; multicollinearity, heteroscedasticity, dummy variables, basics of time-series analysis.

HUL316 Indian Economic Problems and Policies

3 credits (3-0-0)

The course is aimed at developing an understanding of the economic issues in a range of economic activities in the Indian economy. The themes that can be covered include performance of the Indian Economy since 1951, agricultural growth in India, inter-regional variation in growth of output and productivity, farm price policy, recent trends in industrial growth, industrial and licensing policy, policy changes for industrial growth, economic reforms and liberalization, population growth, unemployment, food and nutrition security, and education. It will also include some contemporary issues.

HUL316 Indian Economic Problems and Policies

3 credits (3-0-0)

The themes that can be covered include performance of the Indian Economy since 1951, agricultural growth in India, inter-regional variation in growth of output and productivity, farm price policy, recent trends in industrial growth, industrial and licensing policy, policy changes for industrial growth, economic reforms and liberalization, population growth, unemployment, food and nutrition security, and education. It will also include some contemporary issues.

HUL318 Public Finance and Public Economics

3 credits (3-0-0)

The course is aimed at developing an understanding of the basics in Public Economics and Public Finance. Public economics is the study of government policy from the points of view of economic efficiency and equity. The course deals with the nature of government intervention and its implications for allocation, distribution and stabilization. Inherently, this study involves a formal analysis of government taxation and expenditures. The subject encompasses a host of topics including public goods, market failures and externalities. The course is divided into two sections, one dealing with the theory of public economics and the other with the Indian public finances.

HUL320 Selected Topics in Economics

3 credits (3-0-0)

The course will introduce students to selected topics in Economics as decided by the instructor.

HUL320 Selected Topics in Economics

3 credits (3-0-0)

The course will introduce students to selected topics in Economics as decided by the instructor.

HUL331 Modernist Fiction

3 credits (3-0-0)

The course will undertake a detailed study of some of the most iconic Modernist novels by writers such as Virginia Woolf, James Joyce, Franz Kafka and Samuel Beckett. It will examine the radical new ways in which they grappled with language, turned towards interiority, and pushed, in the process, narrative art to its very limits. The discussion will highlight the experimental quality of Modernist literature, as well as situate it within the context of its emergence - the two world wars, the development of psychoanalysis, the growth of metropolitan cities, and scientific and technological advancements.

HUL331 Modernist Fiction

3 credits (3-0-0)

Definitions:

Major Themes of Fantasy:

Archetypes and Myths

Motifs - journeys, theology, devices and aides

creation of alternate worlds

treatment of time and space

close readings of individual texts.

HUL333 Theatre of the Absurd

3 credits (3-0-0)

Socio-political background of the theatre of the Absurd, its basis in Existentialist philosophy.

The reactions against the conventions of realist theater that dominated this theatre

The pre-occupations of major playwrights with issues of language and the difficulty of communication, the isolation that human beings tend to feel from each other and themes of violence.

HUL333 Theatre of the Absurd

HUL334 From Text to Film

3 credits (3-0-0)

The course will involve a detailed study of 3-4 texts and their corresponding adaptations into film. By means of close reading, analysis, and discussion, it will seek to identify the changes that take place during the process of adapting one art-form into another and ask why those modifications occur. An evaluation of what each art-form enables and what it restricts or denies will enable a better understanding of form per se, and of these two forms in particular.

Further, the course will address the question of genre and its conventions especially with regard to film, and observe the extent to which generic expectations shape the process of adaptation of text into film.

Film screenings will be held outside class hours in the evenings.

HUL335 Indian Theatre

3 credits (3-0-0)

This course will study the various aspects of Indian theatre. The linkages between ancient theatre forms and existing forms of indigenous performance in various parts of India – such as the nautanki, the tamasha and the jatra. The energies which were generated in the urban centres through the encounter with European drama – the Parsi theatre, the nascent Marathi stage, the Hindi theatre of Bhartendu Harishchandra and the nationalist theatre of Calcutta – will be explored. Special attention would be paid to the transformation of theatre values with the intervention of the Indian People's Theatre Association (IPTA). The focus for the post-Independence period would be on the diverse energies of urban theatre, group theatre and the 'back to the roots' movement. The course would require students to study play-scripts as well as look at accompanying literature to form a concrete idea of the philosophy behind Indian theatrical practice.

HUL336 Workshop in Creative Writing

3 credits (3-0-0)

The course will begin by seeking to distinguish the notion of 'creative' writing. It will contrast this heterogeneous category with other kinds of writing such as the 'functional' writing found in text-books and reportage. Through an analysis of various techniques of writing - in master-texts as well as students' own productions - the course will explore why and how literary texts continue to be a prime source of emotional and intellectual stimulation across cultures. As far as possible, the course will focus on contemporary writing, given that writers write in the 'here and now' even as they imagine the future or return to past memories. Selected readings will be used to focus students' attention on that most difficult of problems: to acquire a style of writing that makes a writer's 'voice' both unique and universal. Finally, students will be required to write in some genre(s) of their

choice. These genres will include the classic areas of poetry, fiction and play-writing but will neither exclude non-fiction genres like the essay and biography nor forms of writing thrown up by the 'new media' such as blogs, photo-essays and narrative-writing for storyboards and video-games.

HUL338 Functions of Satire

3 credits (3-0-0)

Satire is a classical genre that has thrived over the centuries in almost all languages and cultures, and is found in a range of media. Life, in all aspects, everyday provides grist to the mill of satire, but does satire change anything? How do we define satire? Why is it considered the social genre? What are the contemporary forms of satire? Who can practice satire? It draws upon diverse techniques such as allegory, irony, caricature and laughter. Through analyses of examples, this course will familiarize students with satirical sub-genres and related literary practices, such as parody, burlesque, black humour, the grotesque, coarse humour, high and low comedy. It will examine the structure of satire, its relation with community, democracy and matters of gender, race, and religion.

The course will introduce students to selected topics in Literature as decided by the instructor.

HUL341 Meaning in Natural Language

3 credits (3-0-0)

This course examines different aspects of meaning/semantics in language. Some specific questions addressed here are: a) what is

meaning?, b) how do we use words to convey meanings?, and c) how does our grammatical knowledge interact with the interpretive system? We try to answer these and other questions while introducing students to the formal techniques used in research on the semantics of natural language.

HUL341 Meaning in Natural Language

HUL350 Selected Topics in Linguistics

3 credits (3-0-0)

The course will introduce students to selected topics in Linguistics as decided by the instructor.

HUL350 Selected Topics in Linguistics

3 credits (3-0-0)

The course will introduce students to selected topics in Linguistics as decided by the instructor.

HUL351 Philosophy of History

3 credits (3-0-0)

What kind of understanding of the past does history provide? Is it speculative or analytical? What constitutes historical evidence and how does it confine historical understanding?

Questions of objectivity are the central focus of this course: that of historians themselves—constructionist and objectivist—as they debate methodological issues and disagreements about the aim of their discipline, and that of philosophers whose interest in history springs from their attention on history's objectivist ideals and "the objectivity crisis" in history providing a philosophical rationale for reframing the two oppositions that dominate debates about the status of historical knowledge.

HUL351 Philosophy of History

HUL352 Problems in Classical Indian Philosophy

3 credits (3-0-0)

The course will begin by exploring the worldview implicit in the Vedas, the Upanisads, and the orthodox systems and then move on to the rejection of this entire system in Buddhism and Materialism. Emphasis will be led on the diversity of systems and healthy dialogue between antagonistic schools of thought. Discussions will focus on the nature of consciousness in relation to cognition of reality, theories of reality in terms of realism and anti-realism; the nature of self and no-self theory, theories of perceptual knowledge, theories of error; theories of causation and other relations, and key concepts of moral and aesthetic thought. Wherever appropriate, problems will be discussed in comparison with parallel discussions in western philosophy.

HUL353 Philosophical Themes in Biological Sciences

3 credits (3-0-0)

This course addresses various philosophical questions that arise from the recent developments in evolutionary biology, genetics, immunology, sociobiology, molecular biology and synthetic biology. How do these developments affect our ideas about life, evolution and the place of man in relation to other living beings. What is the nature of explanation in biological sciences? Does the idea of immunity demand rethinking on the nature of our embodied self? What can biological sciences tell us about healing, pain and death?.

HUL354 Art and Technology

3 credits (3-0-0)

The course begins by registering the increased presence of technology in contemporary art. We shall keep the experiences of both classical Greece and Classical India alive where art and technology were not clearly separated in the manner familiar to us. By positioning us between these two experiences - classical and contemporary we shall critically examine the complex relationship between art, science and technology which characterizes modernity. The course uses both materials from philosophical aesthetics, philosophy of science and technology. It also discusses the philosophical writings on specific areas like architecture, photography, cinema and digital art.

HUL354 Art and Technology

HUL355 Philosophy and intellectual history in India

3 credits (3-0-0)

What defines the Indian tradition? Is there a singular Indian tradition or is there a plurality of Indian traditions in the public sphere today? How do these find representation in the modern and textual frameworks? Is modernity antithetical to tradition?

The aim of this course is to take up these varied questions along with their nuances to understand and re-negotiate Indian intellectual traditions.

In this course, the examination of sources, structure, texts and

exemplars from Indian intellectual tradition provide a theoretical framework for the discussion of contemporary political and social issues. Economic development, social justice, religion and the nation, communalism and secularism, caste, class and gender equality are themes to be addressed. The political misuse of tradition in programs of reform and revival both in the past and in modern times will be highlighted to underline the need for rethinking Indian Philosophy and intellectual tradition in an academically rigorous manner.

This course will also take into cognisance the intellectual history of the ancient past as it comes through the Vedic thought and its contestations.

HUL356 Buddhism Across time and Place

3 credits (3-0-0)

Literature on Buddhism and Buddhist literature brings out the historical, philosophical and political synthesis of Buddhism in ever new cultural contexts. Interrogating and contextualizing engagements of Buddhism's classical roots in modernity will be a key concerns in this course.

HUL356 Buddhism Across time and Place

3 credits (3-0-0)

Literature on Buddhism and Buddhist literature brings out the historical, philosophical and political synthesis of Buddhism in ever new cultural contexts. Interrogating and contextualizing engagements of Buddhism's classical roots in modernity will be a key concerns in this course.

HUL357 Introduction to Philosophy of Science

3 credits (3-0-0)

Science is regarded as the most significant cognitive enterprise of the modern society. In view of this, the course addresses the question what sets science apart from other epistemic activities. Further It concentrates on debates on the nature of scientific methods, logical reconstruction of scientific explanation, the relation between theories and laws on the one hand, and empirical evidence on the other, the nature of the justification and the notion of truth involved in scientific knowledge, and the societal influence on scientific practice.

HUL357 Introduction to Philosophy of Science

Further It concentrates on debates on the nature of scientific methods, logical reconstruction of scientific explanation, the relation between theories and laws on the one hand, and empirical evidence on the other, the

nature of the justification and the notion of truth involved in scientific knowledge, and the societal influence on scientific practice.

HUL358 Philosophy of Mind

3 credits (3-0-0)

Categorical taxonomy of Mental Phenomena: Intentional and Phenomenal Theories of the Mind-Body relation: Cartesian Dualism; Behaviourism; Identity Theory or Physicalism; Functionalism

Personal Identity and the Self: The First-person Point of View

Consciousness and Content: Phenomenal Intentionality; Representationalism; Internalism and Externalism about Experience; Qualia and the Knowledge Argument

Consciousness and Self-consciousness: Pre-reflective Self-consciousness; One-level Accounts of Self-consciousness; Temporality and the Limits of Reflective Self-consciousness; Bodily Self-awareness; Social Forms of Self-awareness

Critique of the Computational Theory of Mind: Searle's Chinese Room Argument and the Frame Problem.

HUL359 Metaphysics of the self

3 credits (3-0-0)

The course is a critical study of the problem of the self taken to be a substance by some and denied to have any substantial reality by others. Focus will be given on examining the worldview from which stems the idea of a continuing self, as a subject of consciousness and agent of action. Questions about whether it is material or immaterial, real or nominal object will centre the ontological investigation into the nature of the self. Special consideration will be given to the issue of self-awareness and self-reference, and its relation to the linguistic phenomenon of the first-person pronoun 'I'.

Special consideration will be given to the issue of self-awareness and self-reference, and its relation to the linguistic phenomenon of the first-person pronoun 'I'.

HUL360 Selected Topics in Philosophy

3 credits (3-0-0)

The course will introduce students to selected topics in Philosophy as decided by the instructor.

HUL360 Selected Topics in Philosophy

3 credits (3-0-0)

The course will introduce students to selected topics in Philosophy as decided by the instructor.

HUL361 Applied Positive Psychology

3 credits (3-0-0)

Meaning and goals of applied positive psychology; Relevant research methods of the field; Introduction to intervention programmes including internet based intervention; Researches that support intervention strategies : Psychological well-being and its intervention programmes; emotional intelligence and its intervention programmes; Strategies for achieving well-Being; Mindfulness and its intervention programmes; Intervention module on stress and time management; Character strengths : their role in well being; How psychosocial resources enhance health and well being; Intervention researches in Indian socio-cultural context; Current issues and future directions in this Area.

HUL361 Applied Positive Psychology

3 credits (3-0-0)

Meaning and goals of applied positive psychology; Relevant research methods of the field; Introduction to intervention programmes including internet based intervention; Researches that support intervention strategies : Psychological well-being and its intervention programmes; emotional intelligence and its intervention programmes; Strategies for achieving well-Being; Mindfulness and its intervention programmes; Intervention module on stress and time management; Character strengths : their role in well being; How psychosocial resources enhance health and well being; Intervention researches in Indian socio-cultural context; Current issues and future directions in this Area.

HUL362 Organizational Behaviour

3 credits (3-0-0)

Introduction to organizational behaviour, Historical development of the field and some challenges in contemporary times, Learning and perceptual processes in organizations and their implications for work-life, Work related attitudes- job satisfaction, organizational commitment, organizational justice, organizational citizenship behaviour, Individual differences related to personality, emotions and abilities and functioning in organization, Group processes in organizations, Formation of groups and teams, Effective teams, Communication in organizations, Social influence processes in organizations, influencing people, power dynamics and politics and impact on organizational functioning, Theories and styles of leadership in organization and their impact on organizational functioning, Organizational ethos and culture and its impact on productivity and well-being, Various kinds of organizational structures and their effectiveness, managing organizations in times of change.

HUL362 Organizational Behaviour

3 credits (3-0-0)

Introduction to organizational behaviour, Historical development of the field and some challenges in contemporary times, Learning and perceptual processes in organizations and their implications for work-life, Work related attitudes- job satisfaction, organizational commitment, organizational justice, organizational citizenship behaviour, Individual differences related to personality, emotions and abilities and functioning in organization, Group processes in organizations, Formation of groups and teams, Effective teams, Communication in organizations, Social influence processes in organizations, influencing people, power dynamics and politics and impact on organizational functioning, Theories and styles of leadership in organization and their impact on organizational functioning, Organizational ethos and culture and its impact on productivity and well-being, Various kinds of organizational structures and their effectiveness, managing organizations in times of change.

HUL363 Community Psychology

3 credits (3-0-0)

Introduction to Community Psychology; Understanding Individuals within Environments; Individualism collectivism & community Psychology; Understanding Human Diversity; Understanding Coping in Context; Community and Social Change; Prevention and Promotion:

Key Concepts, Current and Future Applications & implementing programs; Overview of Community Interventions; Social support research in community psychology; Recent community researches in Indian socio- cultural context: Effects of various socio- cultural issues on individual and community well-being.

HUL363 Community Psychology

3 credits (3-0-0)

Introduction to Community Psychology; Understanding Individuals within Environments; Individualism collectivism & community Psychology; Understanding Human Diversity; Understanding Coping in Context; Community and Social Change; Prevention and Promotion: Key Concepts, Current and Future Applications & implementing programs; Overview of Community Interventions; Social support research in community psychology; Recent community researches in Indian socio- cultural context: Effects of various socio- cultural issues on individual and community well-being.

HUL364 Understanding the Social Being

3 credits (3-0-0)

The social being- introducing the social psychological approach, Historical roots, theories and methods. Person and social perception and social judgements. Social cognition and social thinking. The social self- cognitive, affective and behavioural aspects of self. Positive social behaviours- altruism, cooperation and volunteerism. Individuals in groups- social facilitation, loafing, conformity, compliance. Social influence, manipulation and power- bases of power. Intergroup relations- explanations and managing intergroup relations. Collective behaviour- crowds and mobs- negative and positive aspects of collective behaviour. Aggression and violence- theories and determinants. Reducing aggression and violence. Applications of social psychology- health and well-being, law and organizational contexts.

HUL364 Understanding the Social Being

3 credits (3-0-0)

The social being- introducing the social psychological approach, Historical roots, theories and methods. Person and social perception and social judgements. Social cognition and social thinking. The social self- cognitive, affective and behavioural aspects of self. Positive social behaviours- altruism, cooperation and volunteerism. Individuals in groups- social facilitation, loafing, conformity, compliance. Social influence, manipulation and power- bases of power. Intergroup relations- explanations and managing intergroup relations. Collective behaviour- crowds and mobs- negative and positive aspects of collective behaviour. Aggression and violence- theories and determinants. Reducing aggression and violence. Applications of social psychology- health and well-being, law and organizational contexts.

HUL365 Environmental Issues: Psychological Analysis

3 credits (3-0-0)

The implications of natural, built and social environment on human functioning, Making sense of environment-environmental perception and cognition, Nature of environmental attitudes and implications for inculcating pro-environmental attitudes, Various kinds of environmental stressors and human response to these stressors, Psychological analysis of climate change related issues, Psychology and energy conservation- social and collective dilemmas and individual interests, Environmental disasters and disaster preparedness, Assessing environmental risks, Place attachment, territoriality, personal space and notion of privacy and identity issues, Designing better environments and role of psychological factors in the design process, Examining specific built environments.

HUL365 Environmental Issues: Psychological Analysis

3 credits (3-0-0)

The implications of natural, built and social environment on human functioning, Making sense of environment-environmental perception and cognition, Nature of environmental attitudes and implications for inculcating pro-environmental attitudes, Various kinds of environmental stressors and human response to these stressors, Psychological analysis of climate change related issues, Psychology and energy conservation- social and collective dilemmas and individual

interests, Environmental disasters and disaster preparedness, Assessing environmental risks, Place attachment, territoriality, personal space and notion of privacy and identity issues, Designing better environments and role of psychological factors in the design process, Examining specific built environments.

HUL370 Selected Topics in Psychology

3 credits (3-0-0)

The course will introduce students to selected topics in Psychology as decided by the instructor.

HUL370 Selected Topics in Psychology

3 credits (3-0-0)

The course will introduce students to selected topics in Psychology as decided by the instructor.

HUL371 Science, Technology and Society

3 credits (3-0-0)

The course will begin with social theories on the production of technology and scientific knowledge systems, stratification within the community of technologists and scientists, discrimination (race, class, gender, caste) and the role of power in shaping the production of technology and scientific knowledge. Scientific controversies, both historical and emerging, and the organization of innovation and its geographies will be discussed. Case studies exploring ethical questions arising from new technologies such as information technology, nanotechnologies, biotechnologies, etc. will be used. Discussions on public understanding of science and role of the public and of experts in influencing policies related to science and technology will conclude the course.

HUL371 Science, Technology and Society

3 credits (3-0-0)

Discussions on public understanding of science and role of the public and of experts in influencing policies related to science and technology will conclude the course.

HUL372 Agrarian India: Past and Present

3 credits (3-0-0)

The course will use interdisciplinary texts to give students a historical overview of agrarian India starting from the colonial period, plantation and export economies, recurring famines, community development programs and land reforms after independence, the green revolution, and the neglect of rainfed / dryland regions. It will explore various dimensions of development in agriculture including the advent of the agricultural sciences and the birth of the agricultural extension system. The myth of the ignorant farmer and the self-sufficient village will be discussed. Case studies on the historical roots of globalization and agricultural commodity chains related to new technologies, and the linkages between the market and the state in contemporary agriculture will be discussed. The growing social and geographical disparity with ecological distress and the threat of climate change, farmer suicides, and debt spirals on the one hand, and a risky but rewarding cash crop economy on the other, will also be explored. Finally the course will discuss aspirations of rural youth, opportunities for livelihoods, and gender and caste dimensions of the growing urbanization of rural centres.

HUL375 The Sociology of Religion

3 credits (3-0-0)

This course will introduce students to sociological approaches to the study of religion in contemporary society. Religion will be understood in terms of its social and cultural structure; in addition the course will also encourage a critical perspective on religion and society – its interface with society, polity and the economy. Religious conflict and change, syncretism, popular religion, revivalism and fundamentalism will also be considered.

HUL375 The Sociology of Religion

3 credits (3-0-0)

This course will introduce students to sociological approaches to the study of religion in contemporary society. Religion will be understood in terms of its social and cultural structure; in addition the course will also encourage a critical perspective on religion and society – its interface with society, polity and the economy. Religious conflict and change, syncretism, popular religion, revivalism and fundamentalism will also be considered.

HUL376 Political Ecology of Water

3 credits (3-0-0)

This course is an advanced undergraduate sociology course on the political ecology of water. It discusses people's historic and current engagement with water, sustainable development and water, the recent controversies and emergent resource conflict over water in the context of industrial development, design and implementation of hydropower projects, water pollution management, and conservation strategies (modern and traditional) and relates them to relevant national policies.

HUL376 Political Ecology of Water

3 credits (3-0-0)

This course is an advanced undergraduate sociology course on the political ecology of water. It discusses people's historic and current engagement with water, sustainable development and water, the recent controversies and emergent resource conflict over water in the context of industrial development, design and implementation of hydropower projects, water pollution management, and conservation strategies (modern and traditional) and relates them to relevant national policies.

HUL377 Gender, Technology and Society

3 credits (3-0-0)

The manner in which gender is conceptualized and performed is foundational to the understanding of human social relationships. Gender identities are not fixed or determined purely by physiology; their social construction affects ideas of masculinity and femininity or other sexual identities. Besides understanding how sex and gender are interrelated, we will look at how gender intertwines with societal areas of economy, technology, polity, religion and demography. The important role played by social structures and institutions such as caste, kinship, family, marriage, ethnicity, religion and class in structuring gender and vice-versa will be brought out.

Technologies associated with population and biological sciences have transformed and are continuing to transform society and human relationships in particular directions. The course will examine these

transformations at the global and local levels and consider their impact on individual lives. Challenges posed to intimate human relationships and identities by new reproductive technologies such as invitro-fertilization, surrogacy, sex selection will be explored. What does the emergence/ institutionalization of new social forms - such as same sex marriages and parenthood by surrogacy - tell us about the possibilities and limits of human relationships?

HUL378 Industry and Work Culture under Globalization

3 credits (3-0-0)

Globalization and Globality; Classical theories to understanding work and industry; Understanding Work, Work Ethic and Work Culture; Post-industrial society and rise of informational economy; Job-satisfaction and alienation; Equalization of Opportunities and the Flattening of the World; Outsourcing as a Business Strategy; Important changes in industry and rise of IT sector and BPO industry; Governance and Collective Organization of Workers in select sectors; Corporate Social Responsibility.

HUL378 Industry and Work Culture under Globalization

3 credits (3-0-0)

Globalization and Globality; Classical theories to understanding work and industry; Understanding Work, Work Ethic and Work Culture; Post-industrial society and rise of informational economy; Job-satisfaction and alienation; Equalization of Opportunities and the Flattening of the World; Outsourcing as a Business Strategy; Important changes in industry and rise of IT sector and BPO industry; Governance and Collective Organization of Workers in select sectors; Corporate Social Responsibility.

HUL380 Selected Topics in Sociology

3 credits (3-0-0)

The course will introduce students to selected topics in Sociology as decided by the instructor.

HUL380 Selected Topics in Sociology

3 credits (3-0-0)

The course will introduce students to selected topics in Sociology as decided by the instructor.

HUL381 Mind, Machines and Language

3 credits (3-0-0)

Exploratory in nature, the course seeks to debate questions such as: What are the implications of conceiving the mind as a 'machine'? Can evolutionary theories about language and tool-using help us understand how we continually manage today to process the world around us 'online'? On this course, the class will be introduced to some state-of-the-art discussions in the interdisciplinary field of cognitive

studies. These topics will include: i) the modularity of mind ii) the content of consciousness, iii) the language bio-programme hypothesis, iv) the relativism versus universals of controversy; v) strong and weak positions on AI, etc.. The course will rely on down-to-earth examples to demonstrate that such an interconnected area of study is not remote or esoteric but part of the intellectual excitement of living in the new millennium and attempting to anticipate both how it will shape us and how we will shape it.

HUL382 Romanticism in Philosophy, Politics and Aesthetics

3 credits (3-0-0)

There is more to romanticism than Wordsworth's poetry, or even literature in general. Nor is it confined between 1780s and 1830s. Least is it a trend succeeded by Victorianism and realism, and assailed by modernism. Romanticism contends with the question of presentation – of representation of and to oneself. It therefore directly participates in the philosophical discussions of reason, sensibility, emotion, subjectivity, and most importantly the idea of human freedom. This course will familiarize students with romantic movements in arts, in theories of language and society, in post-Kantian philosophy, in attitudes to religion. Romantics not only engaged in experimental social practices and literary collaborations, but also articulated their necessity for the first time. Can we say that romanticism is at an end? How does it contribute to both a nationalism rooted in folk tradition, and individualism expressed in the cult of the hero, the solitary intellectual? How does it both look back to medieval occult and forward to novelties of science? Why is romanticism fascinated with animals, monsters and machines alike?

HUL382 Romanticism in Philosophy, Politics and Aesthetics

HUL701 Sociological Theory Developments and Trends

3 credits (2-1-0)

Classical Theories Positivism, evolutionism and Marxism, structuralism

and functionalism in sociology and social anthropology. Exchange theory. Symbolic interactionism, conflict theory, neo-Marxism; post-modernism. The purpose of the course is two-fold : first, to introduce the student to the field of social theories; and second, to present him with some perspectives whereby he may develop a better understanding of both his social environment and theoretical understanding.

HUL702 Media, Culture & Society

3 credits (3-0-0)

Pre-requisites: For HSS PG Students: No pre-requisites others

This course will focus on a critical sociological understanding of media. Media technologies (both 'traditional' and 'new' media) will be situated in terms of the relationship with social relations, cultural processes and technological developments.

Some of the key questions addressed by the course will include: How do media representations aid in consolidation of social identities such as caste, gender, religion, region or nation? How do media produce and shape social and political moralities? What is the relationship between media and censorship; of limits to the freedom of speech? Through a range of case studies from India and outside, the course will attempt at a critical theoretical engagement with mass media production, representation and reception.

HUL703 Agrarian Societies And Rural Development

3 credits (3-0-0)

Pre-requisites: For UG Students: Any one course from HUL271, HUL272, HUL275, HUL281, HUL286, HUL371, HUL372, HUL375, HUL376, HUL377, HUL378 or HUL380 or any new 200 or 300 level Sociology course floated in future.

For PG Students: None

The course will introduce students to theories related to agriculture and development including modernization theory, the rational peasant, moral economy, the agrarian question, modes of production debates, peasantry as a class etc. Readings from the history of agriculture in various countries including the United States, Asia, Africa and India will be taught in comparative perspective. The course will help students understand the economic, social, cultural, ecological, political dimensions to the agrarian question, especially in the light of urbanization and globalization over the last 150 years.

HUL706 Language, Society and Culture

3 credits (2-1-0)

Psycho-linguistics and sociolinguistics; culture and identity studies; studies in expressive culture: idea-systems, myths and archetypes.

HUL707 Social Psychology

3 credits (2-1-0)

Schools of social psychology with special reference to personality and social structure. The problems and methods of social psychology. The association motive. Interpersonal attraction. Learning in social context. Social motives and attitudes. Social influence. Dissonance. Consonance and balance. Social status: Its effect on social motives and behaviour, social roles. Personality and social phenomenon. Cultural influences on personality and social behaviour. Social perception communication. Group process. Group task performance : Problem solving co-operation and competition. Leaders and leadership. Power and politics in organisations. Psychological processes in organizations. Aggression and its management.

HUL709 Social Research Methods

3 credits (2-1-0)

Scientific approach to social research. Concepts and indices. Analytical and formal aspects. Hypothesis formulation and testing strategies. Design of applied empirical research. Measurement and interpretation of social data. Social statistics. Sampling designs, report writing.

HUL710 Personality Structure and Dynamics

3 credits (2-1-0)

The topics for discussion will be : Coping with stress. Model of success and failure in adjustment. Approaches to the study of personality.

Freud's classical psychoanalytic theory, Jung's analytic theory, Adler's individual psychology, Roger's person-centred approach. Lwin's field theory, Skinner's operant reinforcement theory. Erikson's theory : Psychohistorian perspective of man. Models of healthy personality; mature person: Allport's model. Self-actualising person : Maslow's model. Here-and-now person : Perl's model. Roger's theory : on becoming a person.

HUL711 Psychological Testing & Behavioral Assessment

3 credits (2-1-0)

The concept of Behavioral Assessment: Uses and Varieties of Psychological Tests, Why Control the use of Psychological Tests? Test Administration, Examiner and Situational Variables and Effects of Training on Test Performance.

Technical and Methodological Principles: Test Construction, Norms and The Meaning of Test Scores, Reliability and its Types, Validity and its Basic Concepts and Item Analysis.

Other Techniques of Behavioral Assessment: Interview, Questionnaire and Schedule, Content Analysis, Observation as a tool of data collection, Rating Scales, Survey and Projective Techniques. Brief Review of some Selected Psychological Tests and Concluding Comments.

Ethical and Social Considerations in Testing: Ethical Issues in Behavioral Assessment. User Qualifications and Professional Competence, Responsibility of Test Publishers, Protection of Privacy, Confidentiality and Communicating Test Results.

HUL714 Inclusive Innovation: Theory and Practice

4 credits (2-0-4)

Pre-requisites: 70 Credits

The Course will familiarize students with key concepts in innovation, including various elements of the innovation cycle going all the way from need identification to deployment. Key aspects relating to inclusive innovation – the public goods nature of many basic needs, user and market characteristics, delivery and scaling-up considerations, and the role of partnerships and policies – will receive particular focus. The students will also be introduced to the state-of-the-art thinking in organizing for innovation, especially for bottom of the pyramid. This theoretical knowledge will be complemented with hands-on exercises aimed to familiarize students with some of the key issues in coming up with technologies and products for marginalized, including user needs and context analysis, ideation involving user interaction and co-creation and assessment of potential of technology for success.

HUP722 Seminar (Case Material-based) Minor Project

3 credits (0-0-6)

(In lieu of any one of the courses.)

HUL731 Perspectives on Development in India

3 credits (3-0-0)

Pre-requisites: For UG Students: One course out of (HUL212, HUL213, HUL311, HUL312, HUL314, HUL315, HUL316, HUL318, HUL320 any new 200 or 300 level Economics course floated in future) AND one course out of (HUL271, HUL272, HUL273, HUL275, HUL281, HUL286, HUL371, HUL372, HUL375, HUL376, HUL377, HUL378 or HUL380 or any new 200 or 300 level Sociology course floated in future)

For PG Students: None

This seminar course will undertake a critical examination of the development process in India. The course introduces students to a historical overview of social, economic and political issues related to the ideas of development and growth. Starting from notions of improvement mooted under the colonial regime, to the processes of planning in independent India, the radical new agrarian policy of the 1960s and 70s, down to the era of liberalization in the 1990s and beyond, the course familiarises students with the political economy of development in India. It uses inter-disciplinary sources and texts to expose students to multiple ways of understanding and analyzing problems. Other topics covered include poverty and inequality, economics of discrimination (gender and caste) and the conflicts over

land and natural resources in the 21st century.

HUL736 Planning and Economic Development

3 credits (0-0-6)

Economic growth. Economic development. Historic growth and contemporary development. Lessons and controversies. Characteristics of developing countries. Obstacles to development. Structural changes in the process of economic development. Relationship between agriculture and industry. Strategies of economic development. Balanced/ Unbalanced growth. International trade and economic development. Population. Planning for economic development. Use of input-output model and linear programming techniques in planning. Indian plan experience. Strategy of Indian planning. Indian plan models.

HUL738 International Economics

3 credits (2-1-0)

The theory of International Trade. Impact of dynamic factors in International Trade. Free Trade, Protection. Economic integration and developing countries. The balance of payments. International capital movements. Rate of exchange. Relationship between Trade, Foreign Aid and Economic Development. Role of multinational corporations in developing countries. The IMF and the International Monetary System. Trade problems of developing countries. The new International Economic order. The structure and trends of India's foreign trade. India's balance of payments. India's trade policy. Indian and international financial institutions.

HUL745 Psychological Factors in Work Design

3 credits (2-1-0)

Approaches to work design. Historical perspective. Human information processing, Natural and man-made environment effect, psychology of work. The living environments, physical features, psychological dimensions of work. Job enrichment, quality of working life. Future of work designs.

HUL748 Community Psychology

3 credits (2-1-0)

Concept of community and their implications for community psychology. Community processes and orientations toward change. Examinations of the models; the mental health model; the organizational model; the social action model; the ecological model. Implications for a psychology of the community : the study of community life, interaction strategies; implications for manpower and training; family therapy and the community; crisis intervention; advocacy and community psychology.

HUL754 Science, Technology and Society

3 credits (2-1-0)

An interdisciplinary exploration of the mutual interaction of science, technology and society, with insights drawn from sociology of sciences, history of science and technology, and the changing formations of the modern society.

HUL755 Econometrics and Economic Forecasting

3 credits (2-1-0)

Nature of econometrics, specification of econometric model. Least-squares estimators. Properties of the least-squares estimators. Statistical inference in regression model. Dummy variables. Multi-collinearity. Specification error. Maximum likelihood estimators. Generalized least squares. Heteroscedasticity. Auto-correlation. Pooling of time-series and cross-section data. Distributed lags. Simultaneous-equation system. Identification problem. Procedures for estimating a single equation in a systems of equations. Estimation of equation systems. Forecasting. Moving average models. Autoregressive models. Simulation models.

HUL759 Urban Social Systems

3 credits (2-1-0)

This course intends to impart a comprehensive and systematic understanding of urban social systems. Students completing this course will have a detailed knowledge of urban-growth and urban

behaviour analysis, and urban- planning through a feedback analysis approach. Following will be the main course contents:

Nature, types and growth of cities, Some important aspects of urban-systems: migration; neighbourhood; social groups; and voluntary associations. Trend of urbanisation. Urban influences on rural areas. A profile of urban India and its problems. Solution of the problems through various approaches. Urban planning.

HUL760 Industry and Society

3 credits (2-1-0)

The basic aim of this course is to introduce students from various backgrounds scientists, technologists to the study and understanding of modern industrial societies. the course material will focus on the following topics.

Nature and type of industrial society. Workers in modern industrial societies: the work situation; alienation; and embourgeoisement. White collar worker. Trade-unionisation. Industrial democracy. Labour-management relations in Indian industries.

HUL761 Sociology of India

3 credits (2-1-0)

Approaches and Concepts: Institutions, Caste and Kinship; Religion; Marriage and Family. Agrarian social structure : Land reforms; Dimensions of social change; Sanskritisation and modernization. A profile of modern India.

HUL762 Industrial Economics

3 credits (2-1-0)

Basic concepts : Plants, firm and industry. Market structure. Economics of scale and optimum firm size. Pricing under alternative market structures. Market power and concentration. Integration, diversification and merger. Behavioural and managerial theories of the firm, growth of the firm. Industrial productivity and its measurement. Industrial location. Input-output analysis. Project appraisal and capital budgeting. Industrialisation and economic development. Problems of industrialisation in India. Role of public and private sectors. Growth of small-scale industries and their problems. Government regulation of industry. Balanced regional development.

HUL766 Visual Methods in Social Research

3 credits (2-0-2)

HUL810 Communication Skills

3 credits (3-0-0) (Audit)

Introduction to major grammatical models. Phonological and syntactical structure of present-day English. Language of science and technology. Aspects of style. Some common errors.

Technical presentations design and delivery.

Audio Visuals in communication.

Collecting materials for research.

Organization of research paper/dissertation.

HUL812 Grammar and Rhetoric

3 credits (3-0-0)

Two complementary aspects of studies in linguistics and literary theory are brought together in this course; grammatical paradigms for the study of sentential and supra-sentential structures, including those of narrative and argument; theories of rhetoric; persuasion, use and meaning; rhetorical functions such as those performed by tropes like metaphor, irony, simile, metonymy, etc. debates on the universal psychological as well empirical standing of such figurative language; its place in the lexicon etc. The course will be useful to those students of literature who require some knowledge of technicalities of grammar and to those students of linguistics who feel that the analysis of language extends beyond the study of sentence 'structure' to social 'meaning'.

HUL823 Contemporary Critical Theory

3 credits (2-1-0)

Recent developments in linguistics, philosophy and the social sciences; interdisciplinary cross-talk in these areas, concerning the status of

canonical literary as well as marginal texts; feminist, post-modernist, post-colonial, subaltern, orientalist, new historicist, liberal Marxist and critical practice. The aim of the course is to familiarise students with some of the vocabulary of theoretical inquiry today, so that they are enabled in their own research to question the verities which their disciplines seem to offer.

HUL840 Philosophy of Social Sciences

3 credits (3-0-0)

Some of the key issues which arise in social sciences will be discussed in this course. These are : (1) What is 'out there' in the social universe ? (2) What are the most fundamental properties of the social world? (3) What kind(s) of analysis of these properties is (are) possible and/or appropriate ? (4) What are the natures of theory, law, and explanation ? (5) Problems of reductionism. (6) Problems of free will versus determinism, purposeful behaviour, interpretations of actions. (7) Philosophical issues specific to various social sciences, e.g., philosophical bases of various economic theories, or of theories of psychology, or issues regarding the assumptions concerning human nature made by various social science disciplines.

HUL841 Philosophy of Science

3 credits (3-0-0)

The major issues to be discussed in this course include : (a) scientific explanation; (b) theories of confirmation of a scientific hypothesis; (c) theoretical-observational terms/distinction; (d) problem of induction; and (e) the problems of theory choice. A survey of the historical development of the twentieth-century philosophy of science will be provided. Some historical episodes in science will be employed to gain a better understanding of the issues to be discussed.

HUL843 The Philosophy of Language

3 credits (3-0-0)

The twentieth century is one which has been said to mark a 'linguistic turn' in philosophy. This course will examine the basic sense/reference, truth/falsity, denotative/ connotative, meaning/use, analytic/synthetic, argument/predicate, intension/extension dichotomies as they are explored in post-Fregean analytic philosophy.

Five or six distinct strains of philosophical opinion are salient for this course. They are (A) the logical positivism associated, with Ayer et. al. (B) Wittgenstein's 'picture' and 'game' theories of meaning; (C) the speech-act theory of Austin and Searle; (D) the Gricean maxims of conversational cooperation and non-natural meaning; (E) the 'pragmatism' of Quine on webs of meaning, Davidson on truth and interpretation and Rorty on philosophy as conversation and social conduct; (F) the writings of continental 'non-analytic' philosophers such as Derrida and Habermas who hold opposed positions on the nature of language. The views of Kripke, Dummett and Dennett among philosophers and Chomsky, Katz and Fodor among linguists will also be discussed.

The course may have a seminar format in which particular topics are considered in depth and short papers are prepared by students.

HUL845 Environmental Ethics

3 credits (3-0-0)

Objectives: To acquaint the student with (a) philosophical concepts underlying thinking about the environmental crisis and (b) the models of human-nature relationship found in some of the classical philosophical systems of India.

Contents: (a) What is 'environment'? (b) Conceptual basis for the split between 'nature' and 'culture' (c) Philosophical theories about the environment: Utilitarianism: Deep Ecology: Ecofeminism. (d) Non-humans as recipients of moral consideration (e) Environment and Gender (f) Environment and Development (g) The Third World perspective (h) Revisioning Ethics, Metaphysics and Epistemology in the light of the above debates.

HUL846 Philosophy and Film

3 credits (3-0-0)

Nature of cinematic representation: Illusion, image, reality. Perception of image: Analytical, cognitive and phenomenological theories,

Interpretation of film: meaning, authorship, Intention, Image and emotional response.

Film Theories: Classical theories: Eisenstein, Arnheim, Bazin, Pudovkin, Contemporary theories: Semiotics, Psychoanalysis, Marxism, Post-structuralism, Feminism, Auteur theory.

Aesthetics of Film: Cinema as art, entertainment and technology, Cinema's relationship with literature and other arts, Cinema and Digital Art, Aesthetics of interactive cinema, Aesthetics of special effects.

HUL873 Sociology of Science

3 credits (3-0-0)

The relationship between the sub-culture of science and the wider culture of knowledge which surrounds it. The nature of scientific knowledge and the general characteristics of scientific research which make such knowledge possible. Whether present framework of organizing knowledge is itself an object of sociological investigation? Comparison of methods of acquiring and of validating knowledge claims across cultures. Investigation through case studies of the various cognitive frameworks. Transfer of scientific and other expertise to wider sub-culture. Nature of scientific community, and of communication within a community and inter-community through networking.

HUL881 Elements of the Narrative Art

3 credits (3-0-0)

It is a course more broad-based than the theory of fiction. The following topics will be studied : Narrative theory and types of narrative; point of view; plot; characterization; setting; time and place the language of narrative; figures of speech.

HUL882 The European Renaissance, Selfhood and Survival

3 credits (3-0-0)

This course will cover drama, prose, and poetry from one of the richest periods of European Literature : the Renaissance. It will relate the production of a work of art to Renaissance history and cultural politics. Tests by Pico, More, Machiavelli, Sidney, Spenser and Shakespeare and others will be examined from the point-of-view of selfhood and survival.

HUL883 Critical Theory: Plato to Derrida

3 credits (3-0-0)

This course will explore western critical theory from antiquity to the present and measure its efficacy when applied to a literary text. Ideas of mimesis, fiction truth, art and society, art and gender will be studied with regard to different "schools" of critical theory: Platonic, Aristotelian, Renaissance, Romantic, Formalist, Structuralist, Poststructuralist, Deconstructionist and Feminist. Since the material is vast, only three or four topics will be studied in a semester.

HUL884 Indian Writing in English

3 credits (3-0-0)

The course focuses on the dominant themes like India's struggle for freedom, partition and communal harmony/ discord, Issues of pluralism and the related problems as reflected in Indian Writing in English. It also aims at a close study of problems of modernization, diaspora and India's quest for identity, Rushdie and Post Rushdie. The students should be prepared to do intense study of the texts and wherever possible a comparative study of the literary representations with the visual and electronic media will also be undertaken. All the genres of literature will be made part of the study.

HUL885 American Fiction I

3 credits (3-0-0)

It is primarily a survey course covering American fiction before World War I. Its aim is to acquaint students with some of the major novelists of the period. Selected texts of some of the following will be studied Hawthorne, Melville, Poe, Drieser, Edith Wherton, Willa Cather, Henry James, Ellen Glasgow.

HUL886 American Fiction II

3 credits (3-0-0)

This is a survey course covering American fiction of the post- World War-I period. Some of the major novelists of the period will be studied, including Hemingway, Scott Fitzgerald, Steinbeck, Richard Wright, Ralph Ellison, Saul Bellow, Bernard Malamud, John Barth, John Updike.

HUV886 Special Module in Cognitive Psychology

2 credits (1-0-2)

The course will focus on current relevant and emerging issues, and experiments in the field of cognitive psychology.

HUV887 Special Module on Econometric Tools

1 credits (1-0-0)

Pre-requisites: HUL or SML 700/800 category courses

Estimation and inference in two variable model; OLS assumption; Extension of the two variable model; OLS assumption : autocorrelation, multicollinearity, and heteroskedasticity, models with limited dependent variables : LPM, logit, and probit; Panel data modelling : fixed effect and random effect models; Time series analysis: introduction to non-stationarity, AR and MA modelling.

HUL888 Applied Linguistics

3 credits (3-0-0)

Notions of applied linguistics; psycholinguistics; socio- linguistics; language learning; language teaching; contrastive analysis; error analysis; pedagogic grammars; applied lexicology; communicative teaching; discourse analysis; stylistic and literature.

HUL889 British Fiction – A Stylistics Approach

3 credits (3-0-0)

Language in prose and poetry; stylistics; deviance; prominence, foregrounding; literary relevance; stylistic variants; language and the fictional world; the rhetoric of text; discourse situation; conversation, speech and thought.

HUL891 Globalization and Transnationalism

3 credits (2-1-0)

Globalization & Globalism, Nationalism & Transnationalism, Dicopora, Glocality. Globalisation and Transnational movements of people, ideas & technology, culture, capital and goods. Relationship between locality, national boundaries and transnationalism- personal and collective identity. Transnational migration and global politics of gender and work in a global world- Dicopora. Religion and Ethnicity in a global world. The State and Democracy in a globalised world.

HUL893 Literature and the City

3 credits (3-0-0)

The course examines in some detail the nature of the challenge that traditionally preoccupied European writers - how to map the experience of the modern city, and what representational strategies were adequate for capturing the opacity, the fragmentation, and the transitory nature of urban modernity. It goes on to investigate the contemporary postcolonial city in order to understand it in relation to late capitalism, globalization, migration, and postmodern culture, and the challenges these pose to classic modernity. It begins by providing an introduction to some of the most important literature on the city and the major theoretical debates around it, offering students a set of conceptual tools with which to approach the city's incommensurable realities, its problems and its potential. It moves on to a detailed analysis of a number of literary texts, examining some of the ways in which the disjunctive realities of city-life shape new modes of experience, creative expression, and solidarity, without losing sight of the inequities of gender, culture, class, and race that persist and indeed strengthen in the current global economic system.

Department of Management Studies

MSL301 Organization & People Management

3 credits (3-0-0)

Lectures on multidisciplinary perspective on organizations, Organizational structure & Design, Organizational stakeholder Ethics, Organizational Culture, Organizational Environment, Strategy and Structure, Technology and organizational structures, Lifecycle of an organization will be supported with case studies & exercises.

MSL302 Managerial Accounting & Financial Management

3 credits (3-0-0)

On completion of this course the student will be able to: Understand accounting for managerial decisions. Assess financial health of a corporate firm. Design profit planning. Understand cost concepts and financial decision making.

MSL303 Marketing Management

3 credits (3-0-0)

Marketing concept, Environment of Marketing, Marketing Strategy, Marketing Ethics, Marketing Planning, Concept of Product life cycle, Pricing, Advertising and Promotion Strategies, Concept of Unique selling proposition, Product and Brand Management, Marketing Research Methodologies, Case study discussions.

MSL304 Managing Operations

3 credits (3-0-0)

The objective of the course is to provide the students about the application of Industrial management in various functional areas of business especially industrial operations such as linear programming, assignment and transportation problem, layout/location design, quality, materials management, Preventive maintenance, project management, supply chain management, scheduling/sequencing, ergonomics, operations strategy. The entire course is a case based where the participants will be given a case. Participants will be asked to tackle the case problem without using linear programming techniques.

MSL700 Fundamentals of Management of Technology

3 credits (3-0-0)

Module I: Understanding technology: definition, Key concepts, role, importance, need. History of technological developments, Today's challenges. Issues of concern in Management of New Technology. Technology-Management integration, Life cycle approach to technology management. Technology innovation process. Managing and fostering the Innovation.

Module II: Technology forecasting and assessment. Technology flow and diffusion. Evaluating technology, technology planning and strategy, Strategic potential of new technology. Factors promoting technology acquisition. Flexibility in Technology Management. Technology transfer and absorption, Modes of global technology transfer. Technological Entrepreneurship.

Module III: Technology implementation. Integrating people and technology, human factors in technology operations. Organisation structure and technology. Investing for technological maintenance and growth. Concern of phasing out and upgradation. Market factors in technology operations, Science and Technology Policy, Technology support systems. Information networking for technological updatedness.

MSL701 Strategic Technology Management

3 credits (2-0-2)

Module I: Emerging technology-strategy relationship in the large corporation from the perspective of individual firm, and entire industry. Global technology comparison, technological change, sources of technology, Technology Information. Criticality of technology for growth, core competencies, R&D productivity, Resource Leverage. World Class Organisation.

Module II: Corporate technology strategy, Generic competitive technology strategies. Corporate R&D, Strategic technology management process, relationship between technology strategy and corporate strategy. Strategic shifts and resource commitments,

technology vision and goals, technology leadership. SWOT analysis for technology, Matching Business Portfolio and Technology Portfolio, Technology- Market matrix. Innovation and entry strategy, Flexibility in Technology strategy.

Module III: Business/technology alliances and networks. Technology forecasting and assessment. Technology strategy at business level. Strategic Technology Planning, Investment in Technology, Technology Strategy and functional strategy. Implementation and Control of technology strategy, Managing Corporate culture, structure, and interdepartmental linkages.

MSL702 Management of Innovation and R&D

3 credits (3-0-0)

Module I: Technological innovation systems and processes. Understanding the process of technological innovation and the factors affecting successful innovation. Management problems from the product/service concept-stage to end-product/service marketing. Creativity and Innovation- Creativity process, Individual and group creativity, Critical functions in the innovation process, Evolving innovative culture, teams for innovation.

Module II: Product and technology life cycle, Management of R&D planning, organising, staffing, scheduling, Controlling, budgeting, Selection of R&D projects. Methodologies for evaluating the effectiveness of R&D, Research Productivity. Protection of Intellectual Property Rights. Evolving flexible organisation.

Module III: Issues relating to managing scientists and technologists as individual, in teams, and in large organisations. Human Resource Management in R&D and Innovation, training, motivation, communication, group dynamics. Information management for innovation and R&D- strategies, sources, channels, and flows. Standardisation and Quality management.

MSL703 Management of Technology Transfer and Absorption

3 credits (2-0-2)

Module I: Transfer of technology from R&D to field and at international level. Commercialization of new technology and new venture management, prototyping, test marketing, pilot plant, project viability, Technology push and market pull. Quality management, customer education and awareness. Assessment, justification and financing of new technology, source of funds, venture capital financing. New venture products and services.

Module II: Global transfer of technology, Technology transfer models: Active, passive. Multi channel approach: from hardware technical services acquisitions to strategic partnering and networking arrangements. Sourcing technology, technology negotiation, licensing agreement. Fee for technology transfer, royalty, equity participation. Modes: technological collaboration, joint venture, alliance, acquisition. International S&T cooperation: institutional framework, multilateral/ bilateral cooperation, pre-emptive R&D cooperation.

Module III: Absorbent Strategy: Japanese technology absorption, Technology Absorption: product and process technologies, Reverse engineering. Appropriate technology. Vendor development. Adaptation and assimilation of technology.

MSL704 Science & Technology Policy Systems

3 credits (3-0-0)

Module I: Role of S&T in economic development, Modern analysis of growth and structural change, international economic relations, liberalisation, globalisation/ regionalisation, industrial/technological partnerships, S&T in Indian Economic Policy. Government policy and its impacts on technology development. Living with the new technology, social issues. International trends, Technology policy in USA, Japan, European Commission, and other select countries.

Module II: National technology Policies, Regulatory Policies: Industries Development and Regulation Act, MRTP, FERA, Intellectual Property Rights, Patents act, Environment Protection Act, R&D Cess Rules, Import Export Policy; Development Policies: Industrial Policy

Resolution, Scientific Policy Resolution, Technology Policy Statement, New Technology Policy, Policy on Foreign Investments and Technology Imports. Role of UN and other International Agencies.

Module III: Support Systems: Technology infrastructure, technology parks, Technology development and utilization schemes by government and Financial Institutions, Venture capital financing, TIFAC, Technology mission, Standards, Support to Small scale sectors. Research laboratories, and institutions. S&T in five year plans, Fiscal incentives. Organization set up for Science and Technology. R&D in corporate sector.

MSL705 HRM Systems

1.5 credits (1.5-0-0)

This course focuses on various functions of human resource management. The course begins with the context and evolution of HR, followed by functions of HR via cases and various exercises. Manpower planning, job design, recruitment & selection, training & development, performance appraisal & management, compensation & reward management and career management, legal issues in HRM are the topics covered.

MSL706 Business Laws

3 credits (2-0-2)

MSL707 Management Accounting

3 credits (3-0-0)

On completion of this course the student will be able to: Understand accounting principles governing preparation of financial statements. Assess financial health of a corporate firm. Design profit planning. Understand cost control systems. Understand techniques of pricing, product and capital budgeting decisions.

MSL708 Financial Management

3 credits (3-0-0)

MSL709 Business Research Methods

1.5 credits (1.5-0-0)

Introduction to Business Research Methods; Theoretical approaches; Problem definition; Research Design; Questionnaires & Scales; Sampling - Probability, size and challenges; Survey & Observation, Experiments; Qualitative Research, Secondary Data; Data Preparation & Analysis, Report Writing.

MSL710 Creative Problem Solving

3 credits (3-0-0)

Module I: Structure of managerial problems. Open and close ended problems, convergent and divergent thinking. The creativity process, Individual and group creativity, Idea generation methods: Brain storming, Nominal Group Technique, Idea Engineering, Check list, Attribute listing, Morphological analysis, Syntectics, Mental Imaging, Critical Questioning. Total System Intervention, Flexible Systems Methodology.

Module II: Idea Structuring: Graphic tools, Programme Planning Linkages, Interpretive Structural Modelling, Relationship Analysis, Flexible Systems Management, SAP-LAP Analysis, Flexibility Influence Diagrams, Collaboration Digrams. Scenario Building: Harva method, Structural Analysis, Options Field/Profile Methodology.

Module III: Viable Systems Modelling. Fuzzy sets in multicriteria decision making, Analytic Hierarchy Process, Intelligent Management Systems, Creativity applications in TQM and Business Process Reengineering.

MSL711 Strategic Management

3 credits (3-0-0)

Understanding new perspectives on strategic management, Content and process of strategic management, Formulation and implementation of strategies, Developing cross-functional trade-off decision making skills, and Help appreciate new themes in strategic management. This course will require reading books, articles, case studies and

literature from the field of Strategic Management. The sessions would be interactive where attempt will be made to understand the theories and concepts through discussion of the readings and their application in cases. Student will be required to prepare and effectively participate in class and make impromptu or scheduled presentations of issues and learnings. Besides the readings, groups of students will have to work on a comprehensive research project to investigate and validate some of the key learnings.

MSL712 Ethics & Value Based Leadership

1.5 credits (1.5-0-0)

Ethics & Business, Ethical principles in business, Business and Its External Exchanges: Ecology & Consumers, Business & Its Internal Constituencies.

MSL713 Information Systems Management

3 credits (2-0-2)

This course may expose the participants to the following topics: Information Systems and its impact in Organization and People, Information Technologies: concepts, types and usage, Information Systems, Organizations and Strategy, Economics of Information Systems, Foundations of E-Business, Foundations of Data management, Foundations of Business Analytics, Networks and Collaboration as Business Solutions, Information Security & Risk Management, Building and Managing Systems, Enterprise Systems, etc. Hands on training would also be provided, using specific tools.

MSL714 Organizational Dynamics and Environment

3 credits (3-0-0)

Module I : Organisational systems vix. a vis., the environment. The dialectics of agency and structure- extent of environmental and organizational control. External control of organization. Organizations and the new institutionalism. Systems for managing chaos and conflict.

Module II : Constituent systems for organizational functioning- planning, learning, organising, communication and control systems. Organizational systems and mechanisms related to technology. Systems for managing strategy, and structure related to new technology.

Module III : Systems for managing continuous and radical change for organizational renewal and transformation. Adaptiveness and flexibility in organisational systems. Systems for managing collective action within the organization. Feminism and organizational systems for managing gender diversity.

MSL715 Quality and Environment Management Systems

3 credits (2-0-2)

Module I : Concept of Total Quality, Quality Management Systems as a means of achieving total quality. Linkage of Quality and Environment Management System. Strategic concern for Environment. Need and relevance of documentation and standardization of Management Systems. Various tools of documenting and recording the Management Systems, Various standards for Management Systems. Flexibility and change in Management Systems and documented procedures.

Module II : Quality Management Systems, ISO 9000, Quality Policy, Data, Records and Traceability. Documenting the Quality System: Quality Manual, Quality Audit, Design and Change Control, ISO 9000 Registration. Six Sigma. Awards and appreciation, DMAIC approach.

Module III : Need for proper Environment Management Systems and their economic implications. Environment Management Systems, Green Products and Strategies, Environment Assessment: Environment Protection Act, ISO 14000, Case Studies.

MSL716 Fundamentals of Management Systems

3 credits (3-0-0)

Module I : Basics and Variants. The concept of a system, Systems Approach to management. Emerging paradigm, customer centred management systems, Flexible Management Systems. Management

of Paradoxes. Management Systems in various countries: Western Management Systems, Japanese Management Systems, Chinese Management System, Indian Management Systems. Organisational Culture and Value System.

Module II : Management Systems in Operation: Strategic Planning Systems, Management Control Systems, Financial Information Systems, Marketing Management Systems, Logistics and Distribution Systems, Systems for Human Resources Planning and Performance Management. System Dynamics Modelling.

Module III : Methodologies for Development and Improvement. Methodology for developing Management System. Optimization and Learning Systems methodologies, Microworld, Continuous Improvement and Reengineering of Management Systems. Organizing to improve systems.

MSL717 Business Systems Analysis & Design

3 credits (3-0-0)

This course will have the following topics: System Analysis Fundamentals: Introducing SA&D for Systems Professionals, Analyzing the Business Case and Managing Systems Projects, Overview to Data Structure in Systems Modeling, Data Flow Diagrams and Modelling DFDs, Requirements Modelling and Systems Specification, User Driven Business Analysis, Role of the consultant, Object Oriented Modelling: Object Relationships, Hierarchies, Use Case Approaches to identify and model classes, Process Driven Approaches: Gane, Sarson and Yourdon techniques, Data Driven Approaches: Entity Relationship Diagrams, Designing the User Interface and Output, Verification & Validation of new systems.

MSL719 Statistics for Management

3 credits (3-0-0)

Nature and role of statistics for management. Types of data, data measurement scales, Descriptive Statistics: Measures of Central Tendency, Measures of Dispersion. Introduction to probability theory. Probability Theory: Preliminary concepts in Probability, Basic Theorems and rules for dependent/independent events, Random Variable, Probability distributions. Sampling Techniques, Sampling distributions. Hypothesis testing: Z-test, t-test, ANOVA, Chi-square tests, Correlation and regression analysis. Business Forecasting. SPSS and its use for statistical modeling.

MSL720 Macroeconomic Environment of Business

3 credits (3-0-0)

Introduction to macroeconomic environment of business, Macroeconomic policies and Business Cycles, Economic Growth vs. Economic Development, Measurement of macroeconomic performance, Classical Macroeconomic Theory, Keynesian Model Income determination, Great Depression of 1930s; South East Asian Crisis of 90s, Sub-prime Crisis of 2007 and Euro crisis and Fiscal Sustainability; and their impact on the Business. Economic Reforms in India, Growth pattern of Indian economy, Fiscal Policy and its managerial implications to the industry, Government Budget, Monetary policy analysis and its implications to industry. Industrial Policy of India, Competition Policy of India, Balance of Payments, WTO and India.

MSL721 Econometrics

3 credits (3-0-0)

Introduction to Econometrics, Simple linear regression model. Multiple linear regression model, Discrete Choice, Panel Data, Time Series, Stationarity, VAR, Co-integration and Error correction models.

MSL723 Telecommunications Systems Management

3 credits (3-0-0)

Module I : Telecom Technology Systems Evolution: Recent Developments in Telecom Industry, Regulation & Liberalization policy. Techno-managerial aspects of telecommunication, role of the telecommunication managers in a dynamic environment. The business of telecommunication; telecommunication as a facilitating infrastructure for economic development of the country, technical survey of the ways and means that voice, data and video traffic are moved long distances, data network, the telephone system.

Module II : Issues of the monopolization and deregulation of telecom, national telecom policy, various institutions/organizations like telecom regulatory authority etc; conveyance. Telecom service costing, economic evaluation of telecom projects, telecom project financing.

Module III : Telecom marketing, building brand equity for competitive advantage, Customer care, total service quality management, preparing for the new millennium managing change and people development.

MSL724 Communication Skills

1.5 credits (1-0-1)

On completion of this course, students would be able to: Evaluate the key purposes of communication in business. Explain the communication process model and the barriers to effective communication. Understand & evaluate the changing landscape of business communication. Apply techniques for effective communication.

MSL725 Negotiation Skills & Strategies

1.5 credits (1-0-1)

Students who complete this course would be able to: a. Understand the nature, process and structure of negotiations. b. Understand different types of negotiations and the dynamics of cooperative and competitive interaction in negotiations. d. Appreciate and leverage their bargaining position in a situation. e. Learn and apply influence and persuasion techniques. f. Learn ways to build lasting working relationships. g. Understand and appreciate ethical negotiations.

MSL726 Telecom Systems Analysis, Planning and Design

3 credits (3-0-0)

Module I : An introduction to the basic system analysis tools, the procedures for conducting system analysis advanced software principles, techniques and processes for designing and implementing complex telecommunication systems.

Module II : Planning and implementation of telecommunications systems from strategic planning through requirements, the initial analysis, the general feasibility study, structured analysis, detailed analysis, logical design, and implementation.

Module III : Current system documentation through use of classical and structural tools and techniques for describing flows, data flows, data structures, file designs, input and output designs, and program specifications. The student would gain practical experience through a project as part of a term paper.

MSL727 Interpersonal Behavior & Team Dynamics

1.5 credits (1-0-1)

On completion of this course, students would be able to: Understand the nature, structure and formation of teams. Appreciate the competitive and collaborative dynamics between teams and sub-teams. Understand and apply techniques for building and sustaining high performing teams. Reflect on their roles within teams and its impact on other members.

MSL728 International Telecommunication Management

3 credits (3-0-0)

Module I : Historical development and evolution of telecom, managerial issues and structure of industry; evolution and role of international institutions; global trends in liberalization and de-regulations, Patterns of Transaction in international telecom management; managing the market growth; developing, operating and monitoring regulation issues.

Module II : Role of telecommunications in socio-economic development; ICT & Social change, new technologies and services for international telecommunications; data services and business applications, Telecom prospectus of WTO & other international bodies.

Module III : Current issues and organisational growth; telecom implications for the industry, value added services and market drives; regional prospectives on development of telecom; Human Resources

Planning and Industrial relations in ITSM; skill formation for ITSM and learning renewal, future directions of growth.

MSL729 Individual Behavior in Organization

1.5 credits (1.5-0-0)

This course will focus on understanding the nature, composition and relevance of organizational behaviour. Students will be introduced to the fundamental concepts and theories underpinning organizational behaviour. For every concept / theory introduced, its application for organizations would be discussed.

MSL730 Managing With Power

1.5 credits (1.5-0-0)

This course covers power dynamics, the basic art of influencing, types of power, display of power at various levels and power vs empowerment and ethics. Various cases and readings are included for deeper understanding and application of the learnings.

MSL731 Developing Self Awareness

1.5 credits (1-0-1)

Important areas of self awareness: Personal values, moral maturity, cognitive styles, attitude towards change, Locus of control, social needs of achievement, inclusion, control and affiliation.

MSL734 Management of Small & Medium Scale Industrial Enterprises

3 credits (3-0-0)

Module I : MSME Act 2006; Nature of entrepreneurial management, the new entrepreneur, his problems and prospects in the Indian environment. Practical aspects of setting up and running of industrial enterprises including formulation of projects and feasibility study for new projects.

Module II : Raising resources for new enterprises. Location, design, product and process. Choice of technique in small & medium businesses. Survey needs for growth of the enterprise. Monitoring to avoid sickness. Development and diversification.

Module III : Integration with LSEs and MNCs. Information network for new enterprises. Implication of WTO to SMEs. Globalisation & Competitiveness of SMEs. Entrepreneurship in the globalisation era.

MSL740 Quantitative Methods in Management

3 credits (3-0-0)

Module I : Role of quantitative methods and operations research for managerial decision making and support. Role of mathematical models in problem formulation and solving. Structure of decisions, statistical decision theory; decision making under uncertainty, risk, certainty. Decision Trees; Fuzzy Decision Making. Game theoretic applications. Mathematical Programming models- formulation and applications. Linear Programming- graphical method, Simplex technique; transportation, assignment and transshipment problems. Mixed Integer Programming.

Module II : Non-Linear Programming, introduction to Quadratic Programming, Geometric Programming and Direct Search techniques. Multiple Criteria Decision making- Goal programming, TOPSIS and AHP.

Module III : Sequential decisions using Dynamic Programming. PERT and CPM. Queuing theory- M/M/1 and M/M/n model. Monte Carlo System Simulation concepts and applications. Brief introduction to Non-traditional optimization. Case Study applications and use of OR software packages.

MSL745 Operations Management

3 credits (3-0-0)

Module I : Managing operations; planning and design of production and operations systems. service characteristics. Facilities planning- location, layout and movement of materials. Line balancing. Analytical tools and techniques for facilities planning and design.

Module II : Production forecasting. Aggregate planning and operations scheduling, Production Planning and Control. Purchasing, Materials Management and Inventory control and JIT Material Requirements Planning. MRPII, ERP, Optimization techniques applications.

Module III : Work Study, Value Engineering, Total quality & statistical process control. Maintenance management and equipment policies. Network planning and control. Line of Balance, World class manufacturing and factories of the future, Case studies.

MSL760 Marketing Management

3 credits (2-0-2)

Module I : Introduction to Marketing function; genesis, the marketing concept. Marketing Management System: objectives, its interfaces with other functions in the organisation. Environment of Marketing-Political Environment Economic Environment, Market segmentation Consumer buying behaviour. Socio- cultural environment. Legal Environment. Ethical issues in marketing.

Module II : Marketing Strategy- Marketing planning and Marketing programming. The concept of marketing mix, Product policy; the concept of product life cycle. New product decisions. Test marketing- Pricing, Management of distribution: channels of distribution. Advertising and promotions. The concept of Unique Selling Proposition.

Module III : Implementation and Control. The marketing organization- alternative organization structures; the concept of product management. Administration of the marketing programme: sales forecasting; marketing and sales budgeting; sales management; management of sales force. Evaluation of marketing performance; sales analysis; control of marketing effort; marketing audit.

MSL780 Managerial Economics

1.5 credits (1.5-0-0)

Introduction to managerial economics. Basic concepts, Consumer behavior, Demand analysis: Determinants, estimation and managerial uses of elasticity of demand. Demand forecasting. Supply function and Market equilibrium analysis. Production and Cost analysis and Equilibrium of the firm, production Analysis, Productivity Analysis, Production efficiency analysis. Pricing and output under different market situations: Perfect Competition, Monopolistic Competition, Monopoly, Oligopoly and Cartels.

MSL801 Technology Forecasting & Assessment

3 credits (3-0-0)

Module I : Forecasting as an input to technology planning, Futures Research, Elements of forecasting process. Types of forecasting methods. Quantitative methods of forecasting: time series models, growth curves, Precursor, Envelope curves, Experience curves, technical assessment.

Module II : Qualitative methods: Morphological analysis, Relevance trees, Delphi, Technological gap analysis, Analogy method, Organising for Technology Forecasting.

Module III : Technology assessment: Components, problem definition, Social description, Measure, Impact assessment. Strategies for assessment, Economic impact analysis. Assessment of risk and uncertainty. Safety and environment considerations.

MSL802 Management of Intellectual Property Rights

3 credits (3-0-0)

Module I : Nature of Intellectual Property; Patents, Industrial Design, Trademark and Copyright; Process of patenting and development; technological research, innovation, patenting, development; International cooperation on Intellectual Property; International treaties on IPRs; Patenting under PCT. Procedure for grants of patents.

Module II : Scope of Patent Rights; Licensing and transfer of technology; Patent information and databases; Geographical Indications.

Module III : Administration of Patent System. New developments in IPR; IPR of biological systems, plant varieties, computer softwares etc. Traditional knowledge; Case Studies; IPR and IITs.

MSL803 Technical Entrepreneurship

3 credits (3-0-0)

Module I : Basis and challenges of entrepreneurship Technological entrepreneurship, Innovation and entrepreneurship in technology based organisations, High tech. entrepreneurship. Entrepreneurial

characteristics. Concept of new ventures. Technology absorption, Appropriate technology. Networking with industries and institutions.

Module II : Starting a new technological venture and developing the business: Business idea, Business plan, Marketing plan, Financial plan, Organisational plan. Financing a new Venture: Sources of Capital, Venture Capital, Going public. Entrepreneurship & liberalization.

Module III : Managing the new technological venture: Developing systems in new venture, Managing doing early operations, Growth and expansion, ending the venture. Legal issues, Franchising and acquisition. Entrepreneurship, globalisation and Entrepreneurship.

MSL804 Procurement Management

3 credits (3-0-0)

This course will introduce students to purchasing and materials management by learning the planning production process, master scheduling, material requirements, and forecasting material demands and inventory levels. This course is designed to build on the student's knowledge of how effective material management improves supply chain performance.

MSL805 Services Operations Management

3 credits (3-0-0)

This case course explores the dimensions of successful service firms. It prepares students for enlightened management and suggests creative entrepreneurial opportunities. The main idea behind the course is:

To study "breakthrough" services in order to understand the operations of successful service firms that can be benchmarks for future management practice.

To develop an understanding of the "state of the art" of service management thinking.

To understand the dimensions of service growth both domestically and internationally.

MSL806 Mergers & Acquisitions

3 credits (3-0-0)

i. Valuation & Financial framework of M&A. ii. The strategic perspective of M&A. iii. The managerial perspective of M&A.

MSL807 Selected Topics in Strategic Management

1 credit (1-0-0)

Open Slot Course (To be decided when the course is floated).

MSL808 Systems Thinking

3 credits (3-0-0)

Module I: Systems thinking in management; Hard and soft systems thinking; open systems thinking; Analytical and systems approaches; System concepts, principles and metaphors; General systems theory and cybernetics

Module II: Theory building with causal loop diagrams; Feedback loop structures; Linking feedback, stock and flow structures; Tutorial on Stella; Case Studies on system dynamics modelling

Module III: Soft systems methodology; Flexible systems thinking; Management of continuity and change; Interpretive systems model.

MSL809 Cyber Security: Managing Risks

3 credits (3-0-0)

This course introduces students to the interdisciplinary field of cybersecurity by discussing the following: cybersecurity theory, and the relationship of cybersecurity to nations, businesses, society, and people, cybersecurity technologies, processes, and procedures, analyzing threats, vulnerabilities and risks present in these environments, and develop appropriate strategies to mitigate potential cybersecurity problems, advanced policy related topics would also be covered through which these risks may be mitigated. Other relevant advanced topics may be explored.

MSL810 Advanced Data Mining for Business Decisions

1.5 credits (1.5-0-0)

This course will expose the participants to the following topics within this domain: Understanding advanced models of data mining, advanced unsupervised mining methods and approaches, Decision Support Systems, Group Decision Support Systems, Consensus based systems, Multi-criteria decision systems, Knowledge management systems, knowledge management methods, Intelligent systems, Hybrid data mining methods, Advanced and emergent topics and applications.

MSL811 Management Control Systems

3 credits (3-0-0)

Module I : Nature of Management Control Systems: planning and control process. Essentials of Management Control System. Behavioural aspects of Management Control-motivation and morale, goal congruency, and so on. Management Control Process: Programming, Budgetary Planning and Procedures, Fixed and Flexible Budgeting, Zero Base Budgeting. Internal Audit and Internal Control. Standard Cost Accounting Systems as measures of operating performance.

Module II : Variance Analysis and reporting of financial performance: Material, Labour and Overhead Cost Variances, Revenue Variances, Profit Variances, Variance Reporting.

Module III : Management Control Structure: Responsibility Accounting System- Concept of Responsibility Centre, Expense Centre, Profit Centre, Investment Centre. Inter-Divisional Transfer Pricing System, Measurement of Division Performance.

MSL812 Flexible Systems Management

3 credits (3-0-0)

Module I : Emerging management paradigms: Total Quality Management, Business Process Reengineering, Learning Organisation, World Class Organisation, Flexibility in Management. Concept of systemic flexibility. Liberalisation, Globalisation and change. New Organisation forms.

Module II : Concept and dimensions of Systemic flexibility. Managing paradoxes. Methodology and tools of flexible systems management. Underlying values, and guiding principles, Case Analysis using SAP-LAP framework. SAP-LAP models and linkages.

Module III : Flexibility in functional systems, Information Systems flexibility, manufacturing flexibility, organisational flexibility, financial flexibility, and strategic flexibility. Linkage of flexibility with organisational performance.

MSL813 Systems Methodology for Management

3 credits (3-0-0)

Module I : Introduction to systems methodology, Flexible Systems Methodology, Need and applicability of Systems methodology for management. Nature of managerial problems. System Dynamics Methodology- Philosophy, Foundation, Steps, building blocks, feedback structures, principles of systems, learning organisation.

Module II : Validation, Simulation and testing of System Dynamics models, Policy analysis, Micro world and Management games, Managerial applications of Systems methodology.

Module III : Management of physical systems. Physical system theory: fundamental premises and postulates, modelling of basic processes, application to manufacturing, managerial, and socio-economic systems. Critical comparison and integration of Physical System Theory and System Dynamics. Flexibility in physical system theory.

MSL814 Data Visualization

1.5 credits (1.5-0-0)

This course would have the following: It would train the participants to use visual imagery to present complex information and the trends associated with extensive data. Visualization provides a solution to address information overload, through a well-designed visual encoding to aid comprehension, memory, and decision making. Furthermore, visual representations may help engage more diverse audiences in the process of analytic thinking. Topics like data and image models,

heat maps, infographics, multidimensional data visualization and representation, graphical perceptions, mapping & cartography and text visualization may be covered. Other relevant topics within the subject domain may also be explored.

MSL815 Decision Support and Expert Systems

3 credits (2-0-2)

Module I : The management support framework for computers. Fundamentals of decision theory and decision modelling. Humans and information processors and information systems as decision systems. Human decision styles.

Module II : Models, heuristics, and simulation. Overview of DSS-database, modelbase, user interface. DSS development methodology and tools. Need for expertise in decision models and expert systems. Expert systems fundamentals. Knowledge engineering, knowledge representation and inferencing. Building expert systems.

Module III : Integrating expert systems and DSSs. Strategies for implementing and maintaining management support systems. Case studies, and laboratory and filed projects.

MSL816 Total Quality Management

3 credits (2-0-2)

Module I : Introduction to TQM; Customer Orientation, Continuous Improvement, Quality, Productivity and Flexibility, Approaches and philosophies of TQM, Quality Awards, Strategic Quality Management, TQM and corporate culture, Total Quality Control; Basic Analytical tools-Check Sheets; Histograms; Pareto charts, Cause and Effect diagrams; Flow charts.

Module II : Statistical Process Control; Advanced Analytical tools-Statistical Design of Experiments; Taguchi Approach; Cost of Quality; Reliability and failure analysis. FMECA, Quality Function Deployment, Benchmarking, Concurrent Engineering.

Module III : Quality Teams, Employee practices in TQM organisations: Leadership, delegation; empowerment and motivation; role of communication in Total Quality, Quality Circles; Total Employee Involvement; Problem Solving in TQM- Brain storming; Nominal Group Technique Team process; Kaizen and Innovation; Measurement and audit for TQM; Quality Information Systems, ISO 9000 series of Quality Standards; TQM Implementation; Reengineering and TQM.

MSL817 Systems Waste & Sustainability

3 credits (3-0-0)

Module I : Introduction to waste and waste management. The concept of wastivity and its inter-relationship with Productivity Quality and Flexibility. Systems concept of waste, complementarily of waste and resource management. Functional elements of waste management. Waste management and cost reduction. Taxonomy of wastes, JIT, TQM and waste.

Module II : Management of waste in industrial and service sectors. Management of manpower waste and unemployment. Management of energy waste in the national economy. Energy recycling, Waste management and energy conservation. Total energy concept, overall energy wastivity.

Module III : Interfaces of waste management: environment control, nature conservation, resource development, Quality and Productivity Management, Business Process Reengineering. Role of legislation and government. Waste management and national planning.

MSL818 Industrial Waste Management

3 credits (2-0-2)

Module I : The concept of industrial system. Systems waste and waste management. Wastivity and productivity measurement. The categories of industrial systems waste. Stages and causes of waste generation in industrial systems. Waste reduction measures and systems in industry. Collection and disposal system of scrap, surplus and obsolete items. Recycling and processing of industrial waste. Industrial pollution and environment control.

Module II : Value engineering, design waste and cost reduction.

Inspection rejects and quality management. Reliability, maintenance, breakdown and management of waste. Space waste and layout planning. Time management, manpower waste in industry, absenteeism. Capacity utilization. Waste heat recovery and energy waste in industry. Resource conversation/loss prevention in process industries. Data and information waste, management of hazardous waste. Waste treatment. Natural calamities. Accident prevention, industrial safety and waste management.

Module III : Waste management in Indian industries- present practices, potentials and perspectives. Management of waste in different industrial systems- steel, aluminum, power, automobile, transport and other service industries. Economic analysis and system models of industrial waste management systems. Analytical and Creative techniques to waste control.

MSL819 Business Process Re-engineering

3 credits (3-0-0)

Module I : Nature, significance and rationale of Business Process Reengineering, Reengineering scenarios in major countries, Problems issues, scope and trends in BPR, Implementing BPR: Methodology and steps, IT enabled reengineering, mediation and collaboration.

Module II : The paradigm of Mass customization, managing organisational change, Transforming/ Reinventing the enterprise, Team building. Case studies of success as well as failure.

Module III : People view, empowering people, reengineering management. Issues of purpose, culture, process and performance, and people.

MSL820 Global Business Environment

3 credits (3-0-0)

Module I : *Global Scene. Historical and economic background*, firms and International Business. The global scene and the challenges ahead, challenges to free International Trade Political Risk, Protection, Accounting, Taxation and Legal practices. The International debt risks.

Module II : Regional Issues. Global Monetary Institutions and Trade Agreements, Regional Trade Agreements and Facts. Socio-cultural context of International Business: European countries, U.S.A. developing of newly industrialized countries and Japan. Management of Multinational firms.

Module III : Globalization of Indian Economy. Liberalization and globalization of Indian business. India's multinationals, Indian laws and policies relating to investment in India by international firms and outside India by Indian firms.

MSL821 Strategy Execution Excellence

3 credits (3-0-0)

Maximize your leadership potential by expanding your management skills through this one-year graduate certificate management program. This comprehensive program offers you the opportunity to broaden your perspective on salient management responsibilities and skills in key sectors such as health care, not-for-profit, community services, and technology and trades. Students must also participate in two weekend residency (virtual or on-campus) activities. This program enables you to leverage your existing career and educational experiences to move into management positions. You will take a series of carefully selected business courses that will build and enhance your skills in critical areas of management such as finance, marketing, human resources, and realizing the Power of Balanced Scorecard leadership. In addition, you will have the option to select courses from specific industry streams- health care, community services, not-for-profit, and trades/technology. These courses are designed to provide industry-specific perspectives that will enhance your employability and career advancement.

MSL822 International Business

3 credits (3-0-0)

Module I : Key Issues in International Business. Socio-cultural, economic and political forces facing business. International sourcing. Understanding the determinants of competitive advantage in international business at the national, industry and firm level. Global

forces transforming international business. Multinational Corporation. Problems and Prospects in an International Environment, competitive and cooperative business strategy.

Module II : International Business Strategy of Indian Industry. Competitive position of key Indian Industries. Entry strategies for Indian firms: Joint Ventures, strategic/technical alliances/collaboration. Strategies employed by Indian firms to develop and sustain international business.

Module III : Globalization Strategy. Globalisation strategy, strategies of Multinational Corporation, implications for functional strategies: marketing, HR, planning, organisational structure, production, Global Information Systems, Strategy Alternatives for Global Market entry and expansion, International negotiations.

MSL823 Strategic Change & Flexibility

3 credits (3-0-0)

Module I : Patterns of Change and Flexibility. Patterns of change, liberalization, globalization and privatization, changes in Social Political and Economic environment, Technological and organizational change. Changes in customer requirements. Impact of change of business and workforce. Need for flexibility, concept of Strategic Flexibility: Openness, Adaptiveness, Change, and Resilience. Understanding the process of strategic change. Managing chaos strategically. Regenerating strategies.

Module II : Revising Strategies Postures. Corporate restructuring, Alliances, joint ventures, acquisitions and merges. Recorganising the firm, the impact of mergers and acquisitions on organizational performance. Management of continuity and change, Blue Ocean strategy.

Module III : Energising Strategies Change. Reengineering the corporation, identification of key business processes. Organization of the future. Implementing Strategic Change. Transforming the organization. Sustaining change. Consolidating gains and producing more change. Anchoring new approaches in the culture. Leading a high-commitment high-performance organization. Organization Vitalizations

MSL824 Policy Dynamics & Learning Organization

3 credits (3-0-0)

Module I : Learning Organization. Emergence of learning organization. Strategies for organization learning, using Feedback, shared vision, team work, personal mastery, mental models, systems thinking, role of leader, organizational dynamics. Soft Systems Methodology application to policy formulation. Flexibility in policy strategy. Strategy formulation in a learning organisation, clarifying vision and opportunities for change in a learning organization.

Module II : Micro World and Policy Dynamics. Systems-linked organization model. Micro world for policy learning. System Dynamics modeling applied to policy formulations, conceptual model. The language of systems thinking links and qualitative system dynamics, Flexibility Influence Diagram, Collaboration Diagram, Archetypes, leverage points, Integrative simulation models.

Module III : Frontiers. Role playing games and case studies to develop principles for successful management of complex strategies in a dynamic world. Strategic Management game for policy planning, Interactive Planning. Strategic issues such as business cycles, market growth and stagnation. And diffusion of new technologies. Knowledge management in learning organizations.

MSL825 Strategies in Functional Management

3 credits (3-0-0)

Module I : Linkage of corporate and Business strategy with various Functional strategies, Flexibility in Functional Strategies. Marketing Strategy, financial Strategy.

Module II : Manufacturing Strategy, IT Strategy, Human Resources Strategy.

Module III : Technology Strategy, Quality and Productivity Strategy, Environmental Strategy.

MSL826 Business Ethics

3 credits (3-0-0)

Module I : Ethics in Business. Historical perspective, culture and ethics in India, codes and culture. Economics and the Environment: green business, Ethics and Competition. The ethical code, social audit. A framework for analysis and action. The sphere of personal ethics: consequences, rights and duties, virtue and character. Role of objectivity, practicability, judgement and balancing acts. The individual and the corporation.

Module II : Ethical Responsibilities. Ethical responsibilities of economic agents: role obligations, obligation to shareholder, rights and obligations to customers, obligations to pay taxes. Environmental protection. Corporate accountability, Ethical conflicts, concern for the locality, Attitude to labour. Ethics and Government policies and laws.

Module III : Ethics in Functions. Ethical responsibilities of organizations leader: power, leadership. Obstacles to ethical conduct. Pressures for conformity. Evaluation and rewards. Job pressures and issues. Organizational change. Ethics in use of Information technology. Intellectual Property Rights. Ethics in Marketing. Ethics of advertising and sponsorship. Freedom Vs State Control. Acquisitions and Mergers, Multinational decision making: Reconciling International norms.

MSL827 International Competitiveness

3 credits (3-0-0)

Module I : Introduction to Competitiveness. Background, Need, Basics, Myths; Global Perspectives, Context, Definitions, Benchmarking & Key Issues; Related concepts: Excellence, Value Creation; Competitiveness at Different Levels.

Module II : Evaluating & Planning for Competitiveness. Frameworks of Competitiveness & Strategy, Evaluating Competitiveness, Enhancing Competitiveness, Competitiveness Processes & Initiatives, Leadership Dimension, Cases.

Module III : Practitioners Perspectives. Business Models for Competitiveness, Functional (e.g. HR, Operational, Financial, Technological) Linkages, Partnerships/Cooperation for Competitiveness, Emerging Issues/ Practices.

MSL828 Global Strategic Management

3 credits (3-0-0)

Module I : The Process of Globalization and Global Strategy. Globalization of markets and competition, globalization and localization, Diagnosing Global Industry Potential, Designing a global strategy, Making Global strategies work, Global strategic alliances, M&A.

Module II : Regional Strategy and Entry Strategy. Regional Strategy, Emerging Markets Assessing Country Attractiveness, Entry Strategies: Subsidiaries, acquisitions, joint ventures, Licensing, Franchising, Agents and Distributors.

Module III : Managing Globally and Future Challenges. Designing a global organization, Global Marketing and Operations, Cross Cultural Management, Leadership and Global manager, Globalization and the Internet.

MSL829 Current and Emerging Issues in Strategic Management

3 credits (3-0-0)

(Relevant current and Emerging Issues)

MSL830 Organizational Structure and Processes

3 credits (3-0-0)

Module I : Organisational structure- classical and neoclassical theories. Strategy and structure. Modern Organizational theory- systems view of organisation and integration. Micro, intermediate, macro environment. Participative structures.

Module II : Work culture and organization processes. Decision processes, balance and conflict processes. The process of role and status development. Influence processes and technological processes. Capacity development in organizations.

Module III : Interface of structure and processes- structural functionalism; Allport and Event- Structure theory. Organizational Governance- organizations as a subject of political enquiry, Models of organizational governance. Making and breaking patterns.

MSL831 Management of Change

3 credits (2-0-2)

Module I : Process of change and organization theory and practice. Elements of change. Achieving Systematic change. Domains of systematic change-strategy, technology, structure and people. Planning for change.

Module II : Change and the use of power. Nature and sources of power. Leadership and change- Transactional vs. Transformational change. Change cycle including participative and coerced change.

Module III : Change through behaviour modification. Positive and negative reinforcement. Training for change. Managing conflict. Implementing change. Adjustment to change and organising for growth. Prerequisites and consequence of change. The change Dynamics.

MSL832 Managing Innovation for Organizational Effectiveness

3 credits (3-0-0)

Module I : Elements of creativity person, creative organization, nature of innovation. Assessing creativity. Tools and techniques for enhancing creativity. Innovation and risk.

Module II : Managing social equity and organisation efficiency paradox, blocks to creativity, methods to overcome the blocks. Introducing creativity in organisation. Structure and creativity. Work culture and innovation.

Module III : Practices of creativity and intervention strategies- organization excellence: Criteria and practice-innovation and quality, Innovation and BPR/appraisal system- interventions. Innovation and competitiveness.

MSL833 Organizational Development

3 credits (3-0-0)

Module I : Organisation Development- nature and scope. The generic and contextual element of developing organisation. Introduction to process change. Theories, strategies and techniques of organizational diagnosis for improving organisation's problem solving and renewal process, legacy factors and organizational growth.

Module II : Coping with environmental change. Socio-cultural dimensions of work and behaviour, Environmental analysis and impact. Diagnosis of the ongoing process from symptoms to causes. Organisation development and intervention strategies.

Module III : Personal change. Laboratory learning techniques. Managerial Grid. Sensitivity training. Transactional analysis. Inter-group and team building interventions. Management by objectives. Total system interventions-stabilising change.

MSL834 Managing Diversity at Workplace

1.5 credits (1.5-0-0)

The course introduces students to the relational framework towards diversity management by discussing the macro, meso and micro factors influencing DM. Through analysis of the different organizational approaches and initiatives towards diversity management, it highlights ways in which inclusive workplaces can be created and diversity leveraged for business performance.

MSL835 Labor Legislation and Industrial Relations

3 credits (2-0-2)

Module I : Introduction of industrial relation and a systematic view of personnel. Labour Relations. Introduction to Indian Trade Unionism. Industrial relations and conflict in industries. Introduction of Labour Regulation Act, Factories Act, Trade Union Act, and Safety Act.

Module II : Role of Industrial Legislation. Introduction of Industrial Dispute Act. Different jurisdiction of Labour Court. Issues in recognition of unions. Tribunal and national tribunal. Strategies for resolving Industrial Conflict, Collective bargaining. Works committee and joint consultative committee, Negotiation process.

Module III : Influence of Government regulations. Third party intervention in industrial disputes. Rules of grievances. Discipline in Industry. Contribution of tripartite bodies. Labour Welfare Participative Management. Workman's Compensation Act. Productivity in Industry. Healthy industrial relations and economic development.

MSL836 International Human Resources Management

1.5 credits (1.5-0-0)

The course would cover issues pertaining to selecting, managing and developing international workforce. It would sensitize students to the cross-cultural issues faced by global organizations and emerging issues within international HRM.

Lectures, small group discussions and case study analysis would be the primary teaching methods adopted in this course.

MSL837 Organization Theory

1.5 credits (1.5-0-0)

Different issues related to the organization would be discussed and then applied in real life situations, the emphasis will be on application of theory to real life situations. The course would be imparted through a combination of lectures, cases and simulation exercises.

MSL839 Current and Emerging Issues in Organizational Management

3 credits (3-0-0)

(Relevant current and Emerging Issues)

MSL840 Manufacturing Strategy

3 credits (3-0-0)

Module I : Manufacturing and operations strategy-relevance and concepts. Strategic issues in manufacturing & operations, Capacity planning, International innovations in manufacturing. Choice of technology and manufacturing process in the prevailing environment.

Module II : Technology-manufacturing process interfaces with marketing, engineering, quality, purchasing, finance and accounting. Inter-relationship among manufacturing manager and their suppliers, customers, competitors, superiors and production workers.

Module III : Strategic implications of Experience Curve. Focused manufacturing-green, lean and mean. Strategic issues in project management and implementation of manufacturing policies. Perspectives of Manufacturing Strategy. Case Studies.

MSL841 Supply Chain Analytics

3 credits (3-0-0)

This course will introduce students to supply chain analytics by learning the three aspects of supply chain planning and design. The first one is Descriptive Analytics of supply chain, which focuses on fundamental tools and methods on data analysis and statistics, visual representations of data and data modeling. The second major focus is on Predictive Analytics of supply chain, which develops approaches for building and analyzing predictive models, applying regression, forecasting techniques, simulation and risk analysis, etc. The third major focus is on Prescriptive Analytics of supply chain, which aims at arriving at optimal decisions for the different future scenarios in the supply chain.

MSL842 Supply Chain Modeling

3 credits (3-0-0)

This course primarily deals with understanding and analyzing problems underlying the design, planning and operation of supply chains, with a special emphasis on the logistical and other issues related to the material and the information flow in these systems. The main objective of the course is to introduce methodological description of the various

issues in supply chain related to design, planning and control problems. Mathematical models and techniques are used to support the analysis of the identified issues. It also develops understanding of some basic tools that can support the functioning of the analytical methodologies.

MSL843 Supply Chain Logistics Management

3 credits (3-0-0)

Module I : Perspective of Supply Chain Logistics Management. Logistics concept, role and scope; Logistics Environment- Integrating Logistics of Supply, Logistics of Production and Logistics of Distribution. Internal and external factors for logistics strategy, Operational Resources of logistics (personnel, warehouse means of transport, warehouse transport aids, organizational aids, material stocks, and area/spare) Effective supply chain management, customer networking and manufacturing, Risk Pooling, Postponement, cross docking in supply chain, CPFR, IT-enabled supply chains value of Information, Coordination in SCM.

Module II : Logistics Activity Mix. JIT and Logistics, Synchronised manufacturing. Purchasing and Materials Management. Distributional logistical systems and facilities-single stage or multistage, warehouse(s), their number, location and allocation, Automated Warehousing, Materials Handling and Packaging. Simulation aided planning of conveyor and warehousing systems.

Module III : Supply Chain Logistics Mix Management. Logistical Connectivity: Transportation modes, rate structure, legal aspects; maintenance, spares and repairs; test and support equipment, Routing of freight flows. Management and Organization of the Logistics Systems; Organization, Information and cost control; Logistical information Systems, Computer aided logistics management. Case Studies.

MSL844 Systems Reliability, Safety and Maintenance Management

3 credits (3-0-0)

Module I : Reliability, Safety, Risk Assessment Perspective.

Introduction to reliability, availability and safety engineering and management. Select statistical concepts and probability distributions. Optimization techniques for systems reliability, availability and safety. Reliability, availability, safety and maintainability. Risk assessment and management for reliability and safety.

Module II : Maintenance Planning and Control.

Maintenance management objectives and functions. Classification of Maintenance system. Maintenance Planning and Scheduling. Issues of Replacement versus reconditioning and imperfect repair maintenance models. Spare parts Inventory Planning and Control for single and multi-echelon systems. Diagnostic tools of failure analysis: Failure Mode Effect and Criticality Analysis, Fault Tree Analysis.

Module III : Information System for Reliability, Safety and Maintenance Management.

Organizational aspects and a computer aided management information system for reliability, safety and maintenance. Life cycle costing and cost management for maintenance. Human factors in maintenance, Maintenance Manpower Planning. Case Studies.

MSL845 Total Project Systems Management

3 credits (2-0-2)

Module I: Project Systems Management: a life cycle approach, project characteristics; project life cycle phases: conception, definition, planning and organising, implementation and project clean up. Project feasibility analysis. The project manager: role and responsibilities, Team Building and Conflict Management. Tools and techniques for project management. Environmental impact analysis of a project.

Module II: Network techniques for project management-PERT, CPM and GERT. Accounting for risk, uncertainty and fuzziness. Time cost tradeoffs and crashing procedures. Multi project planning and scheduling with limited resources. Multi objective, fuzzy and stochastic based formulations in a project environment.

Module III: Funds planning, performance budgeting and control. Project materials management. Pricing, estimating, and Contract Administration and Management, Building and Bid evaluation and analysis. Project implementation and monitoring, Project management information and control systems. Project systems management performance indices. Software Packages application for Project Systems Management. Case studies.

MSL846 Total Productivity Management

3 credits (3-0-0)

Module I: Total Productivity overview; meaning, relevance and scope for productivity and effectiveness. Productivity conceptualisation. Productivity mission, objectives, policies and strategies. Productivity environment. Corporate culture, management styles, employees participation, trade unions and role of governmental agencies. Productivity measurement, monitoring and management both at micro and macro levels. Corporate and annual productivity plans.

Module II: Benchmarking: Management issues, modelling, tools and techniques; indicators for evaluation of manufacturing, business or services organizational performance and its measurement.

Module III: Productivity Improvement Techniques: modifying organizational characteristics and work characteristics. Work study, Value Engineering, Waste Management. Human resource development strategies to increase productivity. Managing technological change. Interfaces of Productivity with Quality, Reliability and Safety. Management commitment and involvement for higher productivity. Case Studies.

MSL847 Advanced Methods for Management Research

3 credits (2-0-2)

Introduction to management research, types of management research, research designs, Portfolio of management research methodologies involving qualitative and quantitative tools, optimization approaches, Multi-criteria decision making tools, case studies, interpretative models, soft system methodology, simulation, etc. Design of a questionnaire-based survey instrument, development of data measurement, scale development, testing the validity and reliability of data, sampling techniques, descriptive statistical analysis, inferential analysis, sampling techniques, sampling distribution, hypothesis testing, ANOVA, factor analysis, correlation, regression : OLS, Logic, Tobit, Probit, Discriminant analysis, Co-integration, unit root testing, Granger, causality, VAR, GARCH and its variants. Structural equation modelling and other related research tools. Portfolio of optimization tools such as linear programming, goal programming, integer programming, Data Envelopment Analysis for designing a management research. Case study approach with SWOT, SAP-LAP, value chain, PEST, etc. AHP, ANP modeling of risk and uncertainty in management, real life case development with appropriate research design.

MSL848 Applied Operations Research

3 credits (3-0-0)

The objective of the course is to provide the students about the application of Operations Research (OR) in various functional areas of business such as operation, supply chain management, materials management, marketing, finance, and human resource. The entire course is a case based where the participants will be given a case. Participants will be asked to tackle the case problem without using OR using their own experience or any other logical method and then they will be asked to tackle the same situation applying OR. At the end of the course they will appreciate how OR can help the decision makers in an efficient decision making process.

MSL849 Current and Emerging Issues in Manufacturing Management

3 credits (3-0-0)

(Relevant current and Emerging Issues)

MSL850 Management of Information Technology

3 credits (3-0-0)

Module I : The Strategic Framework for IT Management. Emerging information technologies: IT for competitive advantage; IT for internal

effectiveness; IT for inter-organizational linkage; Module II Strategy Development and Planning Techniques.

Module II : IT Planning (CSFs, Scenario analysis, Linkage analysis, Enterprise modeling); Strategy formulation techniques; Nolan's stage model and revised models for Nolan's stages; IT investment decisions; methods for evaluating IT effectiveness; IT enabled business process redesign.

Module III : Strategic Issues Related to IT Management. Relating IT to organizational leadership, culture, structure, policy and strategy; programmer productivity; Managing legacy systems; evaluating centralization-issues; IT-forecasting.

MSL851 Strategic Alliance

1.5 credits (1.5-0-0)

This is an advanced strategy course that focuses on the role of strategic alliances and inter-firm networks in the overall strategic adaptation process of the firm. Inter-firm networks and strategic alliances have emerged as important strategic options for navigating survival and creating competitive advantage in times of high velocity turbulent environments characterized by pressures to master rapid technological developments, counteract new competitors and the never ending need to acquire and master new capabilities (technical and managerial). The course explores crucial success factors that distinguish successful from failing strategic alliances. The course utilizes case discussions supplemented with readings, lectures, and conceptual discussions.

MSL852 Network System: Applications and Management

3 credits (3-0-0)

Module I : Networking fundamentals. Communication fundamentals (transmission and transmission media; communication techniques; transmission efficiency) Wide area networks, local area networks, ISDNs; OSI architecture, IBM's SNA, Digital's DNA, Internetworking; network applications- EDI, Email, file transfer, conferencing, Enterprise networking.

Module II : Networking technologies and applications. Design and development of enterprise network; Web-based application development, Design of large-scale intranets, Network and systems management issues, Remote access to computer resources, Network and system security.

Module III : Managing networks. Preparing for doing business on the internet; Choosing and costing networks and network services; network management requirements; network performance indicators; performance monitoring.

MSL853 Software Project Management

3 credits (2-0-2)

This course may expose the participants to the following topics: IT Evolution and its implications for business, IT Productivity Paradox - Issues and Implications, Impact of IS in the Networked Economy, Reasons for success and failure of IT projects, Disaster planning, Approaches to IS Development (e.g. Portfolio approaches), Technology Justification and Alignment Models, Strategic impact of IT / IS, Role of the CIO and challenges in business continuity.

MSL854 Big Data Analytics & Data Science

1.5 credits (1.5-0-0)

This course may expose the student to the following themes within the discipline: Introduction to Data Science and Data Scientists, Introduction to Big Data, Theories in Data Science, Big data technologies, Large query data sets and associated theories, Exploring the Hadoop Ecosystem, Information management in Big Data and Emerging Issues.

MSL855 Electronic Commerce

3 credits (2-0-2)

This course may expose the participants to the following topics: Introduction to e-commerce, B2B E-commerce models, B2C E-commerce models, Mercantile processes, E-Commerce Infrastructure and Capacity Planning, Web Portals & Services, Trading, Pricing,

Auctions, Bartering & Negotiations, Advanced and emergent topics in E-Commerce, Inter-organization information systems, e-procurement systems, e-fulfillment systems, e-SCM, Risk management in E-commerce. Hands on training may also be provided.

MSL856 Business Intelligence

3 credits (3-0-0)

The course will consist of the following: Introduction to data mining, types of data mining systems, data preprocessing and data warehouses (OLAP/OLTP), Data Cube Computation and Data Generalization, Mining Frequent Patterns, Associations, Correlations, Classification, Prediction, Clustering, time series and sequence data analysis, Graph Mining, Social Network Analysis, and Multirelational Data Mining, Mining Object, Spatial, Multimedia, Text, and Web Data, Applications and trends.

MSL858 Business Process Management with IT

1.5 credits (1.5-0-0)

This course may expose the participants to the following topics: Concepts of process and business process, Processes and workflow management systems, Concepts and evolution of BPM technologies, Impact of IT in BPM and its road map, BPM Cycle, Process deployment, Process monitoring, Process optimization using IT tools, Flowcharting and business process mapping and emergent issues in BPM/BPR technologies. Other relevant topics within the subject domain may also be explored.

MSL859 Current and Emerging Issues in IT Management

3 credits (3-0-0)

(Relevant current and Emerging Issues)

MSL861 Market Research

3 credits (2-0-2)

Module I: Research concepts; exploratory, descriptive and conclusive research. The market decision-making process and the need of different types of research. Types of marketing problems and type of marketing research activity. Sources of data; use and appraisal of existing information.

Module II : Information from respondents, sampling design, scaling techniques and questionnaire design, interviewing, mail surveys. Information from experiment, experimental design for marketing, Motivational research, Advertising research, Analysis and reporting.

Module III : Marketing information systems, Structure and design, its role in planning and control; the place of marketing research.

MSL862 Product Management

3 credits (3-0-0)

Module I : The product in corporate life, Corporate and product objective, product management role, responsibility, scope and functions, product strategy and policy, optimum product pattern/line range.

Module II : New product development and launching. Challenge of change-opportunity and risk-product innovation, modification, addition and elimination product proposals-sources, generation, processing and selection. Establishing techno-economic feasibility product testing and test marketing. Developing the strategy and the plan. Implementing the plan, coordination and control. Brand identity, Image, Equity, Brand Plan and Management, New Product Development Process. Brand and Product launch plan.

Module III : Organization for Product Management, Marketing manager-product manager-brand manager concept, approaches and organizational role, product manager-functions and tasks-tools and techniques. Brand extensions, acquisitions, Brand value, Consumer insight. Strategies brand management.

MSL863 Advertising and Sales Promotion Management

3 credits (3-0-0)

Module I : Mass communication theory and practices, marketing and promotion mix- interrelationship and interdependence advertising. Sales Promotion, Publicity and Public Relations- Scope, Objectives, activities and creative role. Advertising, objectives tasks and process, market segmentation and target audience- Message and

copy development. Mass media, selection, planning, budgeting and scheduling. Integrated programme and budget planning. Implementing the programme, coordination and control. Advertising Agencies in India, their services and terms, advertisement campaign development, Agency selection and appointment; Agency Organization and operation, Getting the best of the agency services. Analysis of effectiveness of advertisement and promotional campaign.

Module II : Why and when sales promotion support, Sales promotion activities; Consumer Oriented-Sales channel Oriented-Sales staff oriented, Planning, budgeting, implementing and controlling campaigns. Advertisement development brief.

Module III : Valuation and measurement of advertising and sales promotion effectiveness, Company organization for advertising: sales manager, Sales Promotion Manager, Market Development Manager-Role of Tasks, advertising ethics, economics and social relevance. The Public Relations Activities, Public relations and mass media. Media planning and budgeting control.

MSL864 Corporate Communication

3 credits (2-0-2)

Corporate communications is a strategic tool that is leveraged to gain strategic advantage. Organizations use it to lead, motivate, persuade and inform both employees and outside stakeholders. How organizations set objectives, define messages and reach their employees, extended audiences, the media and customers, and how the company or group articulates its vision and brings its values to life, will all be discussed.

The course will familiarize students with some of the issues that specifically affect organisations and challenge the corporate communications function. Some of these issues include a change in CEO, mergers and acquisitions, imposition of government regulation and public pressure groups. Focus will be placed on crafting corporate messages for internal and external stakeholders. Specific subject.

MSL865 Sales Management

3 credits (2-0-2)

Module I : Organisational framework of the field sales force. Types and methods of field sales organisations-Career in Field Sales Management. Field Sales Manager- coordinating and controlling the Marketing mix, Tasks and responsibilities, team relations with Salesman and interaction and reporting relationship with Top Management. Operating environment for Field Sales Managers. Sales forecasting.

Module II : Sales Information and Planning, The qualities and role of a Field Sales Manager- Hierarchy of objectives and goals, concept of sales strategies and tactics; types of Planning. Marketing Intelligence and Sales Management. Relationship and contribution of Marketing Research to the sales development as decision making process. Designing and planning of sales territories, procedure for designing sales territories. Determining sales manpower requirements to establish sales territories- Recruiting salesman- selection process and system. Distribution and channel selection & Management.

Module III : Operational Management, Staffing: Its advantages, responsibility for staffing, tools and methods of selection. Sales training: Its objectives, programme content, Methods of training, concepts of territorial management for field sales force. Measurement and control: General considerations governing evaluation and sales performance and control. Sales audit, Sales budgeting, Key account management, Route Planning and control. Sales Promotion Customer relationship management.

MSL866 International Marketing

3 credits (3-0-0)

Module I : International marketing-its scope and tasks- world economy prospects and Challenges; India's external trade. Analysis of export performance. Why all organisations cannot go global Shipping terms and international trade terms. Information needs of exports. Costing and pricing in international trade. Advantages and disadvantages of globalisation.

Module II : Strategic export planning. Handling an export transaction.

Export marketing Checklist; Selection of Markets: Choosing Markets; Export pricing; Management of export logistics. Documentation for export; processing of an export trade. Sales forecasting in international trade, Identifying geographical territories for expansion. Cultural factors affecting business in global market.

Module III : Export credit system pre-shipment and post-shipment, finance, medium and long term credit financing; ECGC; Transportation and shipment of cargo; Marine insurance of cargo; procedure for claiming rebate of excise duty. Import replenishment licensing procedures. Generalized scheme of preferences. Sourcing and Transfer pricing mechanism. WTO related issues and IPR related issues impacting global trade.

MSL867 Industrial Marketing Management

3 credits (3-0-0)

Module I : Industrial marketing and Environment. Application of industrial buyer behaviour theories. Marketing plan to implement the marketing concept.

Module II : The new product development process. Personal selling (negotiations, systems selling, targets setting, fact finding, training); sales communications.

Module III : Marketing Research for industrial product Marketing control (variance analysis audit). Industrial purchase behaviour and processes, new product launch. Forecasting methods.

MSL868 Digital Research Methods

1.5 credits (1.5-0-0)

The course will have the following coverage: Internet as a research medium; Research design; Sampling methods; Online surveys; Nonreactive data collection; virtual ethnography; Online focus groups; secondary qualitative data analysis; blogs & videos as source of data; data analysis approaches; tools.

MSL869 Current and Emerging Issues in Marketing

3 credits (3-0-0)

(Relevant current and Emerging Issues)

MSL870 Corporate Governance

1.5 credits (1.5-0-0)

The course would broadly be divided into three modules. Module 1 would provide a global perspective to the students on the concept of corporate governance. Module 2 would focus on India and present the framework of corporate governance for Indian organizations. Module 3 would focus on corporate social responsibility (CSR) and its manifestations. Apart from the regular lectures and assignments, there would be a course pack provided to the students containing international and national reports, articles, studies and cases to help them build an international perspective through the self-study component.

MSL871 Banking and Financial Services

1.5 credits (1.5-0-0)

The course will comprise of two broad sections; banking and financial services. Banking portion will cover banking sector reforms, bank management, financial statements of banks, sources and uses of bank funds, credit monitoring and management by banks, bank capital and Basel norms. Financial services will encompass both fund based and fee based services that are an integral part of modern financial systems; it will include lease financing, hire purchase financing, consumer credit, factoring, housing finance, investment banking, credit rating, stock broking, depository and custodial services. The course work will encompass problem solving on relevant topics and inputs from real life cases to give a practical insight to the theoretical concepts.

MSL872 Working Capital Management

3 credits (3-0-0)

Module I : Nature and Financial of Working Capital. Nature of Working Capital, Trade-off between Profitability and Risk, Determinants of Working Capital. Factoring as a Sources Finance. Forecasting Working Capital requirements. Sources of financing Working Capital. Factoring

as a source of finance. Bank credit and working capital Finance. Approaches to determine Financing Mix. Working Capital Leverage. Cases and Practical Problems.

Module II : Current Assets Management. Cash Management, Inventory Management, Receivables Management. Cases and Practical Problems.

Module III : Analysis aTools and New Development. Operating Cycle, Ratio Analysis, Funds-flow Analysis and Cash-Flow Statement as tools of Working Capital Management. Recent changes and new developments. Practical Problems.

MSL873 Security Analysis & Portfolio Management

3 credits (3-0-0)

Module I : Investment Environment. Saving and Financial flows, Financial Intermediation, Investment in Corporate Securities and other Investment Outlets, New Issue market and Secondary Markets. Sources of investment information. Theoretical framework for investment Decision. Regulatory Framework of Securities Markets in India.

Module II : Valuation of Securities. Valuation of Variable Income Securities (Equity Shares): Theory of Valuation-Earnings and Dividend Model. Fundamental Analysis, Aggregate Economic Analysis, Industry Analysis, Company Analysis, Technical Analysis, Growth Shares, Under and Overvalued Shares. Analysis of Fixed Income Securities like Preference Shares, Debentures/Bonds and other Financial Instruments. Interest Rate structure and yield to Maturity Curve. Convertible Bonds: Warrants and Options.

Module III : Portfolio Management. General principles. Measures of Risk and Return, Required Rate of Return and CAPM, Markkowitz Portfolio Theory. Efficient Capital Market Theory. Alternative Efficient Market Hypotheses. Constructing the Optimum Portfolio.

MSL874 Indian Financial System

1.5 credits (1.5-0-0)

This course is an introduction to the Indian financial system and tends to appraise students with its components, functions and integration of its sub components with each other. It covers different types of financial institutions, financial markets and financial instruments and services through which the financial system operates. Also, the students would develop an understanding of the role played by the different financial intermediaries in developing a robust financial environment for any country. The course will also give insight into the role played by financial market regulators and the challenges being faced by them in the modern internationally integrated economies.

MSL875 International Financial Management

3 credits (3-0-0)

Module I : Foreign Exchange Market and Risk Management : Environment of International Financial Management: Balance of Payments. Means of International Payments, Foreign Exchange Market, Currency Futures and Options Markets, Foreign Exchange Risk Management, Political Risk, Interest Rate Risk.

Module II : Financing of International Operations : Determination of Exchange Rate, Exchange Market and Arbitrage, Exchange Rate Control, Financing of Exports and International Investments, International Monetary Systems, European Monetary System, International monetary and Financial Institutions.

Module III : Financial Management of MNCs : Capital Budgeting Decisions for Multinational Corporation, Financing Decisions- Cost of Capital and Financial Structure, Working Capital Management and Control, International Banking, International Transfer Pricing.

MSL876 Economics of Digital Business

1.5 credits (1.5-0-0)

This course may expose the participants to the following topics: Impact of diffusion of ICTs in Business and People, Trade-offs & Network effects, Economics of Data communication including pricing, Firms, Networks, Centralization, Decentralization in 2 sided markets, Factors affecting organizational structure and size, Dynamics of Open

Source and Open Innovation, Information, Search, Switching and Price dispersion, Information goods pricing and bundling. Other similar themes may also be explored.

MSL877 Electronic Government

1.5 credits (1.5-0-0)

This course may expose the participants to the following topics: Introduction to E-Governance, E-Governance models and frameworks, E-Governance infrastructure and stages in evolution, Information Management in Electronic Governance. Issues in Emerging and Developing Economies, Selective Case Studies in E-Governance, Emerging initiatives in electronic governance, Role of policy. Other relevant topics within the subject domain may also be explored.

MSL878 Electronic Payments

1.5 credits (1.5-0-0)

This course may expose the participants to the following topics: Different business models in electronic payments, Digital certificates and certificate chains, Automated clearing and settlement systems, Banking systems and foreign exchanges, Other players in the ecosystem, E-Payment and Card security, Micro-payments, P2P Payments, Electronic Cash, Challenges and role of policy. Other relevant topics within the subject domain may also be explored.

MSL879 Current and Emerging Issues in Finance

3 credits (3-0-0)

(Relevant current and Emerging Issues)

MSL880 Selected Topics in Management Methodology

3 credits (2-0-2)

MSL881 Management of Public Sector Enterprises in India

3 credits (3-0-0)

This course will expose the participants to the following topics: Concepts of cloud computing and its impact, Technology Road Map to Cloud Computing, Virtualization, Practical usage of virtualization, Cloud Computing Frameworks and Deployment models. Cloud resource utilization and optimization, Cloud and Web Services, Service Model Architectures, SLA and QoS, Service Oriented Architecture and Cloud Computing.

MSL882 Enterprise Cloud Computing

1.5 credits (1.5-0-0)

MSL883 ICTs, Development and Business

1.5 credits (1.5-0-0)

The course will cover the following topics: Introduction, Development agendas and place of ICTs, ICTs as appropriate technologies, ICTs in education, health, industry & enterprises; ICT policy & regulations. Politics of open technology standards; ICT consulting for government; ICTs, Bottom of Pyramid & Business.

MSL884 Information System Strategy

1.5 credits (1.5-0-0)

MSL885 Digital Marketing-Analytics & Optimization

3 credits (2-0-2)

The course may cover the following topics: Introduction and Perspectives in internet marketing, Online consumer behaviour and technology adoption theories, Managing the Word of Web, Mapping online communities & networks, Online pricing mechanisms, Social Network Analytics & Optimization, Web Analytics and Optimization, Traffic analytics, Online campaign and channel management, Managing the Web 2.0, Search Engine & Social Media Optimization, SMAC, Social CRMs, Metrics for E-Commerce Analytics, KPIs, Revenue Analytics.

MSL886 IT Consulting & Practice

1.5 credits (1.5-0-0)

This course may expose the participants to the following topics: Trends in the IT consulting industry, IT consulting issues and pain points, Critical IT issues and their organizational contexts, Marketing and

selling IT consulting projects, Project Entry Strategies, Contracting, Proposal Writing and making the sales pitch, Frameworks for technology evaluation. Frameworks for consulting intervention, change management and project closure, Implementation Planning for IT Projects, Managing Consulting Firms and Knowledge Management. Other relevant topics may also be explored.

MSL887 Mobile Commerce

3 credits (2-0-2)

This course may expose the participants to the following topics: Introduction to Ubiquitous computing, Mobile communication and emerging technologies, Ubiquitous business models and challenges, Security issues and information risk management in mobile commerce. Mobile services and location based services, Interface with Social Media and Cloud, Mobile banking and payment systems, Socio-economic development with m-Commerce, Mobile based services for e-governance. Introduction to mobile apps in the context of ICT ecosystem; explaining success of apps; app entrepreneurship; app economy, challenges of entrepreneurship and economy. Business models of app stores; mobile gaming; app customer segmentation; case studies.

MSL888 Data Warehousing for Business Decisions

1.5 credits (1.5-0-0)

This course may expose the participants to the following topics within this domain: Introduction to Database Management Systems, Hierarchical modelling, Multi-dimensional modeling of data, Design techniques and ETL, SQL. Data warehousing requirements for ETL; Data Warehousing Risks, OLAP and OLTP Management Issues, designing and supporting applications, Expanding a data warehouse. Other relevant topics within the subject domain may also be explored.

MSL889 Current and Emerging Issues in Public Sector management

3 credits (3-0-0)

(Relevant current and Emerging Issues)

MSD890 Major Project (Unique Core)

6 credits (0-0-12)

MSD891 Major Project (Unique Core)

6 credits (0-0-12)

MSL891 Data Analytics using SPSS

1.5 credits (1.5-0-0)

MSD892 Major Project (Unique Core)

6 credits (0-0-12)

MSL892 Predictive Analytics

1.5 credits (1.5-0-0)

This course may expose the participants to the following topics: Introduction to the different predictive analytics models, using predictive analytics in decision making, types of predictive modeling, agent modeling, Case Based Reasoning and Predictive Expert Systems. Text mining, Social Network Analytics, Heuristics, Swarm algorithms, Hybrid Methods and algorithms. Other relevant topics within the subject domain may also be explored.

MSL893 Public Policy Issues in the Information Age

1.5 credits (1.5-0-0)

This course may expose the participants to the following topics within this domain: Cyber Security Policies - National Cyber Security Policy, US, UK, EU; Global cyber security norms; Cloud computing policies; ICT Supply Chain trustworthiness; Social Media, Internet freedom of

expression; Security v/s Privacy - surveillance; Internet Governance; Encryption - national security v/s economic growth; International Cooperation - treaties, norms, conventions. Other relevant topics within the subject domain may also be explored.

MSL894 Social Media & Business Practices

1.5 credits (1.5-0-0)

Introduction, Definition, Types, and Dimensions; Status in India & the World; Different Revenue & Business Models; Situating Social Media in Business; Adoption in Organizations; Social Media & Applications: Viral marketing; Tool for SMEs, Customer Relationship Management, Researching Competitors; Digital Brand Management; Social Media Program Management; ROI; Influencers Index; and Social Media Audit & Policy in Organizations.

MSL896 International Economic Policy

3 credits (3-0-0)

World trade; The standard trade model; economies of scale and international trade; international factor movements; instruments of trade policy; exchange rates and foreign exchange markets; money, interest rates and exchange rates; price, output and exchange rates, different exchange rate regimes and policy, optimum currency area; Global capital markets; Financial crisis and contagion, Transition economies: crisis and reform.

MSL897 Consultancy Process and Skills

3 credits (3-0-0)

Module I : Introduction to Consultancy-its evolution, growth & status, Types of Consulting Services, firms and role of consultants, client-consultant relationship. Marketing of Consultancy Services.

Module II : The Consulting Process-Entry, Diagnosis, Action Planning, Implementation and Termination/Closing;

Module III : Methods of selection of consultants, Costs and fee calculation, Preparation of Consultancy proposals and Agreements, Technical Report Writing and Presentation.

MSL898 Consultancy Professional Practice

3 credits (3-0-0)

Module I : Negotiation Skills, Professional Ethics and Code of Conduct. Managing a Consultancy firm-fundamentals of consulting firm management, consulting firms and IT in consulting firms, management of consulting assignments.

Module II : Consulting in various areas of Management-Consulting in general and strategic management, consulting in financial management, consulting in marketing and distribution management, consulting in production and operation management, consulting in HRM, consulting in IT.

Module III : R&D-Consultancy relationship, Careers and Compensation in Consulting, Training and development of Consultants, Future Challenges and Opportunities in Consultancy.

MSL899 Current and Emerging Issues in Consultancy Management

3 credits (3-0-0)

MST893 Corporate Sector Attachment

2 credits (0-0-4)

MSC894 Seminar

3 credits (0-0-6)

MST894 Social Sector Attachment

1 credit (0-0-2)

Department of Mathematics

MTL100 Calculus

4 credits (3-1-0)

Review of limit, continuity and differentiability, uniform continuity. Mean value theorems and applications, Taylor's theorem, maxima and minima. Sequences and series, limsup, liminf, convergence of sequences and series of real numbers, absolute and conditional convergence.

Riemann integral, fundamental theorem of integral calculus, applications of definite integrals, improper integrals, beta and gamma functions.

Functions of several variables, limit and continuity, partial derivatives and differentiability, gradient, directional derivatives, chain rule, Taylor's theorem, maxima and minima and the method of Lagrange multipliers.

Double and triple integration, Jacobian and change of variables formula. Parameterization of curves and surfaces, vector fields, divergence and curl. Line integrals, Green's theorem, surface integral, Gauss and Stokes' theorems with applications.

MTL101 Linear Algebra and Differential Equations

4 credits (3-1-0)

Vector spaces over \mathbb{Q} , \mathbb{R} and \mathbb{C} , subspaces, linear independence, linear span of a set of vectors, basis and dimension of a vector space, sum and direct sum.

Systems of linear (homogeneous and non-homogeneous) equations, matrices and Gauss elimination, elementary row operations, row space, column space, null space and rank of a matrix.

Linear transformation, rank-nullity theorem and its applications, matrix representation of a linear transformation, change of basis and similarity.

Eigenvalues and eigenvectors, characteristic and minimal polynomials, Cayley-Hamilton theorem (without proof) and applications.

Review of first order differential equations, Picard's theorem, linear dependence and Wronskian. Dimensionality of space of solutions, linear ODE with constant coefficients of second and higher order, Cauchy-Euler equations, Method of undetermined coefficients and method of variation of parameters. Boundary Value Problems: Sturm-Liouville eigenvalue problems. System of linear differential equations with constant coefficients, fundamental matrix, matrix methods. Power Series and its convergence, power series method, Fourier series, Laplace Transform Method.

MTL102 Differential Equations

3 credits (3-0-0)

Overlaps with: MTL260

Systems of differential equations, Existence and uniqueness theorems for initial value problems of semilinear and nonlinear ODEs, continuous dependence and well-posedness; Comparison theorems of Sturm, Sturm-Liouville eigenvalue problems; Phase-plane analysis, Linear and Non-linear stability, Liapunov functions and applications; First order Partial differential equations, Method of characteristics, local and global solutions, envelope of solutions, complete and general solutions; Second order equations: Heat and Wave equation, fundamental solutions, method of eigenfunctions, Duhamel's principle. Maximum principles for Heat and Laplace equation, Green's functions.

MTL103 Optimization Methods and Applications

3 credits (3-0-0)

Overlaps with: MTL508, CHL774, MEL221

Linear programming - formulation through examples from engineering / business decision making problems, preliminary theory and geometry of linear programs, basic feasible solution, simplex method, variants of simplex method. Duality and its principles, interpretation of dual variables, dual simplex method. Linear integer programming, applications in real decision making problems, methods to solve linear integer programs, transportation problems: theory and methodology, assignment problems. Zero-sum matrix games, saddle point, linear

programming formulation of matrix games, network optimization problems LPP formulation. Nonlinear programming, Lagrange function, KKT optimality conditions, sufficiency of KKT under convexity of quadratic programming, Wolfe's method, applications of quadratic programs.

MTL104 Linear Algebra and Applications

3 credits (3-0-0)

Pre-requisites: MTL101

Overlaps with: MTL502

Introduce Fields: fields of numbers, finite fields. Review basis and dimension of a vector space, linear transformations, eigenvalue and eigenvector of an operator. LU Factorization. Some applications giving rise to Linear Systems Problems

Dual and double dual of a vector space and transpose of a linear transformation. Diagonalizability of linear operators of finite dimensional vector spaces, simultaneous triangulization and simultaneous diagonalization. The primary decomposition theorem - diagonal and nilpotent parts.

Inner product spaces, Gram-Schmidt orthogonalization, best approximation of a vector by a vector belonging to a given subspace and application to least square problems. Adjoint of an operator, hermitian, unitary and normal operators. Singular Value Decomposition and its applications. Spectral decomposition. Introduction of bilinear and quadratic forms.

MTL105 Algebra

3 credits (3-0-0)

Overlaps with: MTL501

Preliminaries: Equivalence relations and partitions;

Groups: Subgroups, Cyclic groups, Abelian groups, permutation groups; Lagrange's theorem, normal subgroups, quotient groups, isomorphism theorems. Direct product of groups, structure theorem of finitely generated abelian groups, Sylow's theorems and applications.

Rings: Definition and examples, units and zero divisors. Ideals and quotients, principal ideals, prime ideals, maximal ideals, integral domain, PID, Euclidean domain, UFD. Modules over a commutative ring with unity: Free module, quotient module, exact sequences. Fields: Finite fields, field extensions, splitting fields.

MTL106 Probability and Stochastic Processes

4 credits (3-1-0)

Overlaps with: MTL108, EEL433

Axioms of probability, Probability space, Conditional probability, Independence, Bayes' rule, Random variable, Some common discrete and continuous distributions, Distribution of Functions of Random Variable, Moments, Generating functions, Two and higher dimensional distributions, Functions of random variables, Order statistics, Conditional distributions, Covariance, correlation coefficient, conditional expectation, Modes of convergences, Laws of large numbers, Central limit theorem, Definition of Stochastic process, Classification and properties of stochastic processes, Simple Markovian stochastic processes, Gaussian processes, Stationary processes, Discrete and continuous time Markov chains, Classification of states, Limiting distribution, Birth and death process, Poisson process, Steady state and transient distributions, Simple Markovian queueing models ($M/M/1$, $M/M/1/N$, $M/M/c/N$, $M/M/N/N$, $M/M/\infty$).

MTL107 Numerical Methods and Computations

3 credits (3-0-0)

Overlaps with: MTL509, CSL361

Errors in computation: source and types of errors, error propagation. computer representation of numbers: floating point representation, rounding error and floating point arithmetic. Roots of nonlinear equation in one variable: Direct and iterative methods, order of convergence. Iterative methods for roots of nonlinear system of equations. Linear systems of equations: Direct and iterative methods, rate of convergence of iterative methods, Condition

number and ill-conditioned systems. Interpolation: Lagrange, Newton divided difference formula, Newton's interpolations, errors in interpolation. Approximation: least square and uniform approximations. Differentiation: differentiation using interpolation formulas. Integration using interpolation: Newton-Cotes formulas, Gauss quadrature rules. Ordinary differential equations: Taylor, Euler and Runge-Kutta methods. Implementation of these methods.

MTL108 Introduction to Statistics

3 credits (3-0-0)

Overlaps with: MTL106, MTL390

Measures of central tendency, Dispersion, Skewness, Kurtosis, Data Representation using Histogram, Pie Chart, Boxplot, Biplot, Multi Dimensional Scaling etc. Concept of Random Variable, Some common discrete and continuous distributions, Distribution of Functions of Random Variables, Bivariate and Multivariate random variables. Sampling Distribution, Theory of Estimation, Properties of an estimator, Cramer Rao Theorem, Rao Blackwellization, One-sample and Two sample tests of Proportion, mean, variance, Critical regions, Neyman Pearson Lemma. Tests for Goodness of fit, Chi-square Test, Kolmogorov Smirnov Test, One sample and paired sample tests: Sign Test, Signed-rank Test, Run tests etc. Linear regression, Non-linear regression, Logit and Probit Methods.

MTL122 Real and Complex Analysis

4 credits (3-1-0)

Pre-requisites: MTL100

Overlaps with: MAL513, MAL514

Metric spaces: Definition and examples. Open, closed and bounded sets. Interior, closure and boundary. Convergence and completeness. Continuity and uniform continuity. Connectedness, compactness and separability. Heine-Borel theorem. Pointwise and uniform convergence of real-valued functions. Equicontinuity. Ascoli-Arzelà theorem. Limits, continuity and differentiability of functions of a complex variable. Analytic functions, the Cauchy-Riemann equations. Definition of contour integrals, Cauchy's integral formula and derivatives of analytic functions. Morera's and Liouville's theorems. Maximum modulus principle. Taylor and Laurent series. Isolated singular points and residues. Cauchy's residue theorem and applications.

MTL145 Number Theory

3 credits (3-0-0)

Divisibility: basic definition, properties, prime numbers, some results on distribution of primes; Congruences: basic definitions and properties, complete and reduced residue systems, theorems of Fermat, Euler & Wilson, application to RSA cryptosystem, linear congruences and Chinese Remainder theorem, quadratic congruences, and Quadratic Reciprocity law; Arithmetical functions: examples, with some properties and their rate of growth; Continued fractions, and their connections with Diophantine approximations, applications to linear and Pell's equations; Binary quadratic forms; Partition: basic properties and results; Diophantine equations: linear and quadratic, some general equations.

MTL146 Combinatorics

3 credits (3-0-0)

Pre-requisites: MTL180

Basic counting techniques; principle of inclusion and exclusion; recurrences and generating functions; Systems of Distinct Representatives & Hall's theorem; Extremal Set theory; Projective and combinatorial geometries; Latin squares; Designs & Steiner Triple Systems; Ramsey theory.

MTL180 Discrete Mathematical Structures

4 credits (3-1-0)

Overlaps with: COL105

Logic : Propositional Logic: language of propositional logic, truth table, natural deduction, predicate logic: language of predicate logic, Logical inference with Quantifiers. Proof techniques: Introduction to different standard proof techniques. Set Theory: Review of Basic Set Operations, cardinality of a set. Relations : Types of relations,

operations of relations and applications, Poset, topological ordering; Congruence arithmetic; Combinatorics: Counting techniques: Pigeon Hole principle, inclusion exclusion principle, recurrence relation and generating function; Graph Theory : Graph as a discrete structure, Modeling applications using graphs, Hamiltonian graphs, Planar graphs, Graph coloring, Matching;

MTL260 Boundary Value Problems

3 credits (3-0-0)

Pre-requisites: MTL100, MTL101

Sturm Liouville problem, Boundary Value Problems for nonhomogeneous ODEs, Green's Functions. Fourier Series and Integrals: Periodic Functions and Fourier Series, Arbitrary Period and Half-Range Expansions, Fourier Integral theorem and convergence of series. Parabolic equations: Heat equation, Fourier series solution, Different Boundary Conditions, Generalities on the Heat Conduction Problems on bounded and unbounded domains and applications in Option pricing.

The Wave Equation: The Vibrating String, Solution of the Vibrating String Problem, d'Alembert's Solution, One-Dimensional Wave Equation

The Potential Equation: Potential Equation in a Rectangle, Fourier series method, Potential equation in Unbounded Regions, Fourier integral representations, Potential in a Disk and Limitations.

Higher Dimensions and Other Coordinates: Two-Dimensional Wave Equation: Derivation, Parabolic equation, Solution by Fourier series, Problems in Polar Coordinates, Temperature in a Cylinder, Vibrations of a Circular Membrane

Finite dimensional approximations of solutions, piecewise linear polynomials and introduction to different methods like Galerkin and Petrov-Galerkin method.

MTL265 Mathematical Programming Techniques

3 credits (3-0-0)

Pre-requisites: MTL103

Overlaps with: CSL856

Recall of linear programming simplex algorithm and dual problem; primal-dual simplex method, linear programs with upper bounds, network optimization, network simplex method for non-capacitated and capacitated networks; dynamic programming, principle of optimality, general insight followed by in-depth examples; complexity of simplex algorithm, Karmarkar's interior point method; nonlinear programming, KKT conditions, convex programs, linear fractional programming problems, Charnes and Cooper technique, convex simplex method, Rosen projection method; multiobjective programming problems, applications to engineering and sciences, Pareto efficient solution, linear multiobjective programs, weighted sum approach, scalarization schemes, goal programming.

MTL270 Measure Integral and Probability

3 credits (3-0-0)

Overlaps with: MTL510

Measurable spaces, measurable sets, measurable functions, measure, outer measures and generation of measure, Lebesgue integration, basic integration theorem, comparison of Lebesgue and Riemann integrals, various modes of convergence of measurable functions, signed measure, Hahn and Jordan decomposition theorems, the Radon-Nikodym theorem, product measures and Fubini's theorem, probability measures and spaces, independent events, conditional probability, theorem of total probability, random variables, distribution and distribution function of a random variable, independent random variable, expectation, convergence in distribution of a sequence of random variables, weak and strong laws of large numbers, Kolmogorov's zero-one law, the central limit theorem, identically distributed summands, the Linderberg and Lyapounov theorems.

MTP290 Computing Laboratory

2 credits (0-0-4)

Pre-requisites: MTL101, MTL107

Programming concepts. Implementation of matrix operations, Complexity in Matrix Operations, Implementation of linear algebraic solvers; solution of systems of linear equations. Gauss elimination, LU decomposition and Iterative methods. Implementation of several Numerical Integration algorithms, Initial value problems and Boundary Value Problems for ODEs.

MTL342 Analysis and Design of Algorithms

4 credits (3-1-0)

Pre-requisites: MTL180

Overlaps with: CSL356

Models of computation: RAM and Turing Machines; Algorithm Analysis techniques; Basic techniques for designing algorithms: dynamic programming, divide-and-conquer and Greedy; DFS, BFS and their applications; Some Basic Graph Algorithms; linear time sorting algorithms; NP-Completeness and Approximation Algorithms.

MTD350 Mini Project

3 credits (0-0-6)

Pre-requisites: EC ??

Depends on the project topic.

MTL390 Statistical Methods

4 credits (3-1-0)

Pre-requisites: MTL106

Overlaps with: MTL108

Basic concepts and Data Visualization: Measures of central tendency, Dispersion, Skewness, Kurtosis, Data Representation using Histogram, Pie Chart, Boxplot, Biplot, Multi Dimensional Scaling etc. Revision of Probability Distribution: Emphasis on Normal, Chi-Square, Student's T, F distributions; Order Statistics: Different Order Statistics and their single and joint Distribution; Sampling Distribution of Mean, Variance; Random Number Generation: Generation of Random Numbers following certain distributions; Theory of Estimation (Point and Interval) Properties of an estimator, MVUE, BLUE, Cramer-Rao Inequality, Rao-Blackwell Theorem; Testing of Hypothesis: Mean and Variance, Confidence Interval, Neyman-Pearson Lemma; Non-Parametric Methods Run Tests, Rank Tests, Signed Rank Tests, Kruskal Wallis Test, Kolmogorov-Smirnov Test etc.; Regression Analysis Linear Regression, Multiple Regression, Logit, Probit, Regression; Time Series Analysis: Time Series Decomposition, Smoothing and Moving Averages, ARIMA Models.

MTL411 Functional Analysis

3 credits (3-0-0)

Pre-requisites: MTL104 and MTL122

Overlaps with: MTL602

Review of some basic concepts in metric spaces and topological spaces; Normed linear spaces and Banach spaces, Examples of Banach spaces, Bounded linear operators and examples, Finite dimensional Banach spaces; Introduction of Lebesgue integration on real line, Fatou's lemma, monotone convergence theorem, dominated convergence theorem, Lp spaces; Hahn Banach extension theorem, Hahn Banach separation theorem, Uniform boundedness principle, Open mapping theorem, Closed graph theorem; Characterization of dual of certain concrete Banach spaces; Weak topology, Weak* topology, Banach-Alaoglu theorem; Schauder basis and separability, Reflexive Banach spaces, Best approximation in Banach spaces; Hilbert spaces and their geometry; Basic operator theory, Compact operators, Spectral theory of compact operators, Spectral theory of compact self-adjoint operators, Sturm-Liouville operators.

MTL415 Parallel Algorithms

3 credits (3-0-0)

Pre-requisites: MTL342

Overlaps with: MTL765

Parallel architecture: Shared/local memory systems, pipelining, hypercubes, mesh, linear array etc. Degree of parallelism, Speed-up and efficiency of a parallel algorithm. Principles of parallel algorithm

design. Basic communication operations. Parallel algorithms: searching and sorting, matrix-vector and matrix-matrix multiplication for dense, band and triangular matrices. Parallel algorithms for direct methods for dense, band and triangular matrices. Cholesky method. Solving recurrence relations. Parallel iterative methods for finite difference equations of elliptic boundary value problems: point-Jacobi, line Jacobi, block Jacobi methods, 2 colour and multicolour Gauss-Seidel, SOR, SSOR methods. Domain decomposition method in one and two dimensions. Parallel preconditioned conjugate gradient methods. Quadrant interlocking factorization.

MTD421 B.Tech. Project

4 credits (0-0-8)

Pre-requisites: EC 100

contents will be related to topic from the courses undertaken by the student in the programme.

MTL445 Computational Methods for Differential Equations

4 credits (3-0-2)

Pre-requisites: MTL107

Overlaps with: MTL712

Numerical methods for solving IVPs for ODEs: Difference equations, Routh-Hurwitz criterion, Test Equation. Single step methods: Taylor series method, explicit Runge-Kutta methods, convergence, order, relative and absolute stability. Multistep methods: Development of linear multistep method using interpolation and undetermined parameter approach, convergence, order, relative and absolute stability, Predictor Corrector methods. Solution of initial value problems of systems of ODEs. BVP: Finite difference methods for second order ODEs, Eigenvalue problems.

PDEs: Finite difference methods for Elliptic PDEs, Consistency, stability and convergence. Boundary Conditions. FD methods for Parabolic equations in 1D and 2D. Operator splitting methods, Convergence, stability and consistency of difference methods. Higher order methods. Introduction to Hyperbolic PDEs, FD methods. Upwind schemes, Consistency, stability and convergence of schemes. Second order schemes.

MTL458 Operating Systems

4 credits (3-0-2)

Pre-requisites: MTL342

Overlaps with: CSL373, EEL358

Operating Systems functions, Basic Concepts, Notion of a process, concurrent processes, problem of mutual exclusion, Deadlock, process Scheduling, memory management, multiprogramming, File systems; time sharing systems and their design consideration.

MTL501 Algebra

4 credits (3-1-0)

Groups, subgroups, Lagrange theorem, quotient groups, isomorphism theorems; cyclic groups, dihedral groups, symmetric groups, alternating groups; simple groups, simplicity of alternating groups; Group action, Sylow theorems and applications; free abelian groups, structure of finitely generated abelian groups; Solvable and nilpotent groups, composition series, Jordan-Holder theorem.

Rings, examples: polynomial rings, formal power series, matrix rings, group rings; prime ideals, maximal ideals, quotient rings, isomorphism theorems; Integral domains, PID, UFD, Euclidean domains, division rings, field of fractions; primes and irreducibles, irreducibility criteria; product of rings, Chinese remainder theorem.

Field extension, algebraic extension, algebraic closure, straight edge and compass constructions, splitting fields, separable and inseparable extensions, fundamental theorem of Galois theory; solvability by radicals.

MTL502 Linear Algebra

4 credits (3-1-0)

Revision of existence-uniqueness of solutions of a system of linear equations, elementary row operations, row-reduced echelon matrices.

Vector spaces, span of a subset, bases and dimension, quotient spaces, direct sums. Linear transformations, rank-nullity, matrix representation of a linear transformation, algebra of linear transformations, dual space, transpose of a linear transformation. Eigenvalues, eigenvectors, annihilating polynomials, Cayley-Hamilton theorem, invariant subspaces, triangulable and diagonalizable linear operators. Simultaneous triangulation and diagonalization, Primary decomposition theorem, Jordan decomposition.

Cyclic decomposition theorem, Rational and Jordan canonical forms.

Inner product spaces over \mathbb{R} (real numbers) and \mathbb{C} (complex numbers), Gram-Schmidt orthogonalization process, orthogonal projection, best approximation. Adjoint of a linear operator, unitary and normal operators, spectral theory of normal operators. Bilinear forms, symmetric and skew-symmetric bilinear forms, quadratic forms.

MTL503 Real Analysis

4 credits (3-1-0)

Elementary set theory, Countable and Uncountable sets, Real number system and its order completeness.

Metric spaces, Continuous and uniformly continuous functions, Homeomorphism and isometry, Completeness, Fixed Points, Baire's Category Theorem, Totally bounded metrics, Compactness, Connectedness.

Sequences and series of functions, Pointwise and uniform convergence of sequences of functions, Equicontinuity, Arzelà-Ascoli Theorem, Dini's Theorem, Stone-Weierstrass Theorems (Lattice and algebra versions).

Functions of several variables, Linear transformations, Differentiation, Inverse function theorem, Implicit Function theorem, Derivatives of higher order.

MTL504 Ordinary Differential Equations

4 credits (3-1-0)

Initial value problems, Cauchy-Picard Theorem. General theory of linear differential systems. Sturm's theory on separation and comparison properties of solutions, Boundary value problems, Green functions, Sturm-Liouville problems, Weyl-Titchmarsh theorem for unbounded interval- limit cycle, limit point cases. Power series method, regular singular points, Legendre and Bessel equations, Linear system with constant coefficients, fundamental matrix, linear systems with periodic coefficients. Critical points, phase plane analysis and concepts of linear and nonlinear stability. Autonomous systems and applications.

MTL505 Computer Programming

4 credits (3-1-0)

Introduction to Computers - CPU, ALU, I/O devices,

Introduction to C Programming - Data types, Looping Statements, Arrays, Structure, Functions (Both simple and Recursive function), Call by Value and Call by reference, Pointers, File Handling in C

Introduction to C++ Programming, Looping Statements, arrays and Structures in C++, Functions in C++, Basic OOPS concepts.

MTL506 Complex Analysis

4 credits (3-1-0)

Field of complex numbers, complex plane, polar representation, stereographic projection.

Analytic functions, Cauchy-Riemann equation, harmonic conjugates, power series, Möbius transforms.

Contour integrals, power series representation of an analytic function, zeros of an analytic function, Liouville's theorem and applications.

Index of a closed curve, Cauchy's theorem, Cauchy integral formula, Open mapping theorem, Goursat's theorem.

Isolated singularities, Laurent Series, Residue theorem and application to real integrals. Meromorphic functions, Argument principle and

Rouche's theorem.

Maximum modulus principle and Schwarz's Lemma.

MTL507 Topology

4 credits (3-1-0)

Topological spaces: Definitions and Examples, Basis and Subbasis for a Topology, limit points, closure, interior; Continuous functions, Homeomorphisms; Subspace Topology, Metric Topology, Product & Box Topology, Order Topology; Quotient spaces.

Connectedness and Compactness: Connectedness, Path connectedness; Connected subspaces of the real line; Components and local connectedness; Compact spaces, Limit point compactness, Sequential compactness; Local compactness, One point compactification; Tychonoff theorem.

Countability Axioms: First countable spaces, Second countable spaces, Separable spaces, Lindelöf spaces.

Separation Axioms: Hausdorff, Regular and Normal spaces; Urysohn's lemma; Urysohn's Metrization theorem; Tietze extension theorem.

Complete Metric Spaces and Function Spaces: Characterization of compact metric spaces; Equicontinuity, Ascoli-Arzelà theorem.

MTL508 Mathematical Programming

4 credits (3-1-0)

Linear programs formulation through examples from engineering / business decision making problems, preliminary theory and geometry of linear programs, basic feasible solution, simplex method, variants of simplex method, like two phase method and revised simplex method; duality and its principles, interpretation of dual variables, dual simplex method, primal-dual method; linear integer programs, their applications in real decision making problems, cutting plane and branch and bound methods, transportation problems, assignment problems, network maximum flow problems; complexity of simplex method, ellipsoid method, Karmarkar's interior point method; nonlinear programming, Lagrange multipliers, Farkas lemma, constraint qualification, KKT optimality conditions, sufficiency of KKT under convexity; quadratic programs, Wolfe method, applications of quadratic programs in some domains like portfolio optimization and support vector machines, etc.

MTL509 Numerical Analysis

4 credits (3-1-0)

Numerical Algorithms and errors, Floating point systems, Roundoff error accumulations. Interpolation: Lagrange Interpolation Newton's divided difference interpolation. Finite differences. Hermite Interpolation. Cubic splines. Numerical differentiation. Numerical Integration: Newton cotes formulas, Gaussian Quadrature composite quadrature formulas

Approximation: Least squares approximation, minimum maximum error techniques. Legendre and Chebyshev polynomials. Solution of Nonlinear equations: Fixed point iteration, bisection, Secant, Regula-Falsi, Newton-Raphson methods. Solution of linear systems: Direct methods, Gauss elimination, LU and Cholesky factorizations. Iterative methods – Jacobi, Gauss-Seidel and SOR methods. System of nonlinear equation, Eigen-Value problems: Power and Inverse power method. Numerical Solution of ODE. Taylor series, Euler and Runge-Kutta methods.

MTL510 Measure and Integration

4 credits (3-0-2)

Outer measures, measures and measurable sets, Lebesgue measure on \mathbb{R} , Borel measure

Measurable functions, simple functions, Egoroff's theorem, Lebesgue integral and its properties, monotone convergence theorem, Fatou's Lemma, Dominated convergence theorem various modes of convergence and their relations

Signed measures, Hahn and Jordan decomposition theorems, Lebesgue-Radon-Nikodym theorem, Lebesgue decomposition

theorem, the representation of positive linear functionals on $C_c(X)$

Product measures, iterated integrals, Fubini's and Tonelli's theorems

L_p spaces and their completeness, conjugate space of L_p for $1 < p < \infty$, conjugate space of L_1 for sigma-finite measure space

Differentiation of monotone functions, functions of bounded variation, differentiation of an integral, absolute continuity.

MTL601 Probability and Statistics

4 credits (3-1-0)

Probability definition, conditional probability, Bayes theorem, random variables, expectation and variance, specific discrete and continuous distributions, e.g. uniform, Binomial, Poisson, geometric, Pascal, hypergeometric, exponential, normal, gamma, beta, moment generating function, Poisson process, Chebyshev's inequality, bivariate and multivariate distributions, joint, marginal and conditional distributions, order statistics, law of large numbers, central limit theorem, sampling distributions - Chi-sq, Student's t, F, theory of estimation, maximum likelihood test, testing of hypothesis, nonparametric analysis, test of goodness of fit.

MTL602 Functional Analysis

4 credits (3-1-0)

Normed linear spaces, Banach spaces and their examples, quotient spaces, bounded linear operators, finite dimensional Banach spaces, L_p Spaces, L_p spaces as examples for Banach spaces

Hahn Banach theorems, Uniform boundedness principle, open mapping theorem, closed graph theorem, transpose of an operator

Characterization of the dual of certain Banach spaces

Geometry of Banach spaces - Weak and weak* convergence,

Geometry of Hilbert spaces - Inner product spaces and its properties, Hilbert spaces and examples, best approximation in Hilbert spaces, orthogonal complements, orthonormal basis, dual of a Hilbert space

Basic operator theory - Adjoint of an operator, self-adjoint operators, normal and unitary operators, projections

Compact operators, examples and properties, spectral theorem for the compact self-adjoint operator.

MTL603 Partial Differential Equations

4 credits (3-1-0)

Linear and semi-linear equations, Cauchy problem, Method of characteristics. Cauchy-Kowalewsky theorem, Holmgren's Uniqueness Theorem. Classification of second order equations, wave equation in one space dimension, classical and weak solutions, Duhamel's principle. Laplace equation, fundamental solutions, maximum principles and mean value formulas, Properties of harmonic functions, Green's function, Energy methods, Perron's method, Parabolic equations in one space dimension, fundamental solution, maximum principle, existence and uniqueness theorems. Wave equation, Solutions by spherical means, Non-Homogeneous Problems, Duhamel's principle, Energy Methods. Nonlinear first order PDE's: Complete integrals, Envelopes and singular solutions. Some special methods for finding solutions: Similarity solutions, Hopf-Cole transformation.

MTL625 Principles of Optimization Theory

3 credits (3-0-0)

Convex set, hyperplane, relative interior and closure, separation theorems, theorems of alternatives for linear systems, convex functions and properties of continuity, differentiability etc., quasiconvex and pseudoconvex functions and their properties and interrelationships, minimax theorems for convex and quasiconvex functions, nonlinear programming, Lagrange function, saddle point, Fritz John optimality conditions, constraint qualifications, Karush-Kuhn-Tucker (KKT) necessary and sufficient optimality conditions, Wolfe and Mond-Weir duals, Wolfe method for quadratic programs, Projection gradient method, steepest descent method, conjugate gradient method, rank-1 methods, convergence, conjugate function, Fenchel duality, subgradient and subdifferential, nonsmooth optimization, tangent

cone, normal cone, nonsmooth KKT conditions, nonsmooth optimality conditions, subgradient method, proximal method, convergence of these methods, applications to support vector machines optimization problems.

MTD701 Project I

5 credits (0-0-10)

MTD702 Project 2

6 credits (0-0-12)

MTL704 Numerical Optimization

3 credits (3-0-0)

Pre-requisites: MTL103/MTL508

Unconstrained optimization techniques - one dimensional methods like Fibonacci method, Golden section method; higher dimension methods: pattern search method, Nelder and Mead method; gradient based methods: Steepest descent method, Newton method, Conjugate direction and gradient method, Quasi-Newton methods. Constrained optimization techniques - penalty method, barrier method, cutting plane method, projection gradient method. Heuristic technique: like Genetic programming method to solve non-convex programs.

MTL710 Database Management Systems

4 credits (3-0-2)

Pre-requisites: MTL342

Overlaps with: CSL332, CSL762

Introduction to database concepts: data independence, consistency, security and integrity; Types of data models and their conversion; Indexing; Database design: Functional dependencies, Normal forms, Decomposition of Relations; Relational Algebra and Relational Calculus; Query languages; Distributed databases; Transactions and concurrency control: Schedules and serializability, concurrency control techniques, locking mechanisms; Recovery and security: Types of failures and recovery manager, Transaction logging and checkpointing.

MTL712 Computational Methods for Differential Equations

4 credits (3-0-2)

Pre-requisites: MTL107/MTL509

Numerical methods for solving IVPs for ODEs: Difference equations, Routh-Hurwitz criterion, Test Equation. Single step methods: Taylor series method, explicit Runge-Kutta methods, convergence, order, relative and absolute stability. Multistep methods: Development of linear multistep method using interpolation and undetermined parameter approach, convergence, order, relative and absolute stability, Predictor Corrector methods. Solution of initial value problems of systems of ODEs. BVP: Finite difference methods for second order ODEs, Eigenvalue problems.

PDEs: Finite difference methods for Elliptic PDEs, Consistency, stability and convergence. Boundary Conditions. FD methods for Parabolic equations in 1D and 2D. Operator splitting methods, Convergence, stability and consistency of difference methods. Higher order methods. Introduction to Hyperbolic PDEs, FD methods. Upwind schemes, Consistency, stability and convergence of schemes. Second order schemes.

MTL717 Fuzzy Sets and Applications

3 credits (3-0-0)

Fuzzy sets, fuzzy relations, matrix representation of fuzzy relations, fuzzy numbers, fuzzy arithmetic, Zadeh's extension principle, ordering fuzzy numbers, ranking functions; Fuzzy aggregation, t-norm, t-conorm, fuzzy negation, other aggregation operators, OWA operators; Fuzzy relational equations (FRE), algorithms to solve system of FRE; Fuzzy optimization, fuzzy linear program; Fuzzy measures, belief and plausibility, necessity and possibility, Sugeno and Choquet integrals on finite sets; Fuzzy logic and approximate reasoning, If-then-else rules, Mamdani model, TSK model, SAM model; Applications of fuzzy sets and logics in areas of image processing, control, AI,

computing with words, etc.; Generalized fuzzy sets - like type2 fuzzy sets, rough sets, and Intuitionistic fuzzy sets.

MTL720 Neurocomputing and Applications

3 credits (3-0-0)

Overlaps with: EEL781

Biological and Artificial Neuron, Perceptron model, Adaline model, Multilayered feedforward networks, Activation functions, Back-propagation algorithm and its improvements, Conjugate Gradient Neural Network, Applications of Back-propagation algorithm to Statistical Pattern Classification, Feature selection, Classification and regression problems, General Regression Neural Networks, Hopfield Network, Recurrent networks, Probabilistic Neural Networks, Kohonen's self-organizing maps with quadratic junctions and its applications to character recognition, Adaptive Resonance Theory model, Applications of ART model for knowledge acquisition.

MTL725 Stochastic Processes and its Applications

3 credits (3-0-0)

Stochastic processes, specification of stochastic processes, stationary processes, discrete time and continuous time Markov chains, birth and death processes, applications in queueing theory. Markov processes with continuous state space, martingales, applications in financial mathematics. Renewal processes and theory, Markov renewal and semi-Markov processes, branching processes.

MTL728 Category Theory

3 credits (3-0-0)

Categories, functors and natural transformations, adjoints (of functors), representable functors, Yoneda Lemma and applications. Limits and colimits, interaction between functors and limits. Limits in terms of representables and adjoints, limits and colimits of presheaves, interaction between adjoint functors and limits. Application to abelian category: complexes of R-modules, long exact sequence, mapping cone and cylinder, projective and injective resolution, derived functors, right and left exactness, Ext and Tor. Concept of presheaf and sheaf, group scheme and Hopf algebra.

MTL729 Computational Algebra and its Applications

3 credits (3-0-0)

Finite fields: Construction and examples. Polynomials over finite fields, their factorization/irreducibility and their applications to coding theory. Combinatorial applications. Symmetric and Public key cryptosystems particularly on Elliptic curves. Combinatorial group theory: investigation of groups on computers, finitely presented groups, coset enumeration. Fundamental problem of combinatorial group theory. Coset enumeration, Nielsen transformations. Braid Group cryptography. Automorphism groups. Computational methods for determining automorphism groups of certain finite groups. Computations of characters and representations of finite groups. Computer algebra programs. Computations of units in rings and group rings. Calculations in Lie algebras.

MTL730 Cryptography

3 credits (3-0-0)

Applying the corresponding algorithms programmes. (laboratory/design activities could also be included) Classical cryptosystems, Preview from number theory, Congruences and residue class rings, DES- security and generalizations, Prime number generation. Public Key Cryptosystems of RSA, Rabin, etc. their security and cryptanalysis.

Primality, factorization and quadratic sieve, efficiency of other factoring algorithms.

Finite fields: Construction and examples. Diffie-Hellman key exchange.

Discrete logarithm problem in general and on finite fields. Cryptosystems based on Discrete logarithm problem such as Massey-Omura cryptosystems. Algorithms For finding discrete logarithms, their analysis. Polynomials on finite fields and Their factorization/irreducibility and their application to coding theory.

Elliptic curves, Public key cryptosystems particularly on Elliptic curves. Problems of key exchange, discrete logarithms and the elliptic curve

logarithm problem.

Implementation of elliptic curve cryptosystems. Counting of points on Elliptic Curves over Galois Fields of order 2m. Other systems such as Hyper Elliptic Curves And cryptosystems based on them. Combinatorial group theory: investigation of groups on computers, finitely presented groups, coset enumeration. Fundamental problems of combinatorial group theory. Coset enumeration, Nielsen and Tietze transformations. Braid Group cryptography.

Cryptographic hash functions. Authentication, Digital Signatures, Identification, certification infrastructure and other applied aspects.

MTL731 Introduction to Chaotic Dynamical Systems

3 credits (3-0-0)

Topics to be covered include chaos, elementary bifurcations. Sarkovski's theorem, recurrence and equidistribution, codes, symbolic dynamics and chaotic behaviour. Higher dimensional dynamics, including horseshoes, Henon map. Stability of systems.

MTL732 Financial Mathematics

3 credits (3-0-0)

Pre-requisites: MTL103/MTL508

Overlaps with: MEL323/SML823

Financial markets, Interest computation, value, growth and discount factors, derivative products, basic option theory: single and multi-period binomial pricing models, Cox-Ross-Rubinstein (CRR) model, volatility, Black-Scholes formula for option pricing as a limit of CRR model, Greeks and hedging, Mean-Variance portfolio theory: Markowitz model, Capital Asset Pricing Model (CAPM), factor models, interest rates and interest rate derivatives, Binomial tree models.

MTL733 Stochastic of Finance

3 credits (3-0-0)

Pre-requisites: MTL106/MTL601

Stochastic Processes; Brownian and Geometric Brownian Motion; Levy Processes, Jump-Diffusion Processes; Conditional Expectations and Martingales; Ito Integrals, Ito's Formula; Stochastic Differential Equations; Change of Measure, Girsanov Theorem, Martingale Representation Theorem and Feymann-Kac Theorem; Applications of Stochastic Calculus in Finance, Option Pricing, Interest Rate Derivatives, Levy Processes in Credit Risk.

MTL735 Advanced Number Theory

3 credits (3-0-0)

Overlaps with: MTL145

Divisibility, prime numbers, Bertrand's theorem, Congruences, complete & reduced residue systems, theorems of Fermat, Euler, Wilson & Wolstenholme, solutions of general congruences, study of linear and system of linear congruences, Chinese Remainder theorem, study of quadratic congruences, Quadratic, Cubic & Biquadratic Reciprocity laws, binary and ternary quadratic forms, Continued fractions, Diophantine approximations and applications to linear and Pell's equations, Arithmetical functions, properties, rate of growth, Distribution of primes, Dirichlet's theorem on primes in arithmetic progression, Prime Number theorem, Diophantine equations, special cases of the Fermat equation, introduction to classic and modern techniques.

MTL737 Differential Geometry

3 credits (3-0-0)

Curves in plane and space, arc-length, reparametrization, curvature of a plane curve, curvature and torsion of a space curve

Simple closed curves, isoperimetric inequality, Four-vertex theorem

Surfaces, smooth surfaces and examples, level surfaces, quadric surfaces, surfaces of revolution, ruled surfaces smooth maps, tangent space, derivatives, orientability of surfaces

The first fundamental form, lengths of curves on surfaces, isometries, conformal mappings, equiareal maps

The second fundamental form, Gauss and Weingarten maps, normal and geodesic curvatures, Gaussian and mean curvatures, principal curvatures

Surfaces of constant Gaussian curvature, surfaces of constant mean curvature, flat surfaces

Parallel transport, geodesics and their examples, properties, geodesic equations, geodesics as shortest paths, Gauss and Codazzi-Minardi equations, Theorema Egregium

Gauss-Bonnet Theorem. Introduction to hyperbolic and spherical geometry.

MTL738 Commutative Algebra

3 credits (3-0-0)

Pre-requisites: MTL105/MTL501

Revision of Rings and Ideals: Prime and maximal ideals. Chinese remainder theorem, Nilradical, Jacobson radical, operations on ideals, extension and contraction; Module, submodule, quotient module, sums and products, Nakayama's lemma; Homomorphism, kernel, cokernel, direct sum, direct product, universal properties, free module, exact sequences, tensor product of modules and its exactness property; Rings and modules of fractions and functorial properties of fractions; Primary decomposition; Integral dependence, going-up and going down theorems, valuation rings; Chain conditions, Noetherian rings, Artinian rings, discrete valuation ring and Dedekind domains, fractional ideals; Completion: filtration, graded rings and modules; Dimension theory: Hilbert function, dimension theory of Noetherian local ring, regular local rings, transcendental dimension.

MTL739 Representation of Finite Groups

3 credits (3-0-0)

Pre-requisites: MTL105/MTL501

Revision of basic group theory. Definition and examples of representation. Subrepresentation, sum and tensor product of representations, irreducible representations; Character Theory: Character of a representation, Schur's Lemma, Maschke's theorem, Orthogonality relations for characters, decomposition of regular representation, number of irreducible representations of a group; Representation of subgroups and product of groups, induced representations; Group Algebra: Representations and modules; Decomposition of complex algebra $\mathbb{C}[G]$ and Integrability properties of characters. Induced representations, restriction to subgroups, Reciprocity formula, Mackey's irreducibility criterion; Irreducible representations of symmetric groups (S_n) and alternating groups (A_n).

MTL741 Fractal Geometry

3 credits (3-0-0)

Code spaces, Hausdorff metric, Hausdorff measures, fractal dimensions, Hausdorff dimension, Box-counting dimensions, groups and rings of fractal dimension, semigroups of iterated function schemes (IFS) and self-similarity, Cantor sets, Cantor dusts, Koch Snowflake, Sierpinski's triangle, Diophantine approximation, chaos games, attractors, fractals, superfractals and multi fractal measures, Mandelbrot and Julia sets, random fractals, fractals in Brownian motion.

MTL742 Operator Theory

3 credits (3-0-0)

Pre-requisites: MTL411/MTL602

Weak and weak*-topologies, closed convex sets, weak compactness, Alaoglu's theorem, locally convex topologies, separation of points by linear functionals, Krein-Milman theorem, Stone-Weierstrass theorem.

Normed algebras, resolvent, spectrum, spectral radius, functional calculus, spectral mapping theorem, Gelfand's theory of commutative Banach algebras

Basic properties of compact operators, spectral theory of compact operators, Fredholm alternative, General theory of Schatten-von Neumann classes, Hilbert-Schmidt operators, trace and trace duality in finite dimensions, duality for Schatten-von Neumann classes

Functional calculus for self-adjoint operators, square root of positive operators, polar decomposition, some topologies on $B(H)$, spectral measures, the spectral theorem for normal operators.

MTL743 Fourier Analysis

3 credits (3-0-0)

Pre-requisites: MTL122/MTL503

Fourier Series - Definition, uniqueness, convolution, summability, convergence of Fourier series, Fourier series for square integrable functions, Plancherel theorem, Riesz-Fischer theorem, Gibbs's phenomenon, divergence of Fourier series

Applications of Fourier series – Isoperimetric inequality, Weierstrass approximation theorem, Weyl's equidistribution theorem, heat equation on the circle.

Fourier transform – Schwartz space on \mathbb{R} , Fourier transform on the Schwartz space, Fourier transform of integrable and square-integrable functions, Poisson summation formula.

Tempered distributions – Topology on the Schwartz space, tempered distributions and its properties, Fourier transform of tempered distributions.

Applications – Uncertainty principle, Paley-Wiener theorem, Wiener's theorem, Shannon sampling theorem, multiplier theorem for integrable functions.

MTL744 Mathematical Theory of Coding

3 credits (3-0-0)

Pre-requisites: MTL105/MTL501

Overlaps with: EEL710

Review of communication channels, maximum likelihood and nearest neighbour decoding schemes, Hamming distance, Distance of a code. Structure of finite fields, Linear codes and their duals, Equivalence of linear codes, encoding with a linear code, decoding of a linear code, ISBN Code, Hamming codes. Hadamard matrix codes, Golay codes, Codes and Latin squares. Non-linear codes, Nordstrom-Robinson code, Kerdock codes, Preparata codes. Bounds in coding theory: Sphere-covering bound, Hamming bound and perfect codes, Singleton bound and MDS codes, Gilbert-Varshamov bound, Plotkin bound, Griesmer bound. Weight enumerators, MacWilliams Identity. Construction of new codes: Propagation rules, Reed-Muller codes, subfield codes.

The structure of cyclic codes, encoding and decoding with a cyclic code, minimal codes, Some special cyclic codes including BCH codes and their decoding algorithm, Reed-Solomon codes, quadratic residue codes. Burst errors, Burst error-correcting codes, decoding of cyclic burst-error-correcting codes. Generalized Reed-Solomon codes, Alternant codes, Goppa codes, Sudan decoding for generalized RS codes.

MTL745 Advanced Matrix Theory

3 credits (3-0-0)

Review of Linear Algebra; Matrix calculus, Diagonalization, Canonical forms and invariant Factors. Quadratic forms, Courant-Fischer minimax and related Theorems. Perron-Frobenius theory, Matrix stability, Inequalities, g-inverses. Direct, iterative, projection and rotation methods for solving linear systems and eigenvalue problems. Applications.

MTL746 Methods of Applied Mathematics

3 credits (3-0-0)

Expansion in Eigen functions, Fourier series and Fourier Integral, orthogonal expansion, mean square approximation, completeness, orthogonal polynomials and their properties.

Integral transform and their applications

Linear function, general variation of a functional, direct variation methods for solution of boundary value problems

Integral equations of Volterra and Fredholm type, separable and symmetric kernels, Hilbert-Schmidt theory, Singular integral equations, approximation methods of solving integral equations.

MTL747 Mathematical Logic*3 credits (3-0-0)*

Propositional Logic - Syntax, Semantics and Normal Forms, First Order Logic Syntax, Semantics and Normal Forms, Herbrand interpretation, Resolution of PL and FL, Proofs in PL and FL, Axiomatic Systems, Adequacy and Compactness, Program Verification, Hoare Proof, Godels completeness and incompleteness Theorem, Turing Machines and undecidability of Predicate calculus, Gentzen systems, Introduction to other logics - Description Logic, Default & Defeasible Logic, Courteous Logic, Modal Logic, Fuzzy logic.

MTL751 Symbolic Dynamics*3 credits (3-0-0)*

Shift Spaces, languages, subshifts of finite type, their graph representation, sofic shifts, their presentation and characterization, entropy, its properties, conjugacy, shift equivalence and dimension groups, zeta functions.

MTL754 Principles of Computer Graphics*3 credits (3-0-0)**Overlaps with: EEL754/COL781*

Overview of Graphics Systems; Raster Graphics: line and circle drawing algorithms, Windowing and clipping: Cohen - Sutherland line clipping, Cyrus beck clipping method, Polygon Clipping; 2D and 3D Geometrical Transformations: scaling, translation, rotation, reflection; 3D Object representation: Curves and Surfaces: cubic splines, Bezier curves B-splines, surface of revolution, sweep surfaces; viewing Transformations: parallel and perspective projection; Hidden line/surface removal methods; illuminations model; shading: Gouraud, Phong; Introduction to Ray-tracing; Programming practices with standard graphics libraries like open GL.

MTL755 Algebraic Geometry*3 credits (3-0-0)**Pre-requisites: MTL105/MTL501*

Rings of polynomials and their quotients, local rings, DVR, modules, free modules, exact sequences. Affine algebraic sets, The Hilbert basis theorem. Hilbert's Nullstellensatz. Affine varieties: Coordinate rings, polynomial maps, coordinate changes, rational functions. Local Properties of plane curves: Multiple points, tangent lines, multiplicities and local rings, intersection number. Projective varieties: projective algebraic sets, projective plane curves, linear systems of curves, Bezout's theorem, Max Noether's fundamental theorem and its applications. Variety, Morphisms and Rational maps: The Zariski topology, varieties and their morphism, dimension of varieties, rational maps. Resolution of singularities: Blowing up a point in affine and projective planes, quadratic transformations and nonsingular models of curves.

MTL756 Lie Algebras and Lie Groups*3 credits (3-0-0)**Pre-requisites: MTL105/MTL501**Overlaps with: MAL856*

Definition and examples, solvable and nilpotent Lie algebras, the Engel's theorem, Lie's theorem, Cartan's theorem, Killing form. Representation theory of finite dimensional semisimple Lie algebras. The Weyl's theorem, representations of $sl(2, \mathbb{C})$, root space decomposition. Weyl group, Cartan subalgebras and classification of root systems; Definition and examples of matrix Lie groups. Exponential mapping, Baker-Campbell-Hausdorff formula. Representation theory of matrix Lie groups. Representation theory of $SU(2)$ and $SU(3)$.

MTL757 Introduction to Algebraic Topology*3 credits (3-0-0)**Pre-requisites: MTL122/MTL507*

Homotopy of paths, fundamental group, covering spaces, fundamental group of the circle, Retraction and application, van Kampen theorem and application. Universal cover and classification of covering spaces. Deck transformation and group actions. Simplicial and Singular

homology, homotopy invariance, exact sequences- Mayer-Vietories Sequences, the equivalence of simplicial and singular homology.

MTL760 Advanced Algorithms*3 credits (3-0-0)**Pre-requisites: MTL342**Overlaps with: COL758*

MST: Fibonacci Heaps and $O(m \log \log n)$ time implementation of MST, Linear time MST verification Algorithm, A linear time randomized algorithm for MST, Finding min-cost arborescences; Dynamic Graph Algorithms; Review of NP-completeness; Introduction to NP-hard optimization problems; A brief introduction to LPP; Integer Programming Problem; Primal-Dual Algorithm; Approximation Algorithms: Primal-Dual Approximation Scheme; vertex cover, set cover, TSP; Hardness of Approximation; Introduction to Randomized Algorithms; Some basic Randomized algorithms; Probabilistic Method: Lovasz Local Lemma.

MTL761 Basic Ergodic Theory*3 credits (3-0-0)*

Measure spaces, Haar Measure, Poincare Recurrence Theorem, Hopf's Maximal Ergodic Theorem, Birkhoff's Ergodic Theorem, von Neumann's Ergodic Theorem, Isomorphism, Conjugacy and Spectral Isomorphism, Entropy, Topological Pressure and its relationship with Invariant Measures.

MTL762 Probability Theory*3 credits (3-0-0)*

Axiomatic definition of a probability measure, examples, properties of the probability measure, finite probability space, conditional probability and Bayes formula, countable probability space, general probability space.

Random variables, examples, sigma-field generated by a random variable, tail sigma-field, probability space on \mathbb{R} induced by a random variable.

Independent events, sigma-fields and random variables, Borel 0-1 criteria, Kolmogorov 0-1 criteria.

Distribution - definition and examples, properties, characterization, Jordan decomposition theorem, discrete, continuous and mixed random variables, standard discrete and continuous distributions, convolution of distributions.

Two dimension random variables, joint distributions, marginal distributions, operations on random variables and their corresponding distributions, multidimensional random variables and their distributions.

Expectation of a random variable, expectation of a discrete and a continuous random variable, moments and moment generating function, correlation, covariance and regression.

Various modes of convergence, Weak law of large numbers, strong law of large numbers.

Convergence in distribution, weak convergence of generalized distributions, Helly-Bray theorems, Scheffe's theorem.

Characteristic function - definition and examples, properties, uniqueness and inversion theorems, moments using characteristic function, Paul Levy's continuity property of characteristic functions, characterization of independent random variables.

Central limit theorem - Liapunov's and Lindeberg's condition, Lindeberg-Levy form.

Infinite divisibility, Levy-Khintchine theorem.

MTL763 Introduction to Game Theory*3 credits (3-0-0)*

Game Trees, Choice Functions and Strategies, Choice Subtrees, Equilibrium N-tuples Strategies, Normal Forms, Non-cooperative games, Nash Equilibrium and its computation, The von Neumann Minimax Theorem, Mixed strategies, Best Response Strategies, Matrix

Games and Linear Programming, Simplex Algorithm, Avoiding cycles and Achieving Feasibility, Dual-Simplex Algorithm, Duality Theorem, 2x2 Bimatrix Games, Nonlinear Programming Methods for Non-zero Sum Two-Person Games, Coalitions and Characteristic Functions, Imputations and their Dominance, The Core of a game, Strategic Equivalence, Stable Sets of Imputations, Shapley Values, N-Person Non-Zero Sum Games with continuum of strategies – Duels, Auctions, Nash Model with Security Point, Threats, Evolution, Stable Strategies, Population Games, Bayesian Games.

MTL765 Parallel Computing

3 credits (3-0-0)

Pre-requisites: MTL342

Overlaps with: CSL860

Introduction to Parallel Computing: Need, Scope, issues and motivation; Models of Parallel Computation: Taxonomy of Parallel Architectures-SIMD, MIMD; PRAM model of computation; Interconnection Networks: Tree, Hypercube, Mesh etc, dynamic Interconnection Network; Routing and communication mechanisms for static interconnection networks; elementary Parallel algorithms: Parallel reduction, Parallel prefix sums, List ranking, preorder Tree traversal, Merging. Basic Communication Operations: point to point message transfer, broadcasting, all to all broadcasting, one to all and all to all personalized communication. Parallel programming Paradigm: Explicit versus implicit, shared address space versus Message Passing, data parallelism versus Control Parallelism; Introduction to Message passing Interface (MPI); Parallel Programming Using MPI; Performance and Scalability of Parallel Systems, Basic design techniques; Parallel Algorithms for matrix computation, sorting, graph algorithms, Mapping and scheduling.

MTL766 Multivariate Statistical Methods

3 credits (3-0-0)

Pre-requisites: MTL390/MTL601

Introduction to Multivariate data, Geometry of a sample, mean and Covariance, Generalized Variance; Sample value of Linear combination of variables; Multivariate Normal Distribution, and its properties, Sampling from a Multivariate Normal population, Sampling distribution and Large sample Behaviour of Mean and Covariance, Inference about Mean Vector, Hotelling's T-square and Likelihood Ratio test, Confidence Region, Comparison of several Multivariate Populations, Multivariate Linear Regression Models, Inferences about regression models and parameters, Model checking, Fisher's Discriminant Analysis, Fisher's Discriminant Analysis, Principal Component Analysis, Introduction to Factor Analysis, Orthogonal Factor Models, Factor Rotation, Strategy for Factor Analysis; Canonical Correlation Analysis, Interpreting population by Canonical variables, Large Sample Inferences.

MTL768 Graph Theory

3 credits (3-0-0)

Overlaps with: MTL776

Introduction to Graphs: Definition and basic concepts; Trees: characterizations, counting of minimum spanning tree; Paths and Distance in Graphs: Basic Definitions, center and median of a graph, activity digraph and critical path; Eulerian Graphs: Definition and Characterization; Hamiltonian Graphs: Necessary and sufficient conditions, Planar Graphs: properties, dual, genus of a graph; Graph Coloring: vertex coloring, chromatic polynomials, edge coloring, planar graph coloring; Matching and Factorizations: maximum matching in bipartite graphs, maximum matching in general graphs, Hall's marriage theorem, factorization; Networks: The Max-flow min-cut theorem, connectivity and edge connectivity, Menger's theorem; Graph and Matrices.

MTL770 Combinatorial Optimization

3 credits (3-0-0)

Pre-requisites: MTL103 and MTL342

Optimization problems, Convex sets and convex functions, Important combinatorial optimization problems, Convex hulls, Polytopes, Facets, Integral polytopes, Total Unimodularity, Total dual integrality, Background on Polytope and Linear programming; Matroids, Greedy algorithm, Properties, Axioms and constructions of matroids, Matroid

Intersection problem, Applications of matroid intersection, Weighted matroid intersection. Heuristics and analysis of heuristics, Min-cost Arborescences; Submodular flows and applications; Mader's T-path and A-path theorems; Multiflows, cut-condition, Okamura-Seymour theorem.

MTL773 Wavelets and Applications

3 credits (3-0-0)

Pre-requisites: MTL411/MAL602

Overlaps with: MAL890

Basic Fourier Analysis: Fourier Series, convergence of Fourier series, Riesz Fischer theorem, Fourier transform of square integrable functions, Plancherel formula, Poisson Summation formula, Shannon sampling theorem, Heisenberg Uncertainty principle. Continuous Wavelet transform, Plancherel formula, Inversion formulas. Frames, Riesz Systems, discrete wavelet transform, Numerical algorithms. Orthogonal bases of wavelets, multi resolution analysis, smoothness of wavelets, compactly supported wavelets, cardinal spline wavelets. Tensor products of wavelets, Decomposition and reconstruction algorithms for wavelets, wavelet packets, recent development and applications.

MTL775 Programming Languages

3 credits (3-0-0)

Pre-requisites: CSL204

Overlaps with: CSL302

Introduction to Programming Languages, syntax, semantics, reliability, efficiency and maintainability; Programming Fundamentals, Variables - values, referencing, run-time structures, dynamic allocation, typing, scoping, parameter passing; Lambda Calculus, concept and syntax, curried functions, reduction strategies, correlation with parameter passing; Introduction to Functional Programming, principles, syntax and semantics for LISP; Operational Semantics, specifying syntax, inference systems, structural induction, semantics of expression, semantic equivalence; Denotational Semantics, motivation, complete partial order, semantic functions, semantic equations, error handling; Domain Theory and Fixed Point Semantics, concepts, recursive definitions of function, elementary domains, product domains, sum domains, function domains; Introduction to Logic Programming - PROLOG.

MTL776 Graph Algorithms

3 credits (3-0-0)

Pre-requisites: CSL201

Overlaps with: MTL768, CSL851

Introduction to Graphs: Definition and basic concepts, Efficient representations of Graphs; Graph Searching: DFS and BFS; Application of Graph Searching: finding connected components, bi-connected components, testing for bipartiteness, finding cycle in graphs; Trees: Different MST algorithms, enumeration of all spanning trees of a graph; Paths and Distance in Graphs: Single source shortest path problem, All pairs shortest path problem, center and median of a graph, activity digraph and critical path; Hamiltonian Graphs: sufficient conditions for Hamiltonian graphs, traveling Salesman problem; Eulerian Graphs: characterization of Eulerian graphs, construction of Eulerian tour, The Chinese Postman problem; Planar Graphs: properties of planar graphs, planarity testing algorithm; Graph Coloring: vertex coloring, chromatic polynomials, edge coloring, planar graph coloring; Matching: maximum matching in bipartite graphs, maximum matching in general graphs; Networks: The Max-flow min-cut theorem, max-flow algorithm; NP-Complete Graph problems; Approximation algorithms for some NP-Hard graph problems; Algorithms for some NP-Hard graph problems on special graph classes.

MTL781 Finite Element Theory and Applications

3 credits (3-0-0)

Pre-requisites: MTL107/MTL509, MTL411/MTL602

Variational formulation of elliptic boundary value problems; Lax Milgram Lemma; Existence and uniqueness of solutions; equivalence of Galerkin and Ritz variational formulations; Triangulation of ordinary

domains-rectangles, polygons, circles, ellipses, etc. Finite element problems; conforming and non-conforming methods, Céa's Lemma, Interpolation on simplexes in R^n , different Lagrange and Hermite finite elements, Affine, isoparametric, sub-parametric, super parametric finite elements; Triangulation using isoparametric mapping; approximation of boundary; Numerical Integration, construction of element stiffness matrices and assembly into global stiffness matrix, Skyline method of solution of finite element equations; Solution of model problems and computer implementation procedures; Asymptotic error estimate results; Eigenvalue problems of Laplace operator.

MTL782 Data Mining

4 credits (3-0-2)

Pre-requisites: MTL342

Introduction to Data Mining, Data Cleaning and transformation, Data synchronization with operational databases, Association rule mining, Sequence analysis, mining complex data, Classification, knowledge Extraction and prediction, LIFT charts and ROC curves, Bagging and Boosting, Clustering techniques and application, Parallel and distributed data mining systems, data cubes and other visualizations.

MTL783 Theory of Computation

3 credits (3-0-0)

Pre-requisites: MTL342

Overlaps with: CSL705

Introduction to the Theory of Computation: Proof Techniques, Basic concepts of language, Grammar and Automata; Chomsky Hierarchy, Regular Languages, Finite automata, Equivalence, DFA and NFA, Minimization, Myhill-Nerode Theorem; Context Free Grammar, Pushdown Automata their equivalence and Application, Properties of Context-Free Languages; Turing Machine, Recursive and Recursively Enumerable Languages; Undecidability, Rice's Theorem, Post's Correspondence Problem, Complexity Theory, Intractable Problems.

MTL785 Natural Language Processing

3 credits (3-0-0)

Linguistic Essentials: Parts of speech and morphology, inflectinal versus derivational morphology, Phrase structure and link grammar, Syntax and syntactic theory, Semantics - semantic annotations, semantic similarity, Syntactic and semantic Ambiguity, Anaphora and cataphora - resolution. Study of Words: Frequency N-grams, Word alignment in parallel corpora - length based, word based, cognate based, Word Sense Disambiguation - Supervised, unsupervised Techniques, Grammar: Markov Models, POS tagging, Context Free Grammar, Parsing - example-based parsing, Study of Divergence, Applications: Machine Translation - Example Based, Rule Based, Statistical, Summarization - Word Space Model, Random Indexing, multi Document summarization, Information Retrieval - vector based, term distribution based, Sentiment Analysis.

MTV791 Special Module in Dynamical System

1 credit (1-0-0)

Basics - minimality, equicontinuity, recurrence, distality. Interplay of dynamical properties. Ergodicity. Symbolic dynamics. Relations arising from dynamical transformations and their Ellis semigroups. Entropy. Structure theorems. Decomposition theorems.

MTL792 Modern Methods in Partial Differential equations

3 credits (3-0-0)

Pre-requisites: MTL411/MTL602

Review of Lebesgue integration and Classical function spaces, Spaces of infinitely differentiable functions and Holder spaces. Sobolev spaces: L^p spaces, Weak derivatives, Sobolev spaces, approximation to identity, approximation with smooth functions, trace spaces, Sobolev and Poincare inequalities, compact embeddings and negative order Sobolev spaces. Second order elliptic equations: Weak solutions, Lax-Milgram Theorem, Energy estimates, Fredholm-alternative, Regularity of weak solutions, Maximum principles and eigenvalue problems. Mountain Pass lemma and applications. Hardy's inequalities and their

relation with Elliptic equations. Linear Evolution equations: Second order parabolic equations, existence and regularity of weak solutions, Maximum principles. Semi-group Theory: Generating, contraction semi-groups and applications.

MTL793 Numerical Methods for Hyperbolic PDEs

3 credits (3-0-0)

Scalar conservation laws: Method of characteristics, Shocks, Rarefactions, weak and entropy solutions, existence and uniqueness results, Finite volume schemes, Riemann solvers, Convergence of first order schemes. Higher-order schemes: Lax-Wendroff, TVD schemes, Limiters, ENO schemes, Higher order Runge-Kutta methods. Linear systems: Exact solutions, First- and higher-order finite volume schemes. Non-linear Systems: Solutions of Riemann problems, First-Order finite volume schemes for systems. Higher-order schemes for systems: TVD Limiters. Finite-volume schemes on unstructured meshes. Hyperbolic systems with source term.

MTL794 Advanced Probability Theory

3 credits (3-0-0)

Pre-requisites: MTL106/MTL601

Notions of Stochastic Convergence and Related Convergence Theorems, Uniform Integrability, Weak and Strong Laws of Large Numbers, Speed of Convergence in the Strong Laws of Large Numbers, Martingales, Processes, Filtrations, Stopping Times, Discrete Stochastic Integral, Martingale Convergence Theorems and Their Applications, Levy's Continuity Theorem and Various Versions of Central Limit Theorem, Markov Chains, Discrete Markov Chains, Convergence of Markov Chains, Applications of Probability Theory to Fourier Series-Examples.

MTL795 Numerical Method for Partial Differential Equations

4 credits (3-1-0)

Two point boundary value problem: Variational approach, Discretization and convergence of numerical schemes. Second order Elliptic boundary value problem, Variational formulation and Boundary conditions, Finite element Methods, Galerkin Discretization, Implementation, Finite difference and Finite volume methods, Convergence and Accuracy.

Parabolic initial value problems, Heat equations, variational formulation, Method of lines, Convergence.

Wave Equations, Method of lines, Timestepping.

MAL803 Pattern Recognition

3 credits (3-0-0)

Statistical and geometrical techniques of pattern recognition, classification and cluster analysis, linear discrimination analysis and feature extraction theory. Application of entropy principles and mathematical programming techniques to pattern recognition. Fuzzy theoretic approach to pattern recognition.

MAL805 Mathematical Modelling and Computer Simulation

3 credits (3-0-0)

Modelling of non-linear transport process in the context of urban air pollution and dispersion of suspended matter in waterways; large-scale motions in the atmosphere and oceans; humidity transport equations; models in population ecology, predator-prey interactions models of renewable resource harvesting; case studies and computer simulation.

MAL807 Compiler Construction

3 credits (3-0-0)

Compilers and translators. Structure of a compiler. Lexical analysis and syntax analysis. LL and LR parsing techniques and parser generators. Symbol tables. Internal form of source programs. Semantic routines. Error detection and recovery code generation. Code optimization.

MAL809 Numerical Software

3 credits (3-0-0)

Concept of a software library; design principles. Numerical library for a large industrial organization : using the NAG library in industrial

research. Linear and non-linear algebra : singular-value decomposition, software for sparse matrices, non-linear algebraic equations in process engineering calculations, data fitting algorithms. Differential and integral equations; solution of large systems, stiff initial-value problems, efficiency of stiff integration routines, numerical software for integral equations, problem of algorithm design for PDEs. Optimization : mathematical programming systems.

MAL811 Mathematical Foundation of Artificial Intelligence

3 credits (3-0-0)

Knowledge Base as conventional and non-conventional logics, the basic problems of incompleteness, inconsistency, non-monotonicity, inaccuracy, uncertainty and imprecision in representation of a knowledge-base. Deduction and computation : the inference systems, arities, sorts and many-sorted algebras, polymorphisms. The categorical formulation. Confluence and termination, Knuth-Benedix method. The Church- Rosser property and sequential computation. Logic programming, PROLOG and other logic programming languages. Functional programming.

MAL819 Statistical Simulation on Computers

3 credits (3-0-0)

Random number generation tests for randomness, random variate generation, rejection principle, composition, variance reduction techniques, simulation from multivariate distributions. Analysis of simulation with general purpose languages. A minor application.

MAL823 Special Topics in Computer Applications

3 credits (3-0-0)

MAL843 Mathematical Modeling of Credit Risk

3 credits (3-0-0)

Review of elementary stochastic calculus and Black - Scholes - Merton theory of option pricing. Corporate liabilities and contingent claims. Risk structure of interest rates. Statistical techniques for analyzing defaults. Credit scoring modeling using logistic regression, Discriminant Analysis and support vector machines. Rating based term structure models. Credit risk and interest rate swaps. Credit default swaps (CDS), collateralized debt obligations (CDO's) and other related products. The copula approach. Portfolio credit risk analysis using coherent risk measures.

MAL851 Applied Numerical Analysis

3 credits (3-0-0)

Error analysis and stability of algorithms. Nonlinear equations: Newton Raphson method, Muller's method, criterion for acceptance of a root, system of non-linear equations. Roots of polynomial equations. Linear system of algebraic equations : Gauss elimination method, LU-decomposition method; matrix inversion, iterative methods, ill- conditioned systems. Eigenvalue problems : Jacobi, Given's and Householder's methods for symmetric matrices, Rutishauser method for general matrices, Power and inverse power methods. Interpolation and approximation : Newton's, Lagrange and Hermite interpolating polynomials, cubic splines; least square and minimax approximations.

Numerical differentiation and integration: Newton-Cotes and Gaussian type quadrature methods.

Ordinary differential equations : Initial value problems: single step and multistep methods, stability and their convergence. Boundary value problems: Shooting and difference methods.

Partial Differential Equations : Difference methods for solution of parabolic and hyperbolic equations in one and two-space dimensions, stability and their convergence, difference methods for elliptic equations.

MTD851 Major Project Part-I

6 credits (0-0-12)

MTD852 Major Project Part-II

12 credits (0-0-24)

Review of Normed Linear spaces, Banach spaces and Hilbert spaces.

Weak and weak* convergence, Spectrum of Bounded Linear operators.

Browder and Schauder fixed point theorems and applications to Differential and integral equations, L^p spaces.

Distributions and Fourier transforms: Schwartz space, tempered distributions, Fourier transform of tempered distributions, Fourier transform of L^p functions and applications.

Sobolev spaces: Density, embedding and extension theorems.

Differential Calculus: Derivatives of maps on Banach spaces, inverse and implicit function theorems, Direct methods of Calculus of variations and applications.

MAL854 Interpolation and Approximation

3 credits (3-0-0)

Interpolation : general problem, representation theorems, remainder theory, convergence of interpolatory processes. Approximation : best, uniform and least-squares, degree of approximation. Approximation of linear functionals : Optimal approximations in Hilbert spaces, roots and extremals : Convergence of Newton's method in Banach spaces, minimizing functionals on normed linear spaces, applications to integral equations and control theory.

Splines : applications to computer-aided design.

Filters : linear, least-squares and Chebyshev.

Applications to signal processing.

MAL855 Multiple Decision Procedures in Ranking and Selection

3 credits (3-0-0)

The problem of ranking and selection, different approaches to the solution of problem. Indifference zone formulation : Ranking normal population in terms of means single and two stage procedures. Ranking normal population in terms of variances. Ranking binomial population-fixed sample size and multistage procedures, play the winner rules and vector at a time sampling. Ranking Gamma population with largest (smallest) scale parameter. Optimal properties of fixed subset size procedures Bayes, minimax and admissibilities properties, subset selection formulation : Decision theoretical formulation, best invariant rules. Restricted subset selection. Subset selection of normal population w.r.t. means and variances, selection of t-best. Subset selection in binomial and gamma populations. Comparison of population with a control. Normal and exponential populations.

MAL856 Lie Algebras

3 credits (3-0-0)

Definitions and examples. Basic concepts. Solvable and Nilpotent Lie algebras, The Engel's theorem, Lie's theorem, Cartan's criterion, Killing form, Finite dimensional semi-simple Lie algebras and their representation theory. The Weyl's theorem. Representations of $sl(2, \mathbb{C})$. Root space decomposition. Rationality properties. Root systems, The Weyl group. Isomorphism and conjugacy theorems (Cartan subalgebras, Borel subalgebras). Universal enveloping algebras, PBW theorem, Serre's theorem. Representation theory and characters. Formulas of Weyl, Kostant and Steinberg. Introduction to infinite dimensional Lie algebras.

MAL860 Linear Algebra

3 credits (3-0-0)

Vector spaces, linear transformations, Eigenvalues and eigenvectors, Diagonalization, Simultaneous triangulation and diagonalization. The primary decomposition theorem. Cyclic decomposition and the rational and Jordan canonical forms. Computation of invariant factors. Inner product spaces, unitary operators, spectral theorem for normal operators, polar decomposition. Bilinear and quadratic forms, Symmetric and Skew-symmetric bilinear forms. Non-negative matrices, Perron-Frobenius theory, generalized inverse of a matrix.

MAL863 Algebraic Number Theory

3 credits (3-0-0)

Algebraic number fields, cyclotomic fields, quadratic and cubic fields, integral extensions, conjugate elements and conjugate fields, norms and traces. The discriminant. Noetherian rings and Dedekind domains. Finiteness of the class group. Dirichlet's unit theorem and

its applications.

MAL874 Analysis

3 credits (3-0-0)

Review of Banach and Hilbert spaces. The Hahn-Banach, Open mapping and Banach-Steinhaus theorems. The Riesz representation theorem, the spaces $L_p(0,1)$ and $L_2(0,1)$ Spectral theory and Sturm-Liouville systems, fixed point theory. The theorems by Banach, Browder and Schauder and applications. Picard's theorem. Integral equation of Fredholm, Volterra and Hammerstein. Nonlinear operators : The complementarity problem and its uses. Banach algebras and C^* algebras. Best approximation in normed linear spaces.

MAL883 Physical Fluid Mechanics

3 credits (3-0-0)

Description of principles of flow phenomena : pipe and channel flow laminar flow, transition, turbulence; flow past an object; boundary layer, wake, separation, vortices, drag, convection in horizontal layers, transition from periodic to chaotic behaviour; equations of motion; dynamical scaling, sample viscous flows; inviscid flows. Flow in rotating fluids; hydrodynamic stability.

MAL888 Boundary Elements Methods with Computer Implementation

3 credits (3-0-0)

Distributions and Sobolev spaces of fractional order. Elliptic boundary value problems on unbounded domains in \mathbb{R}^n ($n=2,3$).

Fundamental solution of elliptic equations.

Simple layer and double layer potentials Fredholm integral equations of first and second kinds. Singular and hypersingular kernels.

Interior and exterior Dirichlet problems and integral representations of their solutions.

Variational formulation of problems defined on boundary. Solution of some model problems by boundary element methods, approximate integrations over boundary, solution methods of algebraic equations; computer implementation of boundary element methods for a model problem. Coupling of boundary element and finite element methods.

Some advanced topics of boundary integral methods integrals with hypersingular kernel, a method of elimination of singularity, Lagrange multiplier method.

MAL890 Wavelet Analysis and Applications

3 credits (3-0-0)

Integral Wavelet Transform. Wavelet frames. Orthonormal wavelet basis. Multiresolution analysis. Compactly supported wavelets. Cardinal spline wavelets. Fast wavelet transform, Numerical Algorithms.

MAL899 Selected Topics (Self-study)

3 credits (3-0-0)

Department of Mechanical Engineering

MCP100 Introduction to Engineering Visualization

2 credits (0-0-4)

Prerequisite(s): Nil

Sketching of engineering objects and interpretation of drawings as a visualisation and communication tool. Creating 3D components through the use of a CAD package. Simple assemblies, generation of assembly views from part drawings, animation of simple assemblies.

MCP101 Product Realization through Manufacturing

2 credits (0-0-4)

Prerequisite(s): Nil

Exposing role of manufacturing processes in product realization; Understanding product realization by endeavouring hands on activities;

Experience of product realization by undertaking manufacturing exercises and assembly activity in teams.

MCL111 Kinematics and Dynamics of Machines

4 credits (3-0-2)

Pre-requisites: APL100

Kinematic pairs, Kinematic diagram and inversions. Mobility and range of movements. Displacement, velocity and acceleration analysis of planar linkages, graphical and analytical methods. Dimensional synthesis for motion, function and path generation. Force analysis of planar mechanisms. Cam profile synthesis, graphical and analytical method. Gear tooth profile, interference in gears. Gear types, gear trains including compound epicyclic gears. Design of flywheel and governors. Inertia forces and their balancing for rotating and reciprocating machines.

Free and forced vibration of SDOF system. Introduction to 2 DOF systems, vibration absorbers.

MCL131 Manufacturing Processes-I

3 credits (3-0-0)

Pre-requisites: MCP101

Overlaps with: With three core courses of ME2 (30% each)

CASTING: Sand casting, Gating system and its design, Riser design and its placement, Melting, Pouring and Fluidity, Solidification of pure metals and alloys, Casting defects, Inspection and testing. Other casting processes, advantages and applications.

WELDING: Shielded metal arc welding, other arc welding processes like TIG, MIG and SAW processes, Types of metal transfer in arc welding, Gas welding and Gas cutting, Resistance welding, Solid state welding processes, Brazing, Soldering and their applications, Surfacing and its applications.

FORMING: Plastic deformation of metals, stress-strain relationships, Yield criteria, Hot working and Cold working, Friction and lubrication in metal working, Analysis of bulk forming and sheet metal forming processes. Unconventional forming processes.

Powder Metallurgy: Powder production methods, compaction and sintering. Applications of powder metallurgy.

MCL132 Metal Forming and Press Tools

3 credits (3-0-0)

Prerequisite(s): MCP101

Overlaps with: 30% with MCL131

Mechanical behaviour of metals and alloys in plastic deformation, Stress-strain relationships, Yield criteria, Fundamentals of plasticity, Tensile properties, Flow stress and flow curves, Fundamentals of metal forming processes, Strain rate and temperature in metal working, Hot working, Cold working and annealing, Analysis of forming processes like forging, rolling, extrusion, wire drawing and sheet metal forming by slab method, Equipment and tools used in metal forming operations, Types of presses, different types of dies and their design aspects, Unconventional forming processes.

MCL133 Near Net Shape Manufacturing

3 credits (3-0-0)

Pre-requisites: MCP101

Introduction and fundamentals of Casting of complicated shapes: automotive components, casting of light alloys – Aluminum, Magnesium and Titanium alloys.

Injection moulding: Thermoplastics, thermoset plastics and composites – processing methodologies.

Powder Metallurgy: fabrication routes, powder size determination – micro and nano level, powder consolidation routes, compacting, sintering, hot pressing, sintering, hot iso static pressing, field assisted sintering technologies.

Advances in near net shape manufacturing: Metal Injection moulding, Laser engineered net shaping.

MCL134 Metrology and Quality Assurance

3.5 credits (3-0-1)

Prerequisite(s): MCP101

Overlaps with: MCL231

Introduction to Metrology and its relevance, standardization, dimensional measurement, limits, fits and tolerances, limit gauging, linear and angular measurements and their applications, surface roughness-quantification & measurement, Feature Inspection, Online inspection, Calibration.

Introduction to Quality Assurance and Quality Control, Various elements in Quality Assurance, On-line and Off-line quality control, Statistical concepts in quality, Central limit theorem, Quality Characteristics, QC Tools. Process capability studies, Remedial / Corrective actions.

Design of sampling plans, Economics of product inspection, Quality costs, Problems and illustrations in Quality Assurance.

MCL135 Welding and Allied Processes

3 credits (3-0-0)

Prerequisite(s): MCP101

Principles of arc welding, basic physics of arc and flame, Gas welding and Gas cutting, manual metal arc welding, GTAW, GMAW. Metal transfer mechanisms in arc welding, Weld bead characterization, Electrode and electrodeless welding, Resistance welding, Heat flow characteristics and metallurgical changes in fusion welding, Solid state welding processes, Radiant energy welding processes, Brazing, Soldering and their applications, Joint design, welding symbols and Joint evaluation through destructive and non destructive testing methods, welding defects, causes and remedies, residual stress and distortion. Plasma cutting, surfacing and plasma spray forming, surfacing applications. Advances in welding.

MCL136 Material Removal Processes

3 credits (3-0-0)

Prerequisite(s): MCP101

Introduction to various material removal processes, Nomenclature and geometry of cutting tools, Mechanics of Conventional and Non Conventional Machining including force, temperature, surface integrity. Methods of measurement of forces, temperature and surface finish (experimentally and analytically), Tool wear mechanisms and tool life criteria, Basic concepts of cost and economics of machining.

Various types of machine tools and their structures, Workholding and tool holding devices for machine tools.

Ultraprecision machining and grinding methods and the machine tools used for such processes. Manufacturing of micro tools, Nano-finishing of materials using advanced machining methods.

MCL136 Material Removal Processes

3 credits (3-0-0)

Pre-requisites: MCP101

Introduction to various material removal processes, Nomenclature and geometry of cutting tools, Mechanics of Conventional and Non

Conventional Machining including force, temperature, surface integrity. Methods of measurement of forces, temperature and surface finish (experimentally and analytically), Tool wear mechanisms and tool life criteria, Basic concepts of cost and economics of machining.

Various types of machine tools and their structures, Workholding and tool holding devices for machine tools.

Ultraprecision machining and grinding methods and the machine tools used for such processes. Manufacturing of micro tools, Nano-finishing of materials using advanced machining methods.

MCL140 Engineering Thermodynamics

4 credits (3-1-0)

Prerequisite(s): Nil

Introduction: microscopic and macroscopic points of view. Basic concepts and definitions – system, boundary, equilibrium, steady state, zeroth law, temperature scale. Work and heat – definition and applications; various forms of work. Thermodynamic properties of a pure substance – saturated and other states, real gases, compressibility chart. The First Law of Thermodynamics for control mass/ volume, Internal Energy, Enthalpy, The SSSF and USUF Processes. Second Law – corollaries, Carnot cycle. Clausius inequality, entropy. Irreversibility and exergy analysis. Thermodynamic Relations. Vapor power cycles – Rankine cycle and its modifications. Brayton/ Otto/ Dual cycles. Vapor compression refrigeration cycle. Thermodynamics of non-reacting mixtures, psychrometry.

MCL141 Thermal Science for Manufacturing

4 credits (3-1-0)

Overlaps with: MCL140, MCL242 (50%), CLL110 (50%)

Overview and the importance of the knowledge of thermal science in manufacturing processes. Basics of thermodynamics: closed and open systems, work and heat. First law of thermodynamics for control mass and control volume. Second law of thermodynamics. Irreversibilities and examples of irreversibilities in manufacturing.

Introduction to transport phenomena : various modes of transport of momentum, energy and mass- diffusion and advective transport. Convective heat and mass transfer - Concept of momentum, thermal and concentration boundary layers; relevant correlations. Radiation heat transfer. Blackbody radiation. Gray and diffuse surfaces. Surface radiation. Case studies of manufacturing processes involving application of the above concepts.

MCL142 Thermal Science for Electrical Engineers

3 credits (3-0-0)

Prerequisite(s): Nil

Overlaps with: MCL140, MCL141, CLL121

Introduction to applications. Basic concepts and definitions – system, boundary, equilibrium, steady state and others. Thermodynamic properties of a pure substance – saturated and other states. Work and heat – definition and applications. 1st Law – internal energy and enthalpy, applications to non-flow/closed and flow/open systems (SSSF and USUF). 2nd Law – corollaries, Clausius inequality, entropy. Carnot cycle. Basics of gas-vapor mixtures. Vapor power cycles – Rankine cycle and its modifications. Steam generation and its use – power plants, co-generation, combined cycles. Introduction to various equipment in thermal power plant.

Introduction to transport phenomena: various modes of transport of momentum and energy - diffusion and advective transport. Modes of heat transfer in various applications. Conduction: Heat diffusion equation, 1-D steady state conduction in extended surfaces, infinite and semi-infinite walls, heat generation, lumped capacitance. Convection: Forced and free convection - mass, momentum and energy conservation equations, non-dimensional numbers, hydrodynamic and thermal boundary layers, basics of heat transfer in external and internal laminar and turbulent flows, and use of co-relations. Radiation: properties, Laws, 3-surface network for diffuse-gray surfaces. Familiarization with heat exchangers. Application area example: cooling of electronics.

MCL201 Mechanical Engineering Drawing

3.5 credits (2-0-3)

Prerequisite(s): MCP100

Introduction to generation of drawings as a design process for machine assembly. Use of datum planes to locate features and machine elements uniquely in assemblies.

Sectioning, dimensioning, notes and version control in drawings.

Standardized representation of threads, fasteners, welds, bearings, springs and related components.

Introduction to limits, fits and tolerances, dimensional and geometric tolerances, surface finish symbols.

Generation of assembly drawings including sectioning and bill of materials.

Evolving details of components from assembly considerations. Detailing of components involving shafts, bearing, pulleys, gears, belts, brackets for assembly.

Solid modeling of above assembly and incorporating assembly constraints for animation of motion of machine assemblies.

MCL211 Design of Machines

4 credits (3-0-2)

Prerequisite(s): APL104, MCL100, MCL201

Conceptualization of a machine in terms of geometrical requirements specified in terms of functional degrees of freedom, degrees of constraints and stiffness. Synthesis of an assembly from machine components to meet the functional requirements. Sizing machine components and selecting material through use of free body diagrams, failure theories in static and repeated loading. Design and selection of certain machine elements (i.e. cams, gears, belt-pulleys, bearings, springs, shaft/axle, plates, nuts and bolts, brake/clutch) as exemplars. Case studies (like Gearbox driven by motor using belt drive) through use of parametric software to carry out iteration in the design space.

MCL212 Control theory and applications

4 credits (3-0-2)

Prerequisite(s): MTL100, MTL101

Overlaps with: 50-60% with ELL301 and CLL261

Introduction; Fourier and Laplace transforms; Mathematical Modeling of simple physical systems; Transfer function; Block diagrams; Signal flow graph; Transient response analysis using Laplace transform; Frequency response; Design/performance specifications in time and frequency domain; Steady state error and error constants;

Proportional, integral, derivative, PD and PID control; Sensors and actuators for temperature, pressure, flow and motion control systems; Realization of standard controllers using hydraulic, pneumatic, electronic, electro-hydraulic and electro-pneumatic systems;

Stability; Routh's criterion; Nyquist stability criterion, Bode plots; Control system design using Root Locus and Frequency response; Lead and lag compensation; Gain margin, Phase margin; Introduction to Modern control: State space representation; Control with state feedback; Review of applications of control in: Machine tools, Aerospace, Boiler, Engine Governing, Active vibration control.

MCL231 Manufacturing Processes-II

3 credits (3-0-0)

Prerequisite(s): MCL131

Overlaps with: MCL134, MCL136

Introduction to Metal Machining and Machine Tools, Geometry of cutting tools, Mechanics of Machining including force and temperature generation, Methods of measurement of forces and temperature (experimentally and analytically), Tool wear mechanisms and tool life criteria, Basic concepts of cost and economics of machining.

Various types of machine tools and their development with regard to productivity & accuracy requirements, Workholding and tool holding devices for machine tools.

Introduction to non conventional machining processes and understanding basic mechanisms of material removal in such processes

Introduction to metrology, Dimensional Inspection, Inspection by measurement, Limit gauging, Design of Limit gauges, Surface quality inspection, Feature inspection.

MCP231 Manufacturing Laboratory-I

1 credit (0-0-2)

Prerequisite(s): MCL131

Overlaps with: MCP232 (60%)

Experiments on casting, joining, forming, injection molding and powder metallurgical processes.

MCP232 Production Engineering Laboratory-I

1 credit (0-0-2)

Prerequisite(s): MCL132, MCL133, MCL134

Overlaps with: MCP231 (60%)

Experiments on casting, forming, injection molding and powder metallurgical processes.

MCL241 Energy systems and Technologies

4 credits (3-0.5-1)

Prerequisite(s): MCL140

Overlaps with: ESL714 (>50%)

Energy sources :

Fuels : Fossil fuels, Nuclear fuels, Direct Solar, Indirect solar - Biomass, Ocean, Tidal, Hydro, Wind etc. Energy demand/ Growth/ economics; Fuel upgradation: gasification of coal and biomass; biogas

Energy conversion: Direct Conversion: Solar PV, Fuel Cells, Thermoelectric Conversion. Thermal to electric: IC Engines, Gas and Steam Turbines; Electromechanical conversion; Hydraulic turbines. Chemical to Thermal: Combustion and stoichiometry.

Energy utilization : Refrigeration, HVAC, Desalination, Polygeneration; pumps and compressors

Energy storage : Thermal/ Mechanical/ Electric/ Chemical

Environmental Impact : Air/ water/ soil / nuclear waste.

MCL242 Heat and Mass Transfer

4 credits (3-1-0)

Pre-requisites: MCL140 & APL106

Overlaps with: CLL251

Modes of heat transfer, energy carriers and continuum approximation. Mechanisms of mass transfer. Unified view of momentum, heat and mass transfer.

Conduction: Fourier's law, heat diffusion equation, 1-D steady state conduction in extended surfaces, heat generation, lumped capacitance and 1D transient models, semi-infinite wall. Diffusion mass transfer in 1D: steady state and transient.

Convection: Forced and free convection - mass, momentum and energy conservation equations, scaling analysis and significance of non-dimensional numbers, thermal boundary layers, heat transfer in external and internal laminar and turbulent flows, and use of correlations. Convective mass transfer. Boiling and condensation: physical phenomena and correlations.

Heat exchanger types and analysis: LMTD and effectiveness-NTU method.

Radiation: properties, Laws, view factor, 3-surface network for diffuse-gray surfaces. Gas radiation.

MCL261 Introduction to Operations Research

3 credits (3-0-0)

Prerequisite(s): MTL108

Introduction to Modeling, Linear Programming - Formulation, Solution methods including Simplex, Primal-Dual, Integer Programming-Formulation, Solution methods, Introduction to Dynamic Programming, Software Tools and Case Studies.

MCP261 Industrial Engineering Laboratory-I

1 credit (0-0-2)

Prerequisite(s): MCL261, MCL262

Deterministic optimization problem formulation, solution using CPLEX, sensitivity analysis; Conceptualization/Visualization of problem situation, formulation of simulation model, simulation runs and output analysis.

MCL262 Stochastic Modelling and Simulation

3 credits (3-0-0)

Prerequisite(s): MTL108

Overlaps with: Nil

Overview of Probability Basics, Introduction to Discrete Time Markov Chains (DTMC), Transient and Limiting analysis of DTMC, Introduction to Continuous Time Markov Chains (CTMC), Transient and Limiting analysis of DTMC, Applications, Discrete Event Simulation-Introduction, Generation of Random Variables, Simulation modeling through case studies.

MCP301 Mechanical Engineering Laboratory-I

1.5 credits (0-0-3)

Prerequisite(s): APL104, APL106, MCL111, MCL140, MCL241

Experiments pertaining to applications of the concepts learnt in the theory courses of Fluid Mech, Solid Mech, Thermodynamics, Kinematics and dynamics and Energy Systems.

MCL311 CAD and Finite Element Analysis

4 credits (3-0-2)

Prerequisite(s): APL104, MCL211

Overlaps with: AML705, 706, 710 (course should be mutually exclusive w.r.t these courses)

Introduction and overview. Need and Scope of Computer Aided Machine Design. Role of Geometric Modelling, FE and Optimization; 2D and 3D Geometric transformations and projections. The Viewing pipeline; Geometric modeling; Modelling of curves, cubics, splines, beziers and b-splines, NURBS;

Modeling of surfaces; Modeling of solids-b-rep, CSG, octree, feature based modeling; Introduction to the Finite Element Method, principle of potential energy; 1D elements, Derivation of Stiffness and Mass matrices for a bar, a beam and a shaft, FEA using 2D and 3D elements; Plain strain and plain stress problems, plates / shell elements; Importance of Finite element mesh, Automatic meshing techniques; Interfacing with CAD software.

Introduction to Thermal analysis, Dynamic analysis using eigen values, and Non linear analysis; Limitations of FEM.

MCL314 Acoustics and Noise Control

4 credits (3-0-2)

Prerequisite(s): APL100

Overlaps with: MEL733 (20%), MEL746 (50%), ITL 760 (60%)

Fundamentals of acoustics, Reflection and transmission of waves, Sound sources and generation mechanisms, Human physiological response to noise, Sound measurement, Sound in enclosed spaces, Sound absorption, Acoustic enclosures and barriers, Sound propagation in ducts, Vibration control, Active noise control, Overview of Numerical acoustics.

MCL321 Automotive Systems

4 credits (3-0-2)

Overlaps with: MEL311 (10%),

Review of basic engine management systems, alternative fuel systems, fuel ignition systems, hybrid electric vehicles, exhaust emission systems, drivetrain systems, chassis, environmental management and service information systems. Introduction of torque converters, planetary gears, clutches, differentials, all-wheel drive, heating and air conditioning systems, and interaction of tyre and road interface. History of engine technology. Detail of starting and charging systems. Details of steering and suspension systems. Details of bearing and lubrication systems.

MCL322 Power Train Design

3 credits (3-0-0)

*Prerequisite(s): MCL211**Overlaps with: MEL311 (10%)*

Introduction of components of automotive powertrain system, viz., engines, transmission, clutches and brakes. Engine characteristics. Throttle system, Turbochargers, History and design of valve train. Design of variable valve timing system, Exhaust gas recirculation. Materials in powertrain components. Lubrication systems to minimize life cycle costs. Modelling and design of gearbox. Role of control system in advanced (i.e. direct injection, active boosting, camless) powertrain system.

MCL330 Special Topics Production Engg

3 credits (3-0-0)

Prerequisite(s): To be defined by the course coordinator at the time of offering the course if required

Specialized topics in Production Engineering. The detailed contents will be decided by the faculty who will reach the course.

MCL331 Micro and Nano Manufacturing

3 credits (3-0-0)

*Prerequisite(s): for ME1: MCL131, MCL231**for ME2: MCL136**Overlaps with: Nil*

An overview of micro and nano mechanical systems and their applications in Mechanical Engineering, MEMS Microfabrication methods, Silicon Micromachining methods, Laser/Electron and Ion beam micromachining methods, Mechanical Micromachining techniques, Nanomanufacturing methods, nanomaterials and nano metrology.

MCP331 Manufacturing Laboratory-II

1 credit (0-0-2)

*Prerequisite(s): for ME1: MCL131, MCL231**for ME2: MCL136*

Experiments on machining and metrology.

MCP332 Production Engineering Laboratory-II

1 credit (0-0-2)

Prerequisite(s): MCL135, MCL136, MCP232

Experiments on machining and welding processes.

MCL334 Industrial Automation

4 credits (3-0-2)

*Prerequisite(s): ELL100 and APL106 or MCL141**Overlaps with: 5% with MEL312*

Introduction to Automation technologies, applications around us and in manufacturing. Types of systems - mechanical, electrical, electronics; Sensors, Factory Automation Sensors, Electrical sensors, Process Automation Sensors and their interfaces; Hydraulics & Pneumatic Systems and components; Circuit design approach and examples; Sequence operation of more than two cylinders and motors; Electro

Pneumatic & Electro Hydraulic Systems, Relay Logic circuits, Feedback control systems; Programmable Logic Controllers, programming languages & instruction set, ladder logic, functional blocks, structured text, and applications. Human Machine Interface & SCADA; Motion controller, stepper & servo motors, multi axes coordinated motion, CNC control; RFID technology and its application; Machine vision and control applications.

Laboratory work will be hands-on design and operation of automatic systems.

MCL336 Advances in Welding

4 credits (3-0-2)

Prerequisite(s): MCL131 or MCL135

Introduction to joining technology, General survey and classification of Welding processes, importance of advanced materials and joining technologies, welding technologies related to industries: automotive, aerospace, nuclear, oil and gas industries.

MCL337 Advanced Machining Processes

3 credits (3-0-0)

*Prerequisites: MCL231 or MCL136**Overlaps with: ~20% overlap with MCL231 and MCL136*

Introduction to advanced machining processes – need for such processes and application areas; Mechanical Energy utilized advanced machining processes like ultrasonic machining, abrasive flow machining, magnetic abrasive finishing, magneto-rheological finishing, abrasive water jet machining – mechanics of cutting, process parametric analysis, process capabilities, applications; Thermoelectric based advanced machining processes like electro discharge machining, wire EDM, Plasma Arc Machining, Laser Beam Machining, Focused Ion Beam Machining – working principles, material removal mechanisms, process capabilities and applications; Electrochemical and Chemical Advanced Machining – ECG, Electro stream Drilling, Chemical Machining – process characteristics, numerical modelling of the processes, applications and limitations.

MCL338 Mechatronic Applications in Manufacturing

4 credits (3-0-2)

*Prerequisite(s): ELL100**Overlaps with: MEL749, EEL482*

Introduction to mechatronic systems and components, Review of manufacturing and need and integration of mechatronics at different levels, Principles of basic electronics, Digital electronics review: number system, gates, flip-flops, counters, registers, tri-state concept, TTL and CMOS circuits, memories. Embedded electronics, Basics of Microcontroller & Microprocessors architecture and instruction set, machine cycles, interrupts, instruction set, memory and I/O interfacing, programming techniques, Timer/Counters, Serial Interfacing and communications, Interfacing to keyboards and displays, Standard busses. Microcontrollers and their applications, integrated circuits, sensors, actuators, and other electrical/electronic hardware in mechatronic systems. Microprocessor based measurement and control: D/A and A/D conversion, data acquisition systems, encoders, interfacing of motors and transducers. Selection of mechatronic components, namely sensors like encoders and resolvers. Stepper and servomotors; Solenoid like actuators; Transmission elements like Ball screw and Controllers. Analysis of mechatronic systems with applications to motion control, robotics, CNC systems, and others. Case studies of applications in process and discrete manufacturing.

Laboratory work will be hands-on Microcontroller & Microprocessor interfacing and programming, Motion controller, motors, sensors, and actuators.

MCL341 Gas Dynamics and Propulsion

4 credits (3-0-2)

Prerequisite(s): MCL140 & MCL241

Revision of fundamentals. Thermodynamics of compressible flow – wave motion in compressible medium, Mach number and cone.

Steady one-dimensional compressible flow through variable area ducts. Converging and converging-diverging nozzles and diffusers. Effects of heating and friction in duct flow, Rayleigh and Fanno lines. Flows with normal shocks. Oblique shocks and reflection. Expansion waves. Prandtl-Meyer flow. Flow over bodies. Measurements and applications. Jet propulsion – types of engines, propulsion fundamentals. Compressor, combustor and turbines construction and performance. Rocket propulsion – basics, solid and liquid propelled engines, parametric studies, construction features, single and multi-stage rockets. Thrust chamber and nozzle models. Studies of in-use engines. Environmental aspects.

MCL343 Introduction to Combustion

3 credits (3-0-0)

Prerequisite(s): (MCL140 and MCL242) or MCL141

Introduction. Fuels: gaseous, liquid and solid. Physical and chemical characterizations. Chemical thermodynamics and kinetics. Conservation equations for multi-component systems. Premixed systems: laminar flame problems and effects of different variables. Measurement of flame speed. Flammability limits. Ignition and quenching. Turbulent premixed flames. Non-premixed systems: laminar diffusion flamejet, droplet burning. Combustion of solids: drying, devolatilization and char combustion. Biomass combustion devices. Coal combustion. Pollution: Main pollutants and their environmental impact. NO_x, CO and SO_x formation chemistry. Particulate pollutants. Emissions from engines, power plants and industrial applications. Low NO_x burners and furnace design.

MCL344 Refrigeration and Air-conditioning

4 credits (3-0-2)

Prerequisite(s): (MCL140 and MCL242) or MCL141

Overlaps with: ESL850

Introduction and applications, recapitulation of fundamentals. Vapor compression systems: Ideal and real cycle analyses, Refrigerants: designation, desirable properties, environmental considerations. Advanced vapor compression cycles. Components: condensers, evaporators, compressors and expansion devices – construction, operation and performance. Vapor absorption and gas cycle refrigeration. Psychrometry. Processes - heating, humidification, cooling and dehumidification etc. Air-conditioning calculations, Cooling load estimation.

MCL345 Reciprocating Internal Combustion Engines

4 credits (3-0-2)

Prerequisite(s): MCL140 or MCL141

Overlaps with: <10% with PG I.C. Engine course

Introduction, Engine design and operating parameters, Ideal properties, Models of engine processes and cycles, combustion thermodynamics, fuel/air cycle analysis, Spark-Ignition engine combustion, SI and Diesel engine emissions, IC Engines: the future.

MCL347 Intermediate Heat Transfer

3 credits (3-0-0)

Prerequisite(s): MTL100, MTL101, MCL242

Overlaps with: MCL441 (~20%)

Heat conduction: Governing equation, Analytical solution of steady and unsteady 2D heat conduction, Heat transfer from convective radiative fins; Convection: Governing equations, Forced convection heat transfer, scale analysis, similarity solutions and momentum integral method for laminar flows, energy integral method for turbulent flows; Natural convection: similarity solutions and energy integral methods, mixed convection; Heat transfer from pipes: analytical solutions; Heat transfer at high speed; Radiative heat transfer: blackbody radiation, radiative heat transfer between gray, diffusive surfaces, radiative heat exchange between non-gray surfaces, gas radiation, enclosure theory, governing equation for radiatively participating medium. Boiling: pool boiling, development of a correlation for nucleate boiling, critical heat flux, flow boiling. Condensation: film condensation over flat and circular geometries, Nusselt theory.

MCL348 Thermal Management of Electronics

3 credits (3-0-0)

Prerequisite(s): APL106 and (MCL242 or MCL141)

Electronics packaging and cooling technologies; Heat sinks: principle, types, modelling, and design; Contact resistance; Heat pipes and two phase systems: principle, types, modelling and design; Microchannel heat exchangers: single phase and two phase; Radiative heat transfer and importance in space applications; Thermoelectric devices; Measurement and characterisation techniques; Case studies of thermal management of electronics.

MCL350 Mechanical Engineering Product Synthesis

2 credits (1-0-2)

Prerequisite(s): Product-related core courses, as specified by the instructor

Study of product specifications, GA drawings, sub-systems and component functionalities. Component-wise study of engineering design, including, material selection, stress analysis, fluid flow analysis, heat transfer analysis, etc. Implications of geometrical dimensioning and tolerancing. Materials and manufacturing processes. Assembly. Wear, performance deterioration and failure. Testing and certification. Failure modes and effects analysis. Modifications and their implications. Regulatory requirements. Standards.

MCL361 Manufacturing System Design

3 credits (3-0-0)

Prerequisite(s): MTL108, MCL261

Manufacturing strategy, Manufacturing flexibility, Manufacturing complexity, Investment decisions using life cycle costing, System reliability and maintenance models, Economic design of quality control plans, Single and mixed model assembly line balancing, Shop floor scheduling algorithms, Lot sizing and inventory control models, Performance modeling of manufacturing systems, Production control mechanisms like Kanban, CONWIP and POL2.

MCP361 Industrial Engineering Laboratory-II

1 credit (0-0-2)

Prerequisite(s): MCP261, MCL361

Design of optimal acceptance sampling plans, Design of optimal control charts, Simulation of process failures, Simulation of machine failures and Simulation of job shops and production lines with various production control mechanisms.

MCL363 Investment Planning

3 credits (3-0-0)

Prerequisite(s): MCL261 & MCL262

Introduction to investment and rate of return, Markowitz theory and its applications to optimal portfolio management, Introduction to Bonds, Introduction to Derivatives and Options, Concept of Risk Neutral Pricing, Single period and multiple period binomial models for option pricing, Introduction to Black Scholes model and the formula.

MCL364 Value Engineering

4 credits (3-0-2)

Overlaps with: MEL671

Introduction to Value Engineering and Value Analysis, Methodology of V.E., Quantitative definition of value, Use value and prestige value, Estimation of product quality/performance, Classification of functions, functional cost and functional worth, Effect of value improvement on profitability. Introduction to V.E. job plan / Functional approach to value improvement, Various phases and techniques of the job plan, Life Cycle Costing for managing the total value of a product, Cash flow diagrams, Concepts in LCC, Present Value concept, Annuity cost concept, Net Present Value, Pay Back period, Internal rate of return on investment (IRR), Continuous discounting, Examples and illustrations.

Creative thinking and creative judgment, False material, labor and overhead saving, System reliability, Reliability elements in series and in parallel, Decision Matrix, Evaluation of value alternatives, Estimation

of weights and efficiencies, Sensitivity analysis, Utility transformation functions, Fast diagramming, Critical path of functions, DARSIRI method of value analysis.

MCL366 OR Methods in Policy Governance

3 credits (3-0-0)

Prerequisite(s): MCL261

Mixed Integer Linear Programming, Markov Decision Processes, Applications of OR techniques to aviation security, resource allocation, energy policy, railways systems, management of natural resources, Public Service Delivery.

MCL368 Quality and Reliability Engineering

3 credits (3-0-0)

Prerequisite(s): MTL108

Process capability analysis, Process quality improvement approaches, Economics of quality control, Reliability data analysis, Component and system reliability models, Reliability test plans, Warranty analysis, Maintenance models.

MCL370 Special Topics in Industrial Engg

3 credits (3-0-0)

Prerequisite(s): To be defined by the course coordinator at the time of offering the course if required

Specialized topics in Industrial Engineering. The detailed contents will be decided by the faculty who will teach the course.

MCL380 Special Topics in Mechanical Engineering

3 credits (3-0-0)

Prerequisite(s): courses as specified by the instructor and EC 50

Course details shall be announced at the time of offering of the course. The assessment will be based on a combination of assignments, quizzes, and term paper and tests.

MVC390 Special module in Mechanical Engineering

1 credit (1-0-0)

Prerequisite(s): courses as specified by the instructor and EC 50

Course details shall be announced at the time of offering of the course. The lectures will be supplemented by reading materials. The assessment will be based on a combination of assignments, quizzes, and term papers (to be announced by the instructor) and tests.

MCP401 Mechanical Engineering Laboratory-II

2 credits (0-0-4)

Prerequisite(s): MCL211, MCL212, MCL242, MCP301

The experiments would involve full or partial fabrication of setups and then taking readings and analysis of its behavior, instead of using ready made setups. The knowledge gained in control engineering course would also be used for setting up computerised measurements using Data acquisition cards.

MCD411 B.Tech.Project-I

4 credits (0-0-8)

Prerequisite(s): EC 100

A broad outline of the contents is as follows and a project may include some or all of these activities:

Team formation for designing, manufacturing and operating a selected product, formulating project management procedures. Need identification, assessment of alternative designs, selection of design for development, defining design and performance specifications, and testing procedure. Detailed mechanical, thermal and manufacturing-related design of systems, assemblies, sub-assemblies and components culminating in engineering drawings and material specifications; preparing bill of materials and identification of standard components and bought-out parts.

Using engineering drawings, the process sheets are developed based

on available materials, machine tools and other fabrication facilities. Materials and standard components are procured and manufacturing is carried out. After inspection, parts are accepted. Assembly procedure is finalized and the machine

is assembled. Acceptance tests are carried out vis-à-vis specifications. Professional quality documentation of all designs, data, drawings, and results, change history, overall assessment, etc. is mandatory, along with a final presentation.

MCD412 B.Tech.Project II

7 credits (0-0-14)

Pre-requisites: EC 100

MCL421 Automotive Structural Design

3 credits (2-0-2)

Prerequisite(s): MCL211, MCL321

Overlaps with: MEL736 (40% - Students should be allowed to do only one of the two courses)

History of automotive design, Design cycle for an Automobile, Styling, Loads on the chassis, Chassis and structural Design for static loads, Dynamic and impact loads, Energy absorption in the vehicle, Designing for NVH, Designing the suspension system, Designing the brake system.

MCL422 Design of Brake Systems

3 credits (2-0-2)

Prerequisite(s): APL104, MCL111, MCL321

Types of brakes, Friction materials in brakes and their characteristics, Design of brakes in passenger cars / vans: weight transfer, effect of tyre / road adhesion, wheel lock, brake efficiency / adhesion utilization; Design of brakes in vehicle – trailer combinations: in light trailers, overrun brakes, center axle trailer, chassis trailer; Brake-design analysis: Brake and shoe factors in different types of brakes, Comparison of estimation by analytical and FE methods; Thermal effects in friction brakes (thermal analysis and heat dissipation); Issues in electronic control of brakes: features of anti-lock brake system, Traction Control System, Electronic Stability Control, Adaptive Cruise Control, trailer Sway Control; Brake Noise: Sources, its analysis (using analytical and FE based approaches) and control.

MCL431 CAM and Automation

3 credits (2-0-2)

Prerequisite(s): for ME1: MCL131, MCL231

for ME2: MCL136

Automation need and types of automation, economics of automation, FMS, CIM. Basics of electro-mechanical automation technologies, Circuit design and applications of hydraulic, pneumatic, electro-pneumatic, electro-hydraulic and programmable logic control (PLC) systems. Numerical control, NC and CNC hardware and programming, Machine controls, HMI design and implementation, DNC system, Control engineering in production systems: open loop and closed loop control systems, Automated material handling technologies, Group technology, Computer aided process planning, Inspection automation and reverse engineering, Rapid prototyping and tooling concepts and applications, virtual manufacturing.

MCL441 Modelling and Experiments in Heat Transfer

4 credits (2-0-4)

Prerequisite(s): (MCL242 or MCL141) and MCP301

Modelling heat transfer phenomena, comparison with experimental data, assumptions and their implications. Mathematical modeling: dimensional analysis, scaling, physical similarity, self-similarity, physical laws and constitutive relations. Solution methodologies: separation of variables, self-similar solutions, boundary layer analysis. Results: representation and interpretation, uncertainty and error bands. Heat transfer experiments: design, uncertainty analysis, selection of geometrical and physical parameters, instrumentation, and rig calibration. Temperature, pressure and flow rate

measurements. Systemic errors in temperature measurement: thermocouples and thermowell. Data acquisition systems: basics and applications. Data analysis and error estimation. Project-type work involving modeling, designing and performing experiments related to heat transfer applications.

MCL442 Thermofluid Analysis of Biosystems

3 credits (3-0-0)

Prerequisite(s): APL106 and [(MCL140 & MCL242) or MCL141] and EC 80

Applications of fluid mechanics, heat transfer, and thermodynamics to biological processes, including blood flow in the circulatory system, heart function, effects of heating and cooling on cells, tissues, and proteins.

MCL443 Electrochemical Energy Systems

3 credits (3-0-0)

Prerequisite(s): MCL140 & MCL242 or MCL141 and EC 80

Overlaps with: CLL722 (30%), CLL720 (10%), CLL721 (15%)
Introduction to electrochemical systems – electrochemical power sources, nomenclature, survey of common types. Thermodynamics – thermodynamic functions, chemical and electrochemical potentials, temperature dependence, activity dependence. Reaction kinetics – electrical double layer, kinetics, activation energy of reactions, current-voltage relationship, polarization and losses, charge transfer kinetics, performance criteria. Transport processes – infinitely dilute solutions, concentrated solutions, thermal effects, fluid mechanics. Modeling of electrochemical systems – governing equations, assumptions, boundary conditions of species and charge. Thermal management. Environmental impact.

MCL701 Advanced Thermodynamics

3 credits (3-0-0)

Review of basic fundamentals, closed system and open system formulations, laws of thermodynamics, the maximum entropy principle, concept of equations of state, ideal gas, van der Waals equations and other variants, compressibility, maximum work theorem, exergy, energy minimum principle, thermodynamic potentials and relationships for compressible, elastic, electric and magnetic systems, stability conditions of potentials, multicomponent systems, entropy of mixing, chemical potential, mixtures, conditions of equilibrium and stability of multicomponent systems, thermodynamics of reactive mixtures.

MCL702 Advanced Fluid Mechanics

3 credits (3-0-0)

Formulation of Navier-Stokes equations. Exact solutions of the Navier-Stokes equations for select unsteady/steady flows, potential flows, boundary layer theory and its applications, turbulent flows; special topics in fluid mechanics such as capillary and electrokinetic flows.

MCL703 Advanced Heat and Mass Transfer

3 credits (3-0-0)

Derivation of governing equation for three dimensional transient heat conduction problems. Two-dimensional steady state heat conduction. Transient one-dimensional heat conduction in finite length bodies. Diffusive Mass Transfer – Fick's law and governing equation. Melting and solidification.

Newton's law of cooling-Derivation of energy equation- Self-similar solution for laminar boundary flow over a flat plate – energy integral method for laminar boundary layer flow over a flat surface-Laminar internal flows-thermally fully developed flows-Graetz problem - Natural convection over a vertical flat plate: similarity solutions and energy integral method- natural convection in enclosures-mixed convection-Turbulent flow and heat transfer: Reynolds averaged equations-Turbulent boundary layer flows – The law of wall-integral solutions. Convective mass transfer.

Convection with phase change: Pool boiling regimes- Condensation: drop-wise condensation-Laminar film condensation over a vertical surface.

Radiative heat transfer: Black body radiation-radiative properties of non-black bodies-surface radiation heat transfer in enclosures with gray diffused walls and non-gray surfaces.

MCL704 Applied Mathematics for Thermofluids

3 credits (3-0-0)

Initial-boundary value problems, Linear and Non-linear systems; Theory of linear homogeneous and nonhomogeneous equations; Non-linear systems; Series solutions of linear ordinary differential equations; special functions; 1st order PDEs, classification of PDEs: 2nd order PDE - Planar, cylindrical and spherical geometries, Homogeneous and nonhomogeneous PDEs, Strum-Liouville theory; Stability and instability of regular system.

MCL705 Experimental Methods

4 credits (3-0-2)

Methodology and planning of experimental work and reporting results. Types of errors, uncertainty propagation and statistical basis of uncertainty. Statics and data interpretation: population and sample, mean and standard deviation, standard deviation of mean, probability distributions and sample size selection. Design of experiments. Instruments: specifications, characteristics, and sources of error. Data acquisition and signal processing: analog to digital conversion, Fourier series and transform, sampling, aliasing, and filtering. Cross-correlation and autocorrelation. Digital image analysis.

MCL721 Automotive Prime Movers

3 credits (3-0-0)

MCL722 Mechanical Design of Prime Mover Elements

3 credits (3-0-0)

MCL723 Vehicle Dynamics

3 credits (3-0-0)

MCL724 Biomechanics of Trauma in Automotive Design

3 credits (3-0-0)

MCL725 Design Electronic Assist Systems in Automobiles

3 credits (3-0-0)

MCL726 Design of Steering Systems

3 credits (3-0-0)

MCL728 Nanotribology

3 credits (3-0-0)

MCL729 Nanomechanics

3 credits (2-0-2)

Introduction to nanomechanics, need for studying nanomechanics, its scope and limitations; Dynamics of 2-atom, 3-atom molecules, and an N-atom chain; Crystal Lattice and Reciprocal Lattice; Dynamic Interaction Potentials and Periodic Boundary Conditions in molecular dynamics simulations; Role of different ensembles; Evaluation of atomic stresses and strains, Evaluation of Specific Heat, Dissipation of Energy in nano-mechanical Systems; Solutions for classical Nano scale structural components such as Carbon Nanotubes, Nano rods, Nanowires and Polymers; Correlations between Nano-mechanics and classical continuum theory of solids; Size effect; Introduction to multiscale modeling.

MCL730 Designing with advanced materials

4 credits (3-0-2)

Introduction to polymers, composites and smart materials. Polymer microstructure and mechanical properties. Thermosets and thermoplastics. Viscoelastic creep and relaxation behavior, mechanical models, and polymer failure. Design considerations and practices for polymeric components with case studies. Composite materials and their applications. Micro and macro mechanics of lamina, failure

criteria of lamina, classical laminate theory, strength of laminates. Design considerations and practices for composite structures with case studies. Structure, applications and design considerations of smart materials such as shape memory alloys and piezoelectric materials.

MCL731 Analytical Dynamics

3 credits (3-0-0)

Review of Newtonian dynamics; Degrees of freedom; Generalized coordinates and constraints; Holonomic and nonholonomic systems; Principle of Virtual work; D'Alembert's principle; Euler-Lagrange equations of motion; Hamilton's principle; Rotating coordinate systems; Euler angles; Coordinate transformation; Kinematics of a rigid body; Euler's equations of rotation; Computer-oriented dynamic modeling; Orthogonal-complement based formulation of dynamic equations; Geometric theory; Stability; Lyapunov's direct method; Introduction to flexible-body dynamics.

MCL732 Machine Tool Design

3 credits (3-0-0)

Prerequisite(s): MCL231 or MCL136

Course will cover machine tool design process which will include machine tool specifications, conceptual design, configuration design, mechanical structure design, design of drives & controls. Methods of achieving required mechanical accuracies considering static, dynamic and thermal loads, geometric, kinematic and thermal error compensation. Machine tool acceptance tests and characterization of machine tools for no-load and load conditions.

MCL733 Vibration and Noise Engineering

4 credits (3-0-2)

Elements of vibration analysis: modeling practical systems through discrete system/lumped parameters approach and its subsequent analysis for different types of excitations encountered in practice. Alternate mathematical models of damping, two and multi-DOF systems, tuned mass dampers. Introduction to vibration isolation: displacement/force isolation, approaches for MDOF system analysis with emphasis on modal approach. Numerical and Continuum Analysis: Finite Element Method for dynamic analysis. Distributed parameter models of rods, bars, beams, membranes and plates. Introduction to Modal testing, Vibration Testing. Spatial, Modal and Response models of vibrating systems. Non-linear and Random vibrations: Introduction to non-linear vibrations, response to random excitation. Engineering acoustics: Wave approach to sound, wave equation, Noise measurement and instrumentation standards. Sound pressure, power and intensity and its measurement, Sound Intensity, Various Sound Fields, Concept of Monopoles, Dipoles and Quadrupoles, Sound Power measurement, Transmission loss, Design of partitions, barriers, acoustic enclosures, Design of Mufflers; Sound Absorbing Materials, Noise Control approaches, case studies.

MCL735 CAD and Finite Element Analysis

4 credits (3-0-2)

Introduction and overview. Need and Scope of Computer Aided Machine Design. Role of Geometric Modelling, FE and Optimization; Introduction to the Finite Element Method, principles of minimization of potential energy: Rayleigh Ritz and Galerkin Methods, 1D elements and their analysis, analysis of bars, beams and trusses, axis-symmetric solids, 2D/3D solids, solution methods in FE, error analysis, Introduction to Dynamic and Non linear analysis; Limitations of FEM; 2D and 3D Geometric transformations, Orthographic and Perspective Projections. Euler angles, Windowing, view-porting and viewing transformations, Modeling of cubics, beziers, b-splines, NURBS and advanced curves; Modeling of surfaces: ruled surfaces, surfaces of revolution, Bicubic, Bezier, B-splines; Feature Based Modeling and Feature Recognition.

MCL736 Automotive Design

4 credits (3-0-2)

History of automotive design, Design cycle for an Automobile, Styling, Loads on the chassis, Chassis and structural Design for static loads, Dynamic and impact loads, Energy absorption in the vehicle, Computational tools for structural design, vehicle occupant system analysis, biomechanics of the human body and its implications for

structural design, Designing for NVH, Designing the suspension system, Designing the brake system, Design of engine characteristics, Design requirements of the transmission and the driveline.

MCL738 Dynamics of Multibody Systems

3 credits (2-0-2)

MCL740 Lubrication

3 credits (3-0-0)

MCL741 Control

4 credits (3-0-2)

An introduction to control systems; transfer function representation of mechanical and mechatronic systems; stability analysis, gain setting for stability; transient and steady-state response analyses; control system analysis and design by the Root-Locus method and the Frequency-Response method; PID controllers design and realization; State-Space representation, controllability and observability; control system design in State Space; digital implementation of classical controllers.

MCL742 Design & Optimization

4 credits (3-0-2)

Review of machine element design based on strength and distortion criterion; review of choice of materials and their treatment: Designing for fatigue, creep; Design criterion for fracture; Application of advanced design criterion to machine elements (like shafts, spur / bevel / worm gears); Design of structures, machines and equipment; Classical methods of unconstrained optimization (single variable and multi variable), classical methods of constrained optimization, Numerical optimisation techniques including i. genetic algorithms, (binary and real coded) ii. simulated annealing. Case studies of Optimum Design (Gear Box, Power Transmission, shape and topology using FE).

MCL743 Plant Equipment Design

3 credits (3-0-0)

MCL744 Design for Manufacture and Assembly

4 credits (3-0-2)

MCL745 Design of Precision Machines

3 credits (2-0-2)

Prerequisite(s): AML140, MCL111, MCL211

Fundamental concepts in precision design; controlling Degrees-of-Freedom, exact-constrained design; design of elastic mechanisms/ flexures/ compliant mechanisms; friction, hysteresis and micro-slip; actuators and sensors for precision motion; materials selection in precision machine design; slideways for long range precision motion; and dynamics of precision mechanisms.

MCL745 Robotics

4 credits (3-0-2)

Type and components of robots; Classification of closed- and open-loop kinematic systems; Definition of mechanisms and manipulators; Kinematic constraints; Degrees of freedom and mobility; Rotation representation; Coordinate transformation; DH parameters; Matrix methods for forward and inverse kinematics analyses; Jacobian and singularity; Dynamic modeling; Euler-Lagrange and Newton-Euler equations of motion for serial type manipulators; DeNOC-based dynamic formulation; Inverse and forward dynamics algorithms; Parallel robots; Inverse and forward kinematics of parallel robots; Gain singularity of parallel robots; Introduction to control of robotic systems.

MCL746 Design for Noise Vibration and Harshness

4 credits (3-0-2)

MCL747 Design of Precision Machines

3 credits (2-0-2)

Pre-requisites: For UG: AML140, MCL111, MCL211

Fundamental concepts in precision design; design for stiffness; controlling Degrees-of-Freedom, exact-constrained design; design

of elastic mechanisms/ flexures/ compliant mechanisms; friction, hysteresis and micro-slip; actuators and sensors for precision motion; materials selection in precision machine design; slideways for long range precision motion; and dynamics of precision mechanisms.

MCL748 Tribological Systems Design

4 credits (3-0-2)

Lubrication, Friction and Wear aspects in Design; Tribological Surfaces – Measures of Roughness and associated mechanisms of Lubrication, Regimes of Lubrication; Boundary lubrication and lubricants. Friction and wear at different length scales. Viscosity - its representation and measurement, apparent viscosity. Selection of Bearings - Rubbing, Fluid Film, Rolling Element. Lubricants - Types and Selection, Bearing Design - Rubbing, Fluid Film Journal and Thrust, Dynamically Loaded, Rolling Element, Design of lubrication Systems. Introduction to maintenance of Bearings, Seals, Linear Bearing Design, Slideways. Material considerations for selected tribological applications.

MCL749 Mechatronic Product Design

4 credits (3-0-2)

Pre-requisites: For UG : ELL100, MCL338

Overlaps with: EEL482

Introduction to key elements of Mechatronic products - Physical Systems Modeling, Sensors and Actuators, Signals and Systems, Computers and Logic Systems, Software and Data Acquisition; Mechatronic Design Approach, System Interfacing, Instrumentation and Control Systems; Microprocessor-Based Controllers and Microelectronics; Product functional block diagram, schematic and PCB Design, Product enclosure design, Microcontroller interfacing and programming, Interfacing with sensors and actuators, driver circuits, motion control, Stepper and servo motion control. Software and hardware tools to build mechatronic systems. Design and selection of mechatronic elements namely sensor-like encoders and resolvers; stepper and servomotors, ballscrews, solenoid like actuators, and controllers with applications to CNC systems, robotics, consumer electronic products etc. Design of a mechatronic product using available software CAD packages.

Laboratory work will be hands-on Microcontroller & Microprocessor interfacing and programming, Motion controller, motors, sensors, and actuators.

MCL750 Product design and Manufacturing

3 credits (1-0-4)

Prerequisite(s):

Product design for a given need or identified need, Development and evaluation of multiple solutions and concepts, Manufacturability assessments of given design, Product Costing and Bill of Materials, Process planning for components and assembly, Product manufacturing and Testing.

MCL751 Industrial Engineering Systems

3 credits (1-0-4)

Decision making under uncertainty (Pay-off tables, decision trees, utility theory etc.), Probability based methods for outcome prediction (Logistic regression, Bayesian belief networks, Monte Carlo simulation etc.), Multicriteria decision making (AHP, ANP, Graph theory etc.), System Simulation (through games like the Beer game for supply chain), Queuing theory games, Economic analysis (NPV, IRR etc. for deterministic and stochastic scenarios), Algorithms (branch and bound, Metaheuristics etc.), Formulation of bigger optimization problems and solving using available solvers (eg. CPLEX). Shop-floor scheduling.

MCL753 Manufacturing Informatics

4 credits (3-1-0)

Prerequisite(s): MCL361

Introduction to manufacturing analytics (manufacturing analytics concepts, contemporary issues in high-value manufacturing, and opportunities provided by analytics and big data technologies), data types and applications (point of sale data, service touch point data, service centre data, warranty data, machine condition data, machine

failure history, machine utilisation data, work in process data and online quality control data), optimisation of manufacturing processes (optimisation concepts, evolutionary computing, multi-objective optimisation, and applications of optimisation for sequential and assembly processes), and latest advancements in manufacturing analytics (virtual reality, augmented reality, and motion capture gaming technologies for manufacturing).

MCL754 Operations Planning and Control

3 credits (3-0-0)

Evolution of Scientific Management and Buzzwords, Inventory Management and Control, MRP and ERP, JIT, Modeling of Processes and Systems, Measuring and Improving Performance, Scheduling, Aggregate Production Planning, Facility Location.

MCL755 Service System Design

3 credits (2-0-2)

Prerequisite(s): MTL108

Need for servitization, Service system types, Key dimensions of service systems, Frameworks for service system design, tools for service system design, Value co-creation, Service quality models, Economics of service systems, Service contract design, CMMI-SVC model for service systems, Case studies on service system design.

MCL756 Supply Chain Management

3 credits (3-0-0)

Prerequisite(s): MCL361

Supply Chain Orientation and Management, Various flows in a typical supply chain, Supply chain strategy – its context, components and structure, Location Decisions, Inventory Decisions, Information Decisions – Bull whip effect and its ramifications, remedies, Transportation Decisions - including planning techniques, Supply chain modeling and analysis, Performance measurement; Various frameworks including Balanced Score Card, SCOR etc., Customer Service level selection and supply chain vulnerabilities, Reverse Logistics and decision making involved, Supply chain integration and web enabled supply management.

MCL757 Logistics

3 credits (3-0-0)

Logistics Management is the part of supply chain management that plans, implements, and controls the efficient, effective forward and reverse flow and storage of goods, services, and related information between the point of origin and the point of consumption in order to meet customers' requirements.

This course provides a practical, management perspective of the following areas of logistics: distribution, transportation, international logistics, inventory control, sustainable logistics practices, key performance indicators, supply chain finance, leadership in a supply chain role, and an introduction to logistics technology including RFID and ERP systems.

MCL758 Optimization

3 credits (3-0-0)

MCL759 Entrepreneurship

3 credits (2-0-2)

Ideation, Team Building, Making of a Business Plan, Securing Funding, Legal Procedures, Case studies of successful and failed attempts.

MCL760 Project Management

3 credits (3-0-0)

Prerequisite(s): MTL108

The nature of projects, the project as a non-repetitive unit production system, the project as an agent of change. Project Identification considering objectives and SWOT analysis, Screening of project ideas, Technical, Market, Financial, Socio-economic and Ecological Appraisal of a project. Work break down structure and network development. Basic Scheduling, Critical Path and four kinds of floats, Scheduling

under probabilistic durations, Time Cost tradeoffs, Project Monitoring with PERT/Cost, Organizational aspects, Computer packages and project completion.

MCL761 Probability and Statistics

3 credits (3-0-0)

Probability Laws, Random Variables, Conditional Probability and Bayes Theorem, Important Random Variables and their properties, Joint Probability Distributions, Law of Total Probability, Law of Large Numbers, Central Limit Theorem, Estimation Theory, Parameter Estimation, Hypothesis Testing using Parametric and Non-Parametric Methods, Goodness of fit tests, ANOVA, Linear Regression (Simple, Generalized) and Logistics Regression.

MCL765 Operations Research

3 credits (3-0-0)

The art and science of modeling, Linear Programming, Solution methods including Simplex, Sensitivity Analysis, Shadow Pricing and Duality Theory, Integer Programming and Solution methods, Dynamic Programming with applications, Large Canonical problems such as Transportation Problem, Traveling Salesman Problem, Network Flow Problem, Case Studies.

MCL769 Metal Forming Analysis

4 credits (3-0-2)

MCL770 Stochastic Modeling and Simulation

3 credits (3-0-0)

Overview of Probability Basics, Introduction to Discrete Time Markov Chains (DTMC), Transient and Limiting analysis of DTMC, Introduction to Continuous Time Markov Chains (CTMC), Transient and Limiting analysis of DTMC, Applications, Discrete Event Simulation - Introduction, Generation of Random Variables, Simulation modeling through case studies.

MCL771 Value Engineering and Life Cycle Costing

3 credits (3-0-0)

Introduction to Value Engineering and Value Analysis, Methodology of V.E., Quantitative definition of use value and prestige value, Estimation of product quality/performance, Classification of Functions, Functional Cost and Functional Worth, Effect of value improvement on profitability. Introduction to V.E. Job plan / Functional Approach to Value Improvement, Various phases and techniques of the job plan.

Life Cycle Costing for managing the Total Value of a Product, Cash flow diagrams, Concepts in LCC, Present Value concept, Annuity cost concept, Net Present Value, Pay Back period, Internal rate of return on investment (IRR), Continuous discounting, Examples and illustrations.

Creative thinking and creative judgment, False savings, System Reliability, Evaluation Matrix, Assessment of value alternatives, Estimation of weights and efficiencies, Sensitivity analysis, Utility transformation functions, Fast diagramming, Critical path of functions, DARSIRI method of value analysis. Critical review of some industry oriented projects and case studies.

MCL772 Reliability Engineering

3 credits (3-0-0)

Time to failure distributions; Parameter estimation for non-repairable systems; Reliability models for series, parallel and mixed configurations; Reliability models for active/passive redundancy, load sharing systems, mixed population, competing failure modes; Stress-Strength models; Conditional reliability models and residual life calculation; Reliability models for multiple operational phases; Shock based reliability models; Reliability models for non-repairable systems; Parameter estimation for repairable systems, Failure Mode and Effects Analysis, Fault Tree Analysis; Failure simulation; Warranty cost analysis; Reliability allocation; Reliability of production systems; Test plan design for non-accelerated life tests; Accelerated life testing models; Burn-in test plans.

MCL773 Quality Systems

3 credits (3-0-0)

Introduction to quality systems through approaches proposed by Juran, Deming, Baldrige, Taguchi, Crosby etc., Quality costs, Requirements analysis using methods like Kano's analysis, Requirement mapping using QFD, Product and process analysis using Design and Process FMEA, Robust design and process improvement using online and offline methods for design and analysis of experiments, Shainin's tools for variability reduction, Process capability analysis and loss functions, Statistical tolerancing, Design of control charts and acceptance sampling plans, Quality standards like ISO 9000, ISO 14000, CMMI etc.; Service quality models and Service blueprints and Service FMEA, Case studies.

MCL775 Special Topics in IE

3 credits (3-0-0)

MCL776 Advances in Metal Forming

3 credits (3-0-0)

Pre-requisites: For UG: MCL131 or MCL132; for PG MCL769

Advanced metal forming processes such as tube and sheet hydroforming, High energy rate forming processes such as EMF, EHF and explosive forming. Design of dies for forging, extrusion and wire drawing, Die design for sheet metal forming processes such as single and multi-stage deep drawing, bending and stretch forming. Materials used for making forming tools, Lubrication mechanisms, Metal forming equipment, Formability testing of sheet metals, Determination of Forming Limit Diagrams and their applications, Warm forming, Micro forming.

MCL778 Design and Metallurgy of Welded Joints

4 credits (3-0-2)

Importance of welding in fabrication, Problems and difficulties in welded structures, service and fabrication tests and their importance, weld testing and qualification, causes and remedies for weld defects, weld symbols, weld joint design for strength and quality and automation in welding.

MCL780 Casting Technology

4 credits (3-0-2)

Sand casting: sand molding techniques, Core sand and core fabrication

Other casting: Permanent mold, pressure die casting, squeeze casting, centrifugal casting, continuous casting, stir casting, defects and inspection.

Gating system, risering system, casting design: Metallurgical consideration, design consideration, economical consideration. Fluidity testing, Application of CAD\CAM in foundry.

Casting of complicated shapes: automotive components, casting of light alloys – Aluminum, magnesium and Titanium alloys

Advances in near net shape manufacturing: Metal Injection moulding, Laser engineered net shaping.

MCL781 Machining Processes and Analysis

4 credits (3-0-2)

MCL782 Computational Methods

2 credits (2-0-0)

MCL783 Automation in Manufacturing

4 credits (3-0-2)

Introduction to Automation of different manufacturing processes. Types of systems - mechanical, electrical, electronics; Data conversion devices, transducers, signal processing devices, relays, contactors and timers. Sensors and their interfaces;

Hydraulics & Pneumatic Systems design and their application to manufacturing equipment; Sequence operation of hydraulic and pneumatic cylinders and motors; Electro Pneumatic & Electro Hydraulic

Systems design, Relay Logic circuits, Feedback control systems, PID Controller; Drives and mechanisms of an automated system: stepper motors, servo drives. Ball screws, linear motion bearings, electronic camming and gearing, indexing mechanisms, tool magazines, and transfer systems. Programmable Logic Controllers, I/Os, system interfacing, ladder logic, functional blocks, structured text, and applications. Human Machine Interface & SCADA; Motion controller and their programming, PLCOpen Motion Control blocks, multi axes coordinated motion, CNC control; RFID technology and its application; Machine vision and control applications. Modular Production Systems – Distribution, Conveying, Pick & Place etc.

Laboratory work will be hands-on design and operation of automatic systems.

MCL784 Computer Aided Manufacturing

4 credits (3-0-2)

MCL785 Advanced Machining Processes

3 credits (3-0-0)

Introduction to advanced machining processes – need for such processes and application areas

Mechanical Energy utilized advanced machining processes like ultrasonic machining, abrasive flow machining, magnetic abrasive finishing, magneto-rheological finishing, abrasive water jet machining – mechanics of cutting, process parametric analysis, process capabilities, applications

Thermoelectric based advanced machining processes like electro discharge machining, wire EDM, Plasma Arc Machining, Laser Beam Machining, Focussed Ion Beam Machining – working principles, material removal mechanisms, process capabilities and applications

Electrochemical and Chemical Advanced Machining – ECG, Electrostream Drilling, Chemical Machining – process characteristics, numerical modelling of the processes, applications and limitations.

MCL786 Metrology

3 credits (2-0-2)

MCL787 Welding Science and Technology

4 credits (3-0-2)

MCL788 Surface Engineering

4 credits (3-0-2)

Introduction to surface engineering – importance and scope of surface engineering, conventional surface engineering practices like pickling, grinding, buffing etc., surface engineering by material addition like electroplating, surface modification of ferrous and non-ferrous materials like nitriding, cyaniding, aluminizing etc.

Advanced surface engineering practices like laser assisted surface modification, electron beam assisted modification, spraying techniques like flame and plasma spraying, high velocity oxyfuel, cold spray techniques.

Sputter deposition processes, PVD and CVD methods of surface coatings, surface modification by ion implantation and ion beam mixing

Characterisation of the engineered surface and coatings like thickness, porosity and adhesion of coatings, surface microscopy and spectroscopic analysis of the modified surfaces.

Functional coatings and their applications.

MCP790 Process Engineering

4 credits (2-0-4)

MCL791 Processing and Mechanics of Composite Materials

4 credits (3-0-2)

Introduction to matrix materials - polymers, metals and ceramics. Introduction to reinforcements – fibers, flakes, particulates: macro,

micro and nano. Hand layup, tape layup, autoclave moulding, vacuum bag moulding, compression moulding, resin transfer moulding, reaction injection moulding, filament winding, pultrusion, braiding, and other manufacturing variants. Macromechanics of a lamina as a building block of a composite structure, stress-strain relation, strain –stress relation for anisotropic material, orthotropic materials, material property matrix estimation, micromechanics of a lamina, effect of fiber volume fraction on properties, failure theories of a lamina. Laminate analysis, failure of a laminate, design principles of tailor made material systems.

MCL792 Injection Molding and Mold Design

3 credits (2-0-2)

Introduction to Injection molding fundamentals, flow of non-Newtonian fluids, flow of various polymer melts in a cavity, molding cycle, injection molding machine characteristics- injection unit design, clamping unit design, shrinkage, warpage, defect free product, Moldflow analysis – fundamentals of FE analysis for fill, cool, warp, stress, DOE, results interpretation. Mold design fundamentals, type of molds- two plate, three plate, feeding system – sprue, runner, gate design, ejection system - pin, sleeve, stripper plate, air ejection design. Moldings with undercuts – internal, external, threads, split cavity, split core designs. Advances in injection molding process- microcellular, gas assisted, insert, outsert, push-pull, multilive, vibration assisted, micro lamellar, lost core. Designing with plastics, applications and future research.

MCL796 Additive Manufacturing

4 credits (3-0-2)

MCD800 Professional Project Activity

3 credits (0-0-6)

MCD810 Major Project Part 1 (Thermal Engineering)

12 credits (0-0-24)

MCD811 Major Project Part 1 (Thermal Engineering)

6 credits (0-0-12)

MCL811 Advanced Power Generation Systems

3 credits (3-0-0)

General Introduction to current power generation technology and need for advances systems. Analysis of Advanced Ultra super-critical power plants, Organic Rankine Cycle based systems, Power systems using mixtures as working fluids. Sizing of compents for the selected ssytems. Design of power systems for solar, biomass and geothermal sources. Thermo-fluid analysis of solar PV systesm. Hybrid solar PV-thermal systems. Recen developments in hydro power systems.

MCD812 Major Project Part 2 (Thermal Engineering)

12 credits (0-0-24)

MCL812 Combustion

3 credits (3-0-0)

Introduction - importance of combustion. Chemical thermodynamics and chemical kinetics. Important chemical mechanisms. Coupling chemical and thermal analysis of reacting systems. Premixed systems: detonation and deflagration, laminar flames, burning velocity, flammability limits, quenching and ignition. Turbulent premixed flames. Non-premixed systems: laminar diffusion flame jet, droplet burning. Combustion of solids: drying, devolatilization and char combustion. Practical aspects of coal combustion, woodstove combustion.

MCL813 Computational Heat Transfer

4 credits (3-0-2)

Mathematical Description of the Physical Phenomena- Governing equations—mass, momentum, energy, species, General form of the scalar transport equation, Elliptic, parabolic and hyperbolic equations

Discretization Methods- Introduction to finite difference and finite volume method, Consistency, stability and convergence

Diffusion Equation- 1D-2D steady diffusion, Source terms, non-linearity, Boundary conditions, interface diffusion coefficient, Under-relaxation, Solution of linear equations (preliminary), Unsteady diffusion, Explicit, Implicit and Crank-Nicolson scheme

Convection and Diffusion- Steady one-dimensional convection and diffusion, Upwind, exponential, hybrid, power, QUICK scheme, Two-dimensional convection-diffusion

Flow Field Calculation- Incompressibility issues and pressure-velocity coupling, Primitive variable versus other methods, Vorticity-stream function formulation, Staggered grid, SIMPLE family of algorithms

Radiative heat transfer - Computation of surface radiation using zone method, Solution of radiative transfer equation using discrete transfer, discrete ordinates and finite volume methods.

MCL814 Convective Heat Transfer

3 credits (3-0-0)

Derivation of energy equation- Similarity solutions for laminar external flows - Laminar internal flows- Transition flow-Heat transfer in transition flow- Reynolds averaged equations of motion, Averaged energy equations-Turbulent flow and heat transfer over a flat plate - Turbulent flow and heat transfer in pipes and channels-Laminar and turbulent natural convection-laminar and turbulent mixed convection-Pool boiling:nucleate boiling-film boiling, flow boiling-condensation:dropwise condensation-film condensation Nusselt theory-Special topics-Convective heat transfer in rotating systems, Microscale convective heat transfer, Convective heat transfer with nano-fluids,Combined convection and radiation,Double diffusive convection.

MCL815 Fire Dynamics and Engineering

4 credits (2-0-4)

Basics of Conservation equations, Turbulence, radiation and thermochemistry. Ignition of solids- Burning and heat release rates. Properties of fire plumes- buoyant plumes and interactions with surfaces. Turbulent diffusion flames- structure, modeling, soot formation and radiation effects. Toxic products. Fire chemistry, thermal decomposition of bulk fuel, pyrolysis, nitrogen and halogen chemistry. Fire growth- ignition, initial conditions, flame and fire spread theory, feedback to fuel. Compartment zone models. Flashover, post-flashover and control. Fire detection, suppression methods, codes, standards and laws. Case studies of real fires- buildings, transport, industries, shamiana and jhuggi-jhonpdi etc.

MCL816 Gas Dynamics

4 credits (3-0-2)

Revision of fundamentals. Thermodynamics of compressible flow – wave motion in compressible medium, Mach number and cone, properties. Steady one-dimensional compressible flow through variable area ducts. Converging and converging-diverging nozzles and diffusers. Effects of heating and friction in duct flow, Rayleigh and Fanno lines. Flows with normal shocks. Oblique shocks and reflection. Expansion waves. Prandtl-Meyer flow. Flow over bodies. Measurements and applications. Jet propulsion – types of engines, propulsion fundamentals. Compressor, combustor and turbines construction and performance. Rocket propulsion – basics, solid and liquid propelled engines, parametric studies, construction features, single and multi-stage rockets. Thrust chamber and nozzle models. Studies of in-use engines. Environmental aspects.

MCL817 Heat Exchangers

3 credits (3-0-0)

Applications. Basic design methodologies – LMTD and effectiveness-NTU methods. Overall heat transfer coefficient, fouling. Correlations for heat transfer coefficient and friction factor. Classification and types of heat exchangers and construction details. Design and rating of double pipe heat exchangers, shell and tube heat exchangers, compact heat exchangers, plate and heat pipe type, condensers, cooling towers. Heat exchanger standards and testing, Heat transfer enhancement and efficient surfaces.

MCL818 Heating, Ventilating and Air-conditioning

3 credits (3-0-0)

Introduction, psychrometry of airconditioning processes. HVAC technologies. Thermal comfort - factors influencing thermal comfort. Cooling and Heating load calculations. Room air distribution principles. Design of air duct systems.

Indoor air quality.Ventilation - need, principles. Various types of air conditioning systems. Cooling, dehumidification and humidification equipment. Temperature, pressure and humidity controllers. Various types of controls and control strategies.

MCL819 Lattice Boltzmann method

3 credits (3-0-0)

Introduction, Kinetic theory and statistical mechanics, Lattice gas cellular automata, LBM, Thermal LBM, Boundary conditions, Body forces, Multiple relaxation time model,Single component multiphase models, Multicomponent models single phase models, Applications of LBM.

MCL820 Micro/nano scale heat transfer

4 credits (3-0-2)

Introduction to micro/ nano scale transport phenomena, size effect behaviour, overview of engg. applications, fundamentals of micro/ nano scale fluid mechanics and heat transfer – kinetic theory, quantum mechanics considerations, Boltzmann transport equation, molecular dynamics modelling, microfluidics, Knudsen number, slip theory, micro/ nano scale heat conduction - classical/ quantum size effects, thermal conductivity models, specific heat, thin films, convection in microtubes and channels, nanoparticles and nanofluids – preparation & transport properties, microfluidics - electrokinetic flows, microscale radiative heat transfer – modelling, properties, measurements at microscale.

MCL821 Radiative Heat Transfer

3 credits (3-0-0)

Introduction to Radiation- Recapitulation: Radiative properties of opaque surfaces, Intensity, emissive power, radiosity, Planck's law, Wien's displacement law, Black and Gray surfaces, View factors.

Enclosure with Transparent Medium- Enclosure analysis for diffuse-gray surfaces and non-diffuse, non-gray surfaces, net radiation method.

Radiative heat transfer in Participating Medium- Radiation in absorbing, emitting and scattering media. Absorption, scattering and extinction coefficients, Radiative transfer equation

Analytical solution of radiative transfer equation

Introduction to different radiation model- Discrete transfer method, discrete ordinates method

Radiation from particulate media, Dependent versus independent scattering

Non-gray radiation, Modelling of non-gray radiation

Transient radiation and its solution

Radiative transfer in porous media

Combined Heat Transfer Modes- Radiation with conduction, combined boundary layer.

MCL822 Steam and Gas Turbines

4 credits (3-0-2)

Introduction, Recapitulation of heat cycles of steam power plants and gas turbine engines, Thermodynamics and fluid dynamics of compressible flow through turbines, meanline analysis and design of axial flow turbines, Three dimensional flows in axial flow turbines, Partial admission turbines, Turbines for nuclear power plants, Steam turbines for co-generation, turbine for super critical thermal power plant, operation of turbine plants- start up and shut-down of a turbine, steady state operation.

MCL823 Thermal Design

4 credits (3-0-2)

Introduction to design, modelling and simulation, components and systems

Component design

Design of heat sink - single fin optimization, multiple fin array

Design of compact heat exchangers - Fundamentals, shell and tube heat exchangers, plate heat exchangers, finned tube heat exchangers

Design of Heat pipe - Fundamentals, design procedure

Design of thermoelectric devices - Fundamentals, thermoelectric generator, thermoelectric cooler, module design

System design:

Design of thermal systems: System identification and description with mathematical modelling: Examples with Power plant, refrigeration plant, HVAC systems, pump pipe network, electric space heaters, wind tunnel

Development of a numerical model, mathematical techniques, solution of non-linear equations, numerical model for a system, system simulation, methods of numerical simulation

Optimization -basic concepts, optimization of thermal systems, Lagrange multiplier, optimization of unconstrained problems, search based methods, Genetic algorithm, Differential Evolution method

Thermal design based on inverse methods - Definition, estimation of boundary condition, conjugate gradient method.

MCL824 Turbocompressors

3 credits (3-0-0)

Introduction, Fluid mechanics and thermodynamics of axial and radial flow compressors, operation and performance of compressors, compressor cascades, blade to blade flow for axial compressors with subsonic inlet flow, blade-to-blade flow for axial flow compressors with supersonic inlet flow, loss correlations, performance analysis of axial flow compressors, Centrifugal compressor- the centrifugal impeller, diffuser of centrifugal compressor, stall and surge, supersonic compressors, compressor instrumentation and testing.

MCL825 Design of Wind Power Farms

4 credits (3-0-2)

General Introduction to Wind Turbines, Analysis of wind source, 2-D Aerodynamics, 3-D Aerodynamics, Momentum Theory for an Ideal Wind Turbine, wind turbine performance, Design of HAWT, Design of VAWT, Component sizing, Analysis and design of wind farms, Optimal selection of layouts.

MCS830 Independent Study

3 credits (0-3-0)

MCD831 Major Project Part I

6 credits (0-0-12)

MCD832 Major Project Part II

12 credits (0-0-24)

MCL834 Vibroacoustics

3 credits (2-0-2)

MCL837 Advanced Mechanisms

3 credits (2-0-2)

MCL838 Rotor Dynamics

4 credits (3-0-2)

MCL840 Experimental Modal Analysis and Dynamic Design

3 credits (2-0-2)

MCL845 Advanced Robotics

3 credits (2-0-2)

MCL848 Special topics in Systems Design-I

2 credits (2-0-0)

MCL849 Special topics in Systems Design-II

3 credits (3-0-0)

MCV849 Special Module in Systems Design

1 credit (1-0-0)

MCD861 M.Tech. Project Part I

12 credits (0-0-24)

MCD862 M.Tech. Project Part II

12 credits (0-0-24)

MCL865 Advanced Operations Research

3 credits (3-0-0)

MCL866 Maintenance management

3 credits (3-0-0)

Introduction to maintenance management, Reliability basics, Asset criticality Analysis, Reliability centered maintenance, Basic maintenance models for age and time based replacement, block and group replacement, inspection and shock based replacement, imperfect maintenance models, Maintainability models, Availability models, Life cycle cost models, Simulation based approach for maintenance planning, Queuing models for maintenance planning, Models for condition monitoring, Models for Maintenance scheduling, Maintenance performance measurement, Asset management practices, Case studies.

MCD881 Major Project Part-1

6 credits (0-0-12)

MCD882 Major Project Part-2

12 credits (0-0-24)

Department of Physics

PYL100 Electromagnetic Waves and Quantum Mechanics

3 credits (3-0-0)

Electric and magnetic fields in a medium, Susceptibility and Conductivity, Maxwell's equations, Boundary conditions; EM wave equation, Plane wave solutions, Polarization of the EM waves, Poynting vector and intensity of the EM wave; Wave packet, Phase and Group velocities; Reflection and refraction of EM waves at a dielectric interface; Brewster angle; Total internal reflection at a dielectric interface; EM waves in a conducting medium and plasma.

Wave-particle duality, de-Broglie waves; Quantum mechanical operators; Schrodinger equation, Wave function, Statistical interpretation, Superposition Principle, Continuity equation for probability density; Stationary states, Bound states, Free-particle solution, 1-D infinite potential well, Expectation values and uncertainty relations; 1-D finite potential well, Quantum mechanical tunneling and alpha-decay, Kronig-Penny model and emergence of bands.

PYP100 Physics Laboratory

2 credits (0-0-4)

Experiments based on Design and Study of Power sources, Charging and discharging of a capacitor, Electromagnetic Induction, Phase Measurement. Experiments on geometrical and wave optics including interference, diffraction, dispersion and polarization. Experiments based on mechanics, heat, sound, fluids, resonance, like linear air track, coupled pendulum and oscillators, thermal conductivity, elasticity. Experiments in the area of modern physics, like Planck's constant, lasers, semiconductor band gap, wave motion, mechanical transmission lines.

PYL102 Principles of Electronic Materials

3 credits (3-0-0)

Pre-requisites: PYL100

(Program Linked Course: Not available to B.Tech. (Engineering Physics) students)

Energy bands in solids(KP model), Classification of electronic materials: metals, semiconductors and insulators. Free electron model, Conductivity in metals and Concepts of Fermi level, effective mass and holes, Concept of phonons, Thermoelectricity, Intrinsic, extrinsic and degenerate semiconductors, Fermi level variation by carrier concentration and temperature, Metal-semiconductor junction, p-n junction, Diffusion and drift transport, carrier life time and diffusion length; Direct and indirect band gaps, Optical transitions, photon absorption, Exciton, photovoltaic effect, Dielectrics and electrical polarization, Depolarization field, Clausius-Mossotti relation; Drude model, Electronic polarization and its mechanisms, Dielectric breakdown; Piezoelectricity, Pyroelectricity and Ferroelectricity; Magnetism in materials – types of interactions, Magnetic susceptibility, Curie and Neel temperatures; Domains, Magnetic anisotropies, Spin-orbit interaction.

PYL103 Physics of Nanomaterials

3 credits (3-0-0)

Pre-requisites: PYL100

(Program linked course: Not available to B.Tech. (Engineering Physics) students)

Basics semiconductor concepts; Quantum dot, nanoparticle and clusters; critical size for low dimensional effects and magic numbers; Size induced modifications in band gap; Tight binding and effective mass approximations; Density of states of 0-D, 1-D, 2-D, superlattice and monolayer structures; Quantum Hall effect; Thermoelectrical properties of nanostructured materials. Optical properties of bulk, metal nanoparticles, Core-shell nanoparticles; Size, shape and matrix effects; surface plasmon resonance; intrinsic and extrinsic effects; Applications of surface plasmon resonance in sensor devices; Magnetic properties of bulk and nanostructured materials; Single domain and multiple domain super paramagnetic phases; ZFC and FC measurements; Giant magnetoresistance effect. Chemical and Physical methods of synthesis of nano-particles and nano-structures, size selection methods; Measurements of size and its distribution;

Characterization by AFM, STM and STS; Applications - Single electron effect and resonant tunneling devices. QW lasers, CNT and Graphene, GMR magnetic sensor, Nanostructured solar cell, Thermoelectric devices.

PYL104 Advanced Mechanics and Thermodynamics

3 credits (3-0-0)

Pre-requisites: PYL100

(Program linked course: Not available to B.Tech. (Engineering Physics) students)

Dynamics of a single and system of particles through energy approach, Hamilton's principle, the principle of least action, Canonical transformation, implication to mechanical systems, Poisson, bracket, Concepts of phase space, Liouville's theorem, principle of stochastic cooling. Concepts of non linear dynamics, contraction of phase space volume, attractors, classical chaos, periodic motion, chaotic trajectories, bifurcations, driven damped harmonic oscillator, fractals and dimensionalities, various examples of nature, transition from discrete to continuous systems and fields. Laws of thermodynamics, Carnot's cycle, adiabatic and isothermal processes, principle of ideal engine and refrigeration, Definition of entropy, enthalpy, free energy, Maxwell's relations, Concepts of transport of heat and mass, Heat diffusion equations with and without heat source in one and three dimension based on thermal circuit concepts, Applications in nuclear reactors and Fourier transform based analysis of heat exchange process.

PYL105 Optics and Lasers

3 credits (3-0-0)

Pre-requisites: PYL100

(Program linked course: Not available to B.Tech. (Engineering Physics) students)

Basic optics: Interference and interferometers, phase change on reflection, anti-reflection film; Fresnel and Fraunhofer diffraction and examples, limit of resolution, diffraction grating, resolving power. Polarization optics, examples and applications. Lasers: Laser principles, interaction of radiation and matter, amplification and resonator conditions for laser oscillation, modes of laser, some laser systems and applications. Fiber optics: Light propagation in optical fibers, fiber communication, attenuation and dispersion, single and multi-mode fibers, fiber amplifiers and lasers, fiber optic sensors. Fourier Optics and Holography: Basics of Fourier transformation, spatial frequency, spatial filtering and some applications; Holographic principles, on-axis and off-axis holograms, types of holograms and some applications.

PYL111 Electrodynamics

4 credits (3-1-0)

Electrostatics and magnetostatics. Laplace and Poisson equations (solution), method of images. Multipole expansion. Maxwell's equations. Wave equation. Frequency dependence of permittivity. Absorption and dispersion. Kramers-Kronig relations. Conservation laws: Continuity equation, Poynting theorem, stress-energy tensor and Conservation of momentum. Solutions of Maxwell's equations in terms of potentials. Gauge transformations. Continuous distribution and retarded potentials. Lienard-Wiechert potentials. Field of moving point charge. Radiation, Electric dipole radiation, magnetic dipole radiation, Radiation from an arbitrary source. Power radiated by a point charge. Radiation reaction. Four vectors, Transformations of four vectors and tensors under Lorentz transformations. Formulation of Maxwell's equations in relativistic notations. Transformations of electric and the magnetic field vectors. Magnetism as a relativistic phenomenon. Lagrangian formulation of the electromagnetic field equations. Euler-Lagrange equations.

PYP111 Engineering Physics Laboratory-I

3 credits (0-0-6)

Experiments with various Lasers, Optical spectrometer, Microwaves, Fundamentals of Quantum Mechanics, Atomic spectroscopy and Tunneling.

PYL112 Quantum Mechanics*4 credits (3-1-0)*

Dirac's bra-ket algebra, projection operator. Matrix representation of vectors and operators. Reformulating postulates in bra-ket language, Examples. 1D harmonic oscillator, ladder operators and construction of the stationary state wave functions, number operator and its eigenstates. Quantum mechanics in 2 and 3 dimensions in Cartesian coordinates. Quantum theory of angular momentum, eigenvalues and eigenfunctions. Quantum theory of spin angular momentum, addition of angular momenta and Clebsch-Gordan coefficients. Schrodinger equation in spherical coordinates, Free particle solution and solutions for spherically symmetric potentials, Hydrogen atom. Many particle Schrodinger equation, independent particles and reduction to the system of single-particle equations. Identical particles, exchange symmetry and degeneracy, Pauli principle and its applications. EPR paradox, Entangled states, hidden variables, Bell's inequality.

PYL113 Mathematical Physics*4 credits (3-1-0)*

Linear algebra, complex variables, partial differential equations, special functions, Fourier and Laplace transforms, integral equations, vector and tensor analysis, brief introduction to group theory.

PYL114 Solid State Physics*4 credits (3-1-0)*

Crystal Structure, concepts of reciprocal lattice and Brillouin zones, Defects in Crystals, Phonons, Crystal Vibrations with monoatomic and diatomic basis, Phonon Heat Capacity: Density of states in one dimension, Debye and Einstein models, thermal expansion, Free Electron Fermi Gas, Effect of temperature on the Fermi-Dirac Distribution, E-k diagrams, Effective Mass, Nearly free electron model, Bloch function, Kronig Penny Model, Atomic origin of magnetism: Diamagnetism, Langevin theory of paramagnetism, Curie-Weiss Law, Pauli paramagnetism, Ferromagnetism, Weiss molecular theory, Ferromagnetic domains, magnetic anisotropy, Superconductivity, types of superconductors, Heat capacity, energy gap, Thermodynamics of the superconducting transition, London equation, coherence length, BCS theory of superconductivity (qualitative), Brief introduction to high temperature superconductors.

PYL115 Applied Optics*4 credits (3-1-0)*

Geometrical and Wave Optics: Fermat's Principle, Solution of ray equation, and applications. Review of Maxwell's equations and propagation of e. m. waves, reflection and refraction, total internal reflection and evanescent waves. Surface plasmons, Meta-materials. Plane waves in anisotropic media, Wave refractive index, Uniaxial crystals, some polarization devices. Interference and Diffraction: Concept of Coherence, Interference by division of wavefront and division of amplitude; Stoke's relations; Non-reflecting films; Michelson interferometer; Fabry-Perot interferometer and etalon. Fraunhofer diffraction: Single slit, circular aperture; limit of resolution. Diffraction grating, Resolving power. Fresnel diffraction: Half-period zones and the zone plate. Diffraction of a Gaussian beam. Lasers and Fiber Optics: Interaction of radiation and matter, Einstein coefficients, condition for amplification. Optical resonators, Condition for laser oscillation. Some Laser Systems. Light propagation in optical fibers, Attenuation and dispersion; Single-mode fibers, material dispersion, Fiber amplifiers and lasers. Fiber optic sensors. Introduction to Fourier Optics and Holography

PYL116 Elements of Materials Processing*4 credits (3-1-0)*

Fundamentals of thermodynamic and kinetic aspects during nucleation and growth processes, Film growth modes, 2-D growth, Epitaxy and lattice misfits, Molecular beam epitaxy, Basics of vacuum, plasma discharge and sputtering, importance for material growth, Energy enhanced processes for low temperature processing, Reactive sputtering, Ion-beam deposition, Pulsed Laser Deposition, Plasma

etching, E-beam and Ion-beam patterning, Chemical Vapor Deposition, Chemical Bath Deposition and Electrodeposition, Chemical epitaxy, Need for Epitaxy and its role in semiconductor devices, quantum wells, superlattices and hybrid structures. Mechanisms for confined materials growth for 0-D, 1-D and 2-D architecture and other complex forms, Case studies of material design by taking examples from current and emerging aspects of technologies and applications.

PYL201 Fundamentals of Dielectrics and Semiconductors*4 credits (3-1-0)*

Dielectric Properties of insulators: Depolarization Field, Local electric field at an atom, Dielectric Constant and Polarizability, Clausius Mossotti relation, Kramers-Kronig relations, dielectric strength and insulation breakdown. Structural phase transition: Landau Theory of Phase transition, Piezo- and Ferroelectricity, Energy bands in semiconductors: conduction and valence band characteristics, Equilibrium distribution of electrons and holes: Intrinsic carrier concentration. Dopants and energy levels, Statistics of donors and acceptors, variation of Fermi level with doping concentration and temperature; Defects in semiconductors, Carrier Transport Phenomena: Conductivity, Velocity saturation, Diffusion current density, Nonequilibrium Excess Carriers in Semiconductors: SRH recombination, Minority carrier lifetime, Continuity equations, Haynes-Shockley experiment, Quasi-Fermi energy levels, Surface states in semiconductors. pn Junction: Variation of electric field and electrical potential, Reverse applied bias, Junction capacitance, Charge flow in a forward-biased pn junction. Junction breakdown in reverse-biased junction, Band diagrams of heterojunctions.

PYL201 Fundamentals of Dielectrics & Semiconductors*4 credits (3-1-0)*

Dielectric Properties of insulators: Depolarization Field, Local electric field at an atom, Dielectric Constant and Polarizability, Clausius Mossotti relation, Kramers-Kronig relations, dielectric strength and insulation breakdown. Structural phase transition: Landau Theory of Phase transition, Piezo and Ferroelectricity, Energy bands in semiconductors: conduction and valence band characteristics, Equilibrium distribution of electrons and holes: Intrinsic carrier concentration. Dopants and energy levels, Statistics of donors and acceptors, variation of Fermi level with doping, concentration and temperature, defects in semiconductors, Carrier Transport Phenomena: Conductivity, Velocity saturation, Diffusion current density, Nonequilibrium Excess Carriers in Semiconductors: SRH recombination, Minority carrier lifetime, Continuity equations, Haynes-Shockley experiment, Quasi-Fermi energy levels, Surface states in semiconductors, pn Junction Variation of electric field and electrical potential, Reverse applied bias, Junction capacitance, Charge flow in a forward-biased pn junction. Junction breakdown in reverse-biased junction, Band diagrams of heterojunctions.

PYL202 Statistical Physics*4 credits (3-1-0)**Pre-requisites: PYL112*

Elementary Probability Theory: Binomial, Poisson and Gaussian Distribution, random walk problem, central limit theorem and its significance, average and distributions; diffusion and Brownian motion and their relation to random walk problem; Macrostate and microstate, Postulates of Statistical Mechanics, rules of calculations through microcanonical, canonical and grand canonical ensembles; Derivation of the thermodynamic relations from the statistical mechanics; Application to classical systems: Systems of ideal gas molecules, Maxwell Boltzmann velocity distribution, paramagnetism of non interacting spins; specific heat of solids; Concept of Thermodynamic stability and Phase Transition: Van der Waal equation of state, Ising model, critical exponents; Indistinguishability of particles and Quantum Statistical Mechanics; Bose Einstein and Fermi-Dirac distribution: Black Body radiation, Bose Einstein Condensation, Fermi level and electronic contribution to specific heat, White Dwarf stars and Chandrasekhar Limit.

PYL203 Classical Mechanics & Relativity

4 credits (3-1-0)

Pre-requisites: PYL113

Dynamics of a particle moving under Central Force, Canonical transformation and Poisson bracket formulation, Hamilton-Jacobi's theory, Non inertial (rotating) frames of references, Relativistic Mechanics.

PYL204 Computational Physics

4 credits (3-1-0)

Pre-requisites: PYL113

Introduction to the basic numerical tools, such as locating roots of equations, interpolation, numerical differentiation and integration, solutions of algebraic and differential equations, discrete Fourier transform, etc. Applications of Monte-Carlo simulations, optimization and variational methods etc. to problems of interest in multiple areas of Physics.

PYP212 Engineering Physics Laboratory-II

3 credits (0-0-6)

Pre-requisites: PYL115

Characterisation of optoelectronic/semiconductor devices, Holography, Determination of characteristic parameters of different types of optical fibers, Applications of Fiber Optics: experiments related to communication and sensors.

PYP221 Engineering Physics Laboratory-III

4 credits (0-0-8)

Pre-requisites: PYL116

Synthesis of thin films, multilayers, nanoparticles by physical and chemical vapor deposition techniques, phase diagrams, study of surface, design of thin film resistor and magnetic field sensor.

PYP222 Engineering Physics Laboratory-IV

4 credits (0-0-8)

Pre-requisites: PYL114, PYL116

Resistivity of metals and semiconductors, band gap, charge carrier density and mobilities of semiconductor, basics of junction diode and its characteristics in solar cell configuration, study of crystal structure, dielectric constant, specific heat and superconductivity.

PYS 300 Independent Study

3 credits (0-3-0)

The course details to be worked out by the faculty giving the course keeping in view the learning needs of the students.

PYL 301 Vacuum Technology and Surface Science

3 credits (3-0-0)

Need of Vacuum and basic concepts: Mean free path, Particle flux; Monolayer formation, Gas Flow regimes ; Gas release from Solids: Vaporization, Thermal Desorption, Permeation, Surface diffusion, Physisorption and Chemisorption; Measurement of Pressure: Gauges, Residual Gas Analyses; Production of Vacuum: Roughing - Rotary pumps, Oil free pumps; HV & UHV - Turbomolecular pumps, Cryopumps, Getter and Sputter Ion pumps; Materials and components in vacuum; Bulk versus surface; Electronic properties of surfaces: Contact potential and work function, Surface Plasmons; Atomic motion: Surface lattice dynamics, Surface diffusion, Surface melting and chemisorption; Adsorption of atoms and molecules; Experimental techniques for surface analysis: XPS, AES, SEXAFS, TEM, SEM, STM, AFM and RHEED.

PYL302 Nuclear Science and Engineering

3 credits (3-0-0)

Pre-requisites: PYL112

Introduction to nuclear structure, Radioactivity and applications, Nuclear detection and acceleration technology, Nuclear reactors engineering, Nuclear techniques for composition analysis, Nuclear radiation in biology.

PYL303 Materials Science and Engineering

3 credits (3-0-0)

Pre-requisites: PYL114

Elementary materials science concepts, thermally activated processes, diffusion in solids, phase diagram of pure substances, Gibbs phase rule, binary isomorphous systems, the Lever rule, zone refining, homogeneous and heterogeneous nucleation, martensitic transformation & spinodal decomposition, Temperature dependence of resistivity, Matthiessen's rule, TCR, Nordheim's rule, mixture rules and electrical switches, high frequency resistance of a conductor, thin metal films and integrated circuit inter-connections, thermoelectricity, seebeck, Thomson and Peltier effects, thermoelectric heating and refrigeration, thermoelectric generators, the figure of merit, Bonding characteristics and elastic moduli, Anelasticity, thermoelasticity, anelasticity energy losses, viscoelastic deformation, displacement models, Corrosion and Degradation of Materials: Electrochemical considerations, corrosion rates and their prediction, passivity environmental effects, forms of corrosion, corrosion environments, corrosion prevention, oxidation, protective and non-protective oxides, PB ratio, mechanisms of oxide growth, Materials Selection and Design Considerations.

PYL304 Superconductivity and Applications

3 credits (3-0-0)

Pre-requisites: PYL114

Basic properties: zero resistance, perfect diamagnetism, difference from perfect conductors; Critical temperature, Basic Introduction to High Temperature superconductors, Meissner effect, London equations, penetration depth, flux quantization, critical current and critical magnetic field, Thermodynamics of superconducting state, Type I and Type II superconductors, BCS theory, electron pairs; coherence length; energy gap; Isotope effect, Ginzburg-Landau Theory, tunneling of electron in M/I/S, tunneling of electron pairs in S/I/S: DC and AC Josephson effect, Some applications: Electromagnet, SQUID, Oscillators, basics of superconducting electronics and superconducting quantum computing.

PYL305 Engineering Applications of Plasmas

3 credits (3-0-0)

Pre-requisites: PYL111

Plasma processing of materials, surface cleaning, etching, power/fusion energy, coherent radiation generation, plasma processing of textiles, nitriding, surface modification, plasma based charged particle accelerators, Hall thrusters.

PYL306 Microelectronic Devices

3 credits (3-0-0)

Pre-requisites: PYL201

Brief overview of semiconductor fundamentals; pn junction diode - energy-band diagrams, electrostatics, current - voltage relationship, junction-breakdown mechanisms. Metal-semiconductor contacts: Schottky barrier diode, C-V and I-V characteristics of Schottky diode; ohmic contacts in semiconductors. MOS structure: Accumulation, depletion and inversion modes of operation, charge - voltage and capacitance - voltage behaviour, threshold and flatband voltages, fixed oxide and interface charge effects. MOSFET: Output and transfer characteristics, I-V relations, nonideal effects, MOSFET scaling. BJT: BJT action, current gain factors, modes of operation, I-V characteristics of a BJT, non-ideal effects, cutoff frequency of a BJT.

PYL311 Lasers

3 credits (3-0-0)

Pre-requisites: PYL115

Interaction of Radiation with Matter: Einstein coefficients; Line shape function, Line-broadening mechanisms, Condition for amplification by stimulated emission, the meta-stable state and laser action. 3-level and 4-level pumping schemes. Laser Rate Equations: Two-, three- and four-level laser systems, condition for population inversion, gain saturation; Laser amplifiers; Rare earth doped fiber amplifiers. Optical Resonators: Modes of a rectangular cavity, Plane mirror resonators, spherical

mirror resonators, ray paths in the resonator, stable and unstable resonators, resonator stability condition; ring resonators; Transverse modes of laser resonators. Gaussian beams in laser resonators. Laser Oscillation: Optical feedback, threshold condition, variation of laser power near threshold, optimum output coupling, Characteristics of the laser output, oscillation frequency, frequency pulling, hole burning and the Lamb dip; Mode selection, single-frequency lasers; Methods of pulsing lasers, Q-switching, mode-locking. Some Laser Systems: Ruby, Nd:YAG, He-Ne, CO₂ and excimer lasers, Tunable lasers: Ti Sapphire and dye lasers, Fiber lasers, Semiconductor lasers; Laser safety.

PYL312 Semiconductor Optoelectronics

3 credits (3-0-0)

Pre-requisites: PYL201

Energy bands in solids, density of states, occupation probability, Fermi level and quasi Fermi levels, p-n junctions, Semiconductor optoelectronic materials, bandgap modification, Heterostructures and Quantum Wells. Rates of emission and absorption, condition for amplification by stimulated emission, the laser amplifier. Semiconductor Photon Sources: Electroluminescence. The LED, Semiconductor Laser, Single-frequency lasers; DFB and DBR lasers, VCSEL; Quantum-well lasers and quantum cascade lasers. Laser diode arrays. Semiconductor optical amplifiers (SOA), Electro-absorption modulators based on FKE and QCSE. Semiconductor Photodetectors: Types of photodetectors, Photoconductors, Photodiodes, PIN diodes and APDs. Quantum well infrared photodetectors (QWIP); Noise in photodetection; Photonic integrated circuits (PICs).

PYL313 Fourier Optics and Holography

3 credits (3-0-0)

Pre-requisites: PYL115

Signals and systems, Fourier transform (FT), FT theorems, sampling theorem, Space-bandwidth product; Review of diffraction theory: Fresnel-Kirchhoff formulation, Fresnel and Fraunhofer Diffraction and angular spectrum method, FT properties of lenses and image formation by a lens; Frequency response of a diffraction-limited system under coherent and incoherent illumination. Basics of holography, in-line and off-axis holography, plane and volume holograms, diffraction efficiency; Recording medium for holograms; Applications of holography: display, microscopy; memories, interferometry, NDT of engineering objects, Digital Holography etc.; Holographic optical elements. Analog optical information processing: Abbe-Porter experiment, phase contrast microscopy and other simple applications; Coherent image processing: vander Lugt filter; joint-transform correlator; pattern recognition, image restoration.

PYL 321 Low Dimensional Physics

3 credits (3-0-0)

Pre-requisites: PYL201 (Only for students opting for Minor Area)

Brief overview of band structure and density of states function for 0D, 1D and 2D systems, band gap engineering and semiconductor heterostructures. Quantum wells and their optical properties, multiple quantum wells and superlattices, Bloch oscillations. Two dimensional electron gas, modulation doped heterostructures, Quantum Hall effect. Quantum wires and nanowires, electronic transport, properties and applications. Quantum dots and their optical properties, Coulomb blockade. Device applications of low dimensional systems: Double heterostructure laser, quantum cascade laser, high electron mobility transistors. 2D materials: Graphene, topological insulators, WS₂ / MoS₂ and their properties.

PYL322 Nanoscale Fabrication

3 credits (3-0-0)

Pre-requisites: PYL201

Nucleation and growth, Basic principles involved in growth with controllable dimensions, Chemical and physical techniques for growth of nanoparticle, nanorod, ultrathin films, monolayer materials, multilayer structures, nanocomposite materials. Self organized growth on substrates and templates. Micro and nanoscale patterning techniques.

PYL323 Nanoscale Microscopy

2 credits (2-0-0)

Pre-requisites: PYL201

Scanning probe microscopy such as scanning electron microscope, atomic force microscope, scanning electron microscope. Transmission electron microscope with high resolution and near field optical microscopy.

PYL324 Spectroscopy of Nanomaterials

2 credits (2-0-0)

Pre-requisites: PYL201

Absorption and Reflection spectroscopy, molecular spectroscopy fundamentals, band-gaps and quantum confinement effects, Photoluminescence and Electroluminescence spectroscopy: Origin of emissions, Infrared and Raman Spectroscopy: Vibration spectroscopy principles, Time-domain spectroscopy, Nonlinear optical spectroscopy, Single molecule single nanoparticle detection. X-Ray Diffraction: Overview of basics, Intensities of diffracted beams, structure of polycrystalline aggregates, determination of crystallite size. X-Ray Absorption Spectroscopy: Fundamentals, Qualitative analysis of XANES and EXAFS data. X-Ray Photoelectron Spectroscopy and Auger Electron Spectroscopy: Principles of the method, initial- and final-state effects, Applications and case studies using all techniques specific to nanomaterials, Introduction to synchrotron radiation and its application to study nanomaterials.

PYL331 Applied Quantum Mechanics

3 credits (3-0-0)

Pre-requisites: PYL112

Electron in a magnetic field, Landau levels, Quantum Hall effect, Aharonov-Bohm effect. Non-degenerate and Degenerate Time-independent perturbation theory, Examples: Stark effect, Atomic fine-structure, Atomic Hyperfine-structure, Zeeman Effect. Variational method, Examples, WKB Approximation, Examples and comparison. Time-dependent Perturbation theory, Examples, Fermi Golden Rule. Interaction of radiation with matter: Absorption and emission of radiation, Selection rules. Scattering theory: Scattering amplitude, Differential and total cross-sections, Born's Approximation, Scattering by spherically symmetric potentials, Examples, Rutherford's formula for Coulomb scattering, Partial wave analysis and Optical theorem, Examples. Relativistic Quantum Mechanics: Klein-Gordon equation, Properties of the free-particle KG equation including negative energy solutions. Dirac equation: The Dirac matrices and Dirac algebra. Spin of the Dirac particle. Dirac particle in an electromagnetic field, including the Pauli equation, magnetic moment and the g-factor, Free particle plane wave solutions, including negative and positive energy solutions.

PYL332 General Theory of Relativity & Cosmology

3 credits (3-0-0)

Pre-requisites: PYL203

Revision of special relativity, Notations, Equivalence principle, Introduction to tensor calculus, Metric, Parallel transport, covariant derivative and Christoffel symbols, Geodesic, Riemann curvature tensor, Ricci tensor, Geodesic deviation equation, Stress-Energy tensor, Einstein equation, Meaning of Einstein equation, Schwarzschild solution, Trajectories in Schwarzschild space-time, Perihelion shift, Binary pulsars, Gravitational deflection of light, Gravitational lensing, Gravitational collapse, Black holes, Hawking Radiation, Gravitational waves, Cosmology: Models of the universe and the cosmological principle, Cosmological metrics, Types of universe, Robertson-Walker universes, Big Bang, Dark energy.

PYD411 Project-I

4 credits (0-0-8)

To set the objectives, deliverables, work plan, logistics planning and milestones with discernible outputs, and to demonstrate the feasibility through some specific aspects of a project.

PYL411 Quantum Electronics

3 credits (3-0-0)

Pre-requisites: PYL112

Light propagation through anisotropic media, nonlinear effects, nonlinear polarization, Second harmonic generation, sum and difference frequency generation, parametric amplification, parametric fluorescence and oscillation, concept of quasi-phase matching; periodically poled materials and their applications. Third-order effects: self-phase modulations, temporal and spatial solitons, cross-phase modulation, stimulated Raman and Brillouin scattering, four-wave mixing, phase conjugation. Quantization of the electromagnetic field; number states, coherent states and their properties: squeezed states of light and their properties, application of optical parametric processes to generate squeezed states of light, entangled states and their properties; Generation of entangled states; Quantum eraser, Ghost interference effects; Applications in quantum information science. Ultra-intense laser-matter interactions.

PYD412 Project-II

8 credits (0-0-16)

Pre-requisites: PYD 411

Open to only those students opting for Departmental Specialization. The Project can be a continuation of the project undertaken for PYD 411.

PYL412 Ultrafast Laser Systems and Applications

3 credits (3-0-0)

Pre-requisites: PYL311

Review of Laser Physics: Gain media, laser oscillation, spectral line broadening, mode selection, Q-switching and mode-locking. Generation of Ultrashort Pulses: Temporal, spectral and spatial properties of pulses, Group velocity dispersion, Self-phase modulation; Pulse chirping, broadening and compression; Optical solitons, Chirp filters; High repetition-rate, high-energy few-cycle pulses. Measurement of Ultrashort Pulses: Optical and electronic pulse profiling; Intensity autocorrelation; Spectral measurement and frequency gating, FROG; Spectral interferometry, SPIDER. Ultrafast Optical Processes: Higher harmonic generation, Supercontinuum generation, Attosecond generation, Ultra-wideband optical parametric amplification. Femtosecond Laser Systems: Solid-state laser and fiber laser based systems, next-generation mid-IR lasers. Ultrafast Laser Processing: Laser ablation and surface micro/nano-structuring, Laser inscription of photonic devices, fabrication of optical waveguides and micro-fluidic chips. Ultrafast Spectroscopy: Transient absorption and emission spectroscopy, Terahertz spectroscopy; Femtosecond optical frequency combs and their applications.

PYL413 Fiber and Integrated Optics

3 credits (3-0-0)

Pre-requisites: PYL115

Modes in planar optical waveguides: TE and TM modes, Modes in channel waveguides: Effective index and Perturbation method. Directional coupler: coupled mode theory, Integrated Optical devices: Prism Coupling, optical switching and wavelength filtering etc. Step Index and graded index fibers, Attenuation in optical fibers, LP Guided Modes of a step-index fiber, Single-mode fibers, Gaussian approximation and splice loss. Pulse dispersion, Dispersion compensation, Basics of Optical Communication Systems, and recent trends. Fiber fabrication technology and fiber characterization. Periodic interaction in waveguides: Coupled Mode Theory, Fiber Bragg Gratings, Long period Gratings and applications, Optical fiber sensors: basic principles and applications.

PYD414 Project III

4 credits (0-0-8)

Pre-requisites: PYD411

Working out the detailed work plan and implementation of the project. The Project can be a continuation of the project undertaken for PYD 411.

PYL414 Engineering Optics

3 credits (3-0-0)

Pre-requisites: PYL115

Lens systems and basic concepts in their design; Optical components: Mirrors, prisms, gratings and filters; Sources, detectors and their characteristics; Optical systems: Telescopes, microscopes, projection systems, photographic systems, interferometers and spectrometers; Concepts in design of optical systems; Applications in industry, defense, space and medicine; CCD, compact disc, scanner, laser printer, photocopy, laser shows, satellite cameras, IR imagers, LCD, Spatial Light modulators.

PYV418 Selected Topics in Photonics

2 credits (2-0-0)

Pre-requisites: PYL115

Topics from the emerging areas of Photonics will form the basics, and the faculty offering the course will provide the detailed course contents

PYV419 Special Topics in Photonics

1 credit (1-0-0)

Pre-requisites: PYL115

Topics from the emerging areas of Photonics will form the basics, and the faculty offering the course will provide the detailed course contents.

PYL421 Functional Nanostructures

3 credits (3-0-0)

Pre-requisites: PYL201

Basics of low dimensional structures, QD, QW, nanostructures for optical and electronic applications, QD lasers, detectors, SET, Carbon based nanostructures, CNT, CNT optical, electrical, mechanical, chemical properties, sensors, drug delivery, photonic crystals, GMR, nanostructured magnetism, hydrogen storage, nanoclays, colloids, nanomachines, organic and biological nanostructures.

PYL422 Spintronics

3 credits (3-0-0)

Pre-requisites: PYL112

Spintronics, its need and future vision; Basics of magnetic materials, spin orbit interaction, spin polarized current and their injection, accumulation and detection, Magnetoresistance and concepts of spin detection and magnetic memory; Spin valves & GMR, CIP and CPP transport, Semiclassical transport models; Basics of spin valve and magnetic tunnel junctions, Tunnel magneto resistance, Quantum mechanical model of coherent tunneling and Giant TMR; Magnetic anisotropies and exchange bias, Spin valves with AF and SAF layers, Magnetization switching in AF and SAF layers, Magnetic domains and domain walls, single domain nano-particles; Pure spin and charge currents, spin-Hall effect and inverse spin-Hall effect, spin Seebeck effect, magneto-caloric effect, generation of spin current by charge and thermal current; Current induced magnetization switching, Spin torque effect and spin torque oscillators of tunable GHz frequency; High density data storage: MRAM, two stable states, half-select problem, Savtchenko switching and Toggle MRAM; Ultra high density devices: Current & STT driven DW motion: Race track memory, Shift resistor; Q-bits and spin logic.

PYL423 Nanoscale Energy Materials and Devices

3 credits (3-0-0)

Pre-requisites: PYL201

Basics of photovoltaics, Quantum confinement and plasmonics in photovoltaic devices, Nanorod solar cells, Principle of operation of hybrid and dye-sensitized solar cells, Nanoscale materials for improving thermoelectric figure of merit, Photoelectrochemical cells.

PYV428 Selected Topics in Nanotechnology

2 credits (2-0-0)

Topics from the emerging areas of Nanotechnology will form the basics and the faculty offering the course will provide the detailed course contents.

PYV429 Special Topics in Nanotechnology*1 credit (1-0-0)*

Topics from the emerging areas of nanotechnology will form the basics and the faculty offering the course will provide the detailed course contents.

PYL431 Relativistic Quantum Mechanics*2 credits (2-0-0)**Pre-requisites: PYL112*

Revision of Lorentz transformations, relativistic notations, Lorentz group. The Klein-Gordon equation, negative and positive energy solutions. Charged spin-zero particle, Difficulties with K-G theory. The Dirac equation, Relativistic invariance, Relativistic invariance, spin and energy projection operators. Nonrelativistic limit, Pauli equation, Solutions and their properties. Dirac sea, Anti-particle, Klein paradox, Fodly-Wouthuysen representation. Hydrogen atom, Dirac electron in an electromagnetic field, Charge conjugation.

PYL432 Quantum Electrodynamics*3 credits (3-0-0)**Pre-requisites: PYL111 & PYL112*

Lagrangian formulation of classical field theory, Field equations, symmetries, Noether's theorem and conservation laws. Energy-momentum tensor. Classical field equations: Neutral and charged scalar fields, Electromagnetic field, Dirac field, Momentum representation, Second quantization of the free fields, Interacting fields, interaction picture, Dyson-series, Feynman diagrams and Feynman rules for quantum electrodynamics. Wick's theorem. Cross-section and S-matrix, Moeller and Bhabha scattering, Compton scattering, photoelectric effect etc. Divergence, Renormalization technique, Mass and charge renormalization.

PYL433 Introduction to Gauge Field Theories*2 credits (2-0-0)**Pre-requisites: PYL111 & PYL112*

Maxwell's equations and Gauge invariance, Quantum mechanics of a charged particle as a gauge theory, Vector potential as phase, Aharonov-Bohm Effect, Superconductivity and Magnetic flux quantization in superconductors, Introduction to continuous symmetry groups, U(1) and SU(2) symmetry groups, Classical field theories, Local gauge invariance and the gauge fields, Yang-Mills gauge theories, Spontaneous symmetry breaking, Goldstone bosons, Higgs mechanism, Weinberg-Salam Model.

PYL434 Particle Accelerators*2 credits (2-0-0)**Pre-requisites: PYL111 & PYL112*

Electrostatic and electromagnetic accelerators: Van de Graff, Tandem acceleration, Linear accelerators, Synchrocyclotron, Storage ring, Free electron laser, High energy colliders.

PYV438 Selected Topics in Theoretical Physics*2 credits (2-0-0)**Pre-requisites: PYL112*

Topics from the emerging areas of Theoretical Physics will form the basics, and the faculty offering the course will provide the detailed course contents.

PYV439 Special Topics in Theoretical Physics*1 credit (1-0-0)**Pre-requisites: PYL112*

Topics from the emerging areas of Theoretical Physics will form the basics, and the faculty offering the course will provide the detailed course contents.

PYL551 Classical Mechanics*4 credits (3-1-0)*

Constraints, generalized coordinates, action principle, symmetries and conservation laws, Hamilton's equations, Poisson brackets, canonical transformations, central potentials, small oscillations, normal modes, rigid body dynamics.

PYL552 Electrodynamics*4 credits (3-1-0)*

Electrostatics, conductors, dielectrics, magnetostatics, boundary value problems, time dependent fields, waves in a medium, relativistic formulation of Maxwell's equations, radiation from accelerating charges, scattering of electromagnetic waves.

PYL553 Mathematical Physics*4 credits (3-1-0)*

Linear Algebra, complex analysis, Fourier transform and delta function, Sturm-Liouville's theorem and orthogonal functions, ordinary differential equations, Green Functions.

PYL555 Quantum Mechanics I*4 credits (3-1-0)*

Introduction, quantum mechanical wave function, Born interpretation, basic formalism (Dirac bra-ket formalism), state vectors, operators and their representation, review of one dimensional examples, one dimensional harmonic oscillator, creation and annihilation operators, Landau problem, symmetries in quantum mechanics, hydrogen atom, entanglement.

PYL556 Quantum Mechanics II*3 credits (3-0-0)*

Time independent perturbation theory, time dependent perturbation theory, cross-section scattering theory, approximation techniques, identical particles, interaction of atoms with radiation, relativistic equations.

PYL557 Electronics*4 credits (3-1-0)*

Basics of semiconductor devices such as diode, transistor, FET and MOSFET; BJT and FET based amplifiers, oscillators, switches, circuit analysis by hybrid and r-parameters, operational amplifiers and their applications, timer circuit, dc power supplies, filters and digital circuits, counters, registers, ADC and DAC and microprocessor.

PYL558 Statistical Mechanics*4 credits (3-1-0)*

Introduction to statistical methods. Some basic notions of random walks, Poisson distribution, Gaussian distribution. statistical basis for thermodynamics: macrostates, microstates, Gibb's paradox. Gibb's ensemble theory: phase space perspective, Liouville's theorem, microcanonical, canonical and grand canonical ensembles, partition function, calculations of physical properties of classical systems using ensemble approach, thermodynamic relations. applications of ensemble theory, quantum statistical mechanics: density matrix approach, statistical mechanics of Bosons and Fermions, Bose-Einstein condensation, Pauli paramagnetism, Landau diamagnetism, quantum statistics of harmonic oscillators, non-ideal gases, virial expansion, brief introduction to phase transitions, critical phenomena, transfer matrix approach, application to 1-D Ising model.

PYL560 Applied Optics*4 credits (3-1-0)*

Electromagnetic waves in a medium: review of Maxwell's equations and propagation of electromagnetic waves, various states of polarization and their analysis. Anisotropic media, plane waves in anisotropic media, uniaxial crystals, some polarization devices. Diffraction: scalar waves, The diffraction integral, Fresnel and Fraunhofer diffraction, diffraction of a Gaussian beam, diffraction grating. Fourier optics and holography: spatial frequency and transmittance function, Fourier transform by diffraction and by lens, spatial-frequency filtering, phase-contrast microscope. Holography: on-axis and off-axis hologram recording and reconstruction, types of hologram and some applications. coherence and Interferometry: Spatial and temporal coherence, fringe visibility, Michelson stellar interferometer, optical beats, multiple beam interference, Fourier transform spectroscopy. Guided wave optics: Modes of a planar waveguide, optical fibers: step-index and graded index fibers, waveguide theory and quantum mechanics, applications of optical fibers in communication and sensing.

PYD561 Project I

3 credits (0-0-6)

PYP561 Laboratory I

4 credits (0-0-8)

PYD562 Project II

6 credits (0-0-12)

PYP562 Laboratory II

4 credits (0-0-8)

PYL563 Solid State Physics

4 credits (3-1-0)

Crystal lattices, Reciprocal lattice, equivalence of Bragg and Laue formulations, Ewald Construction, bonding & packing in crystals.

Free electron theory: Drude and Sommerfield's model of conductivity.

Electrons in a Periodic Potential, Bloch theorem in lattice and reciprocal space, origin of band gap in a weak periodic potential, Kronig-Penney model, band structures, metal, insulator, semiconductor, concepts of effective mass, light and heavy holes in a semiconductor, optical properties of semiconductors.

Wannier functions, Tight binding model and calculation of band structure, Fermi Surfaces.

Thermal Properties: classical & quantum theory of harmonic crystal in one-, two-, & three dimensions, specific heat at high and low temperatures, normal modes & phonons, Einstein & Debye models of specific heat.

Special class of dielectrics & polarizability, Ferroelectric, Piezoelectric.

Magnetism: Diamagnetism, Paramagnetism, Hund's Rule, Curie's Law, Cooling by Diamagnetism, Pauli Paramagnetism, Curie's Weiss Law Ferromagnetism and Antiferromagnetic ordering, Domains.

Superconductivity: Basic Phenomenology, Meissner effect, London penetration depth, coherence length, Flux quantization,.

PYP563 Advanced Laboratory

4 credits (0-0-8)

PYL567 Atomic and Molecular Physics

3 credits (3-0-0)

Hydrogen and alkali metals, double fine structure of atoms, two electron atom, Zeeman and Paschen-back effect, X-ray spectra, general factors influencing spectral line width (Collision, Doppler effect, Heisenberg) and line intensities (transition probability, population of states, Beer- Lambert law), Molecular symmetry, irreducible representations, Rotational and vibrational spectra of diatomic molecules, FTIR and Laser Raman spectroscopy, electronic spectra, Franck-Condon principle, bond dissociation energies, Molecular orbital and models, laser cooling of atom.

PYL569 Nuclear and Particle Physics

3 credits (3-0-0)

N-N interaction, iso-spin symmetry, nuclear models, beta decay, detectors and particle accelerators, Quark model, Deep inelastic scattering, Basis of nuclear astrophysics, Fundamental particles and their properties.

PYL650 Fiber and Integrated Optics

3 credits (3-0-0)

Modes in planar optical waveguides: TE and TM modes. Modal analysis of a parabolic index medium. Modes in channel waveguides: Effective index method, Perturbation method and Variational method. Modes in multilayered waveguides: Matrix method. Directional coupler: coupled mode theory, Integrated Optical devices: Prism Coupling, optical switching, modulators and wavelength filters, etc. Step Index and graded index fibers, Attenuation in optical fibers, LP Guided Modes of a step-index fiber, Single-mode fibers, Gaussian approximation and splice losses. Dispersion in optical fibers, Pulse dispersion, Dispersion

management. Fabrication and characterization of optical waveguides. Fiber optic components and devices. Optical fiber sensors; Basic principles and applications.

PYL651 Advanced Solid State Physics

3 credits (3-0-0)

Pre-requisites: PYL563

Semiclassical model of electron dynamics, Electrons in static electric and magnetic fields, DC and AC electrical conductivity in metals, Sources of electron scattering, Boltzmann equation, Temperature dependence of electronic conductivity, Dielectric properties of insulators, Piezoelectric, Ferroelectric, Pyroelectric, Optical properties of solids, Electrons in magnetic fields, Landau Levels, Cyclotron resonance, Density of states in magnetic field, De-Haas Van Alfen effect, Quantum Hall effect, Models for ferromagnetism, Magnetic phase transition, Properties of Superconductors, Ginzburg-Landau theory, Josephson effect, Squids Microscopic Theory of superconductivity: Cooper pairs, BCS theory.

PYL652 Magnetism and Spintronics

3 credits (3-0-0)

Pre-requisites: PYL563

Magnetism of metals, Spontaneous spin split bands, Magnetic anisotropy, Competing interactions, One and two-dimensional magnets, Spin dependent transport in magnetic metals - Anisotropic magnetoresistance, Giant magnetoresistance, Spin dependent tunneling, Tunneling magnetoresistance, Spin-Orbit interaction and Hall effects - Spin Hall Effect and Inverse Spin Hall Effect; Spin injection phenomena - Spin Transfer Torque, Spin injection magnetization reversal; High frequency phenomena.

PYL653 Semiconductor Electronics

3 credits (3-0-0)

Pre-requisites: PYL563 or equivalent

PYL655 Laser Physics

3 credits (3-0-0)

Pre-requisites: PYL560

PYL656 Microwaves

3 credits (3-0-0)

Pre-requisites: PYL552

PYL657 Plasma Physics

3 credits (3-0-0)

Pre-requisites: PYL552

Introduction to plasma, Debye shielding, Single particle motion in E and B fields, Mirror confinement, Plasma oscillations, Waves in unmagnetized plasmas, Solitons, Two stream instability, Rayleigh Taylor instability, Vlasov equation and Landau damping, Waves in magnetized plasmas (fluid theory), Plasma production & characterization, Plasma processing of materials, Laser driven fusion, Cerenkov free electron laser, Applications to astrophysics and astronomy.

PYD658 Mini Project

3 credits (0-0-6)

PYL658 Advanced Plasma Physics

3 credits (3-0-0)

Pre-requisites: PYL657

Nonlinearity and dispersion, solitary waves and solitons, Korteweg-deVries (kdv) equation, Electromagnetic (EM) radiation from free charges, Absorption of em waves in plasmas, Radiation by coulomb collisions, Plasma based Terahertz radiation generation, Hall thrusters, Rayleigh-Taylor instability, Resistive instability, Electron transport, Waveguide modes in the presence of plasma, Ponderomotive force, wakefield, Particle acceleration, Dusty plasma, Current flow in dust grains, Waves in dusty plasma.

PYL659 Laser Spectroscopy*3 credits (3-0-0)*

Review of lasers as spectroscopic source, Absorption spectroscopy, high sensitive methods, cavity ring down spectroscopy, Doppler limited spectroscopy: Photo-ionization and Photo-acoustic spectroscopy, Laser-induced breakdown spectroscopy (LIBS), Laser induced fluorescence spectroscopy, Nonlinear spectroscopy: linear and nonlinear absorption, saturation spectroscopy two-photon and multi-photon spectroscopy, Laser Raman spectroscopy: Stimulated Raman spectroscopy, Coherent anti-Stokes Raman spectroscopy (CARS), Time-resolved spectroscopy: short pulse generation and detection, life time measurements, pump-and-probe techniques, Time-resolved absorption, fluorescence and Raman spectroscopy, Applications of laser spectroscopy: single molecule detection, trace level detection of explosives and hazardous gases, LIDAR.

PYL701 Physical Foundations of Materials Science*3 credits (3-0-0)**Overlap with : PYL303*

Imperfections in solids: Point defects, thermodynamics of point defects. Dislocations: Grain Boundaries: Low and high angle grain boundaries. Phase Transformations: Kinetics of phase transformations, homogeneous and heterogeneous nucleation, kinetic considerations of solid-state transformations. Diffusion: Diffusion Mechanisms, Steady and non-steady state diffusion, factors influencing diffusion. Phase Diagrams: Unary phase diagram, Gibbs Phase Rule, Binary Isomorphous Systems, Lever Rule, interpretation of phase diagrams, determination of phase amounts, Equilibrium and non-equilibrium solidification, Binary Eutectic Systems, Equilibrium Diagrams having intermediate phases or compounds, Eutectoid and Peritectic Reactions, Congruent Phase transformations, Ternary phase diagrams. Microstructural and Property changes in Iron-Carbon Alloys. Corrosion and degradation of materials: Electrochemical Corrosion of Metals, Galvanic cells, Corrosion rates, Corrosion reactions, passivation, types of corrosion, Mechanisms of oxidation, oxidation rates, corrosion control. Materials Selection and Design Considerations.

PYP701 Solid State Materials Laboratory I*3 credits (0-0-6)*

This laboratory course is designed to make the students familiar with fundamental experiments related with materials synthesis and their primary characterization. Experiments are based on materials synthesis by solid-state reaction route, Spray-pyrolysis, spin and dip coating, thermal evaporation and sputtering, Dry and Wet Oxidation of Silicon, Understanding of binary eutectic phase diagrams, phase transitions, etc and study of the optical, electrical, semiconducting and dielectric properties of the synthesized materials. Simulation experiments to understand the properties of solid state materials (e.g. ion-matter interaction, properties of low dimensional materials and band structure estimation) are also included.

PYL702 Physics of Semiconductor Devices*3 credits (3-0-0)**Overlap with : PYL201*

Charge carriers in semiconductors: Intrinsic and extrinsic semiconductors, position of Fermi energy level. Carrier transport phenomenon: Carrier drift and diffusion, Hall effect. Carrier generation and recombination.

PN junction: Energy band diagram, electrostatics of pn junction, PN junction current, ideal current-voltage relationship, junction breakdown mechanisms, heterojunctions. Metal-semiconductor contacts: Schottky barrier diodes, current transport in Schottky diodes, I-V characteristics, Ohmic contacts. MOS structure: Ideal MOS structure, energy band diagrams under accumulation, depletion and inversion conditions, C-V characteristics, various oxide charges in Si/SiO₂, MOS and their effect on C-V graph, MOSFET, basics about the operation of a MOSFET, I-V relationships of a MOSFET, non ideal effects. Optical devices: Basics of Solar cells and photodetectors.

PYP702 Solid State Materials Laboratory II*3 credits (0-0-6)*

In this course, the emphasis is given on some advanced experiments

related with materials characterization, such as X-ray diffraction, X-ray fluorescence determination of transition temperature in a high temperature superconductor frequency dependence of dielectric constants Lock-in detection technique, Solar cells, Minority carrier life-time measurements, capacitance-voltage measurements on semiconductor devices, current-voltage characteristics of varistors, synthesis and electrical characterization of thermistors, disaccommodation factor in ferrites, etc.

PYL703 Electronic Properties of Materials*3 credits (3-0-0)**Overlap with : PYL102*

Drude and Sommerfeld theory of metals, Periodic Potential, Bloch's theorem, Kronig-Penney Model and Origin of bands, example of real band structure, Ferromagnetism, Molecular field theory, Exchange interactions, Band theory of ferromagnetism, Ferrimagnetism, Ferrites, Molecular field theory for ferrimagnets, Magnetic Domains, Type of Domain walls, Structure of domain walls, Soft and Hard magnetic materials, Spin waves, Magnon dispersion relation, Introduction to nanomagnetism, Dielectric constants of solids and liquids, Clausius-Mossotti relation, dielectric dispersion and losses, piezo, ferro- and pyroelectricity, Optical constants, atomistic theory of optical properties, quantum mechanical treatment, band transitions, dispersion, plasma oscillations and excitons.

PYL704 Science and Technology of Thin Films*3 credits (3-0-0)**Overlap with : PYL116*

Kinetic Theory of Gases and basics of vacuum science and technology, Physical Vapor Deposition - Hertz Knudsen equation; mass evaporation rate; Knudsen cell, Directional distribution of evaporating species, Evaporation of elements, compounds, alloys, Raoult's law, Homogenous and Heterogenous Nucleation, capillarity theory, atomistic and kinetic models of nucleation, basic modes of thin film growth, stages of film growth & cluster coalescence. E-beam beam evaporation, Molecular beam epitaxy and Pulsed Laser Deposition, Epitaxy-homo, hetero and coherent epilayers, lattice misfit and imperfections, epitaxy of compound semiconductors, scope of devices and applications, Glow Discharge and Plasma, Sputtering-mechanisms and yield, dc and rf sputtering, Bias sputtering, magnetically enhanced sputtering systems, reactive sputtering, Hybrid and Modified PVD- Ion plating, reactive evaporation, ion beam assisted deposition, Chemical Vapor Deposition - reaction chemistry and thermodynamics of CVD; Thermal CVD, Laser & plasma enhanced CVD, Atomic layer deposition, Electrodeposition, Spray pyrolysis.

PYL705 Nanostructured Materials*3 credits (3-0-0)*

Introduction and importance of nanostructured materials. Differences in the properties of bulk, nanoparticles, quantum dots, clusters, superlattices and nanostructured layers. Quantum confinement, surface enhanced properties, effective mass and tight binding approximations. Properties of 0D, 1D, 2D and superlattice structures. Plasmonic and optical properties of metal nanoparticles, Properties of magnetic nanoparticles, Structure and physical properties of nanomaterials. Chemical and physical methods for low dimensional growth with size control and size selection. Synthesis methods and growth mechanism for nanorods and nanowires. Growth and properties of graphene and other monolayer materials. Application of semiconductor, metal and magnetic nanoparticles. Application of nanostructures in catalysis, solar cell, resistive memory, thermoelectric, photoelectrochemical and sensor devices.

PYL707 Characterization Techniques for Materials*3 credits (3-0-0)**Pre-requisites: PYL563 (for MSc), PYL114 (for UG)*

Introduction to structure property correlation in materials, basic crystallography revision in 2-3 classes, k-space, X-ray diffraction methods, Reitveld refinement method and its fundamentals, Ewald sphere, Transmission electron microscopy in diffraction mode-selected area diffraction, Indexing of Selected area diffraction

patterns, Microstructural investigations using Scanning Electron Microscopes and Transmission electron microscopes, Kinetics of phase transformations in solids - Thermal Analysis using Differential Thermal Analysis and Differential Scanning Calorimetry, other techniques like Thermogravimetric analysis, Dynamic mechanical thermal analysis, Thin film DSC, Modulated DSC, Raman and Micro Raman Spectroscopy, Photoluminescence spectroscopy (iv) Material compositional analyses like Energy Dispersive X-ray(EDX) and Electron Probe Micro Analysis (EPMA).

PYL723 Vacuum Science and Cryogenics

3 credits (3-0-0)

Overlap with : PYL301

Behavior of Gases; Gas Transport Phenomenon, Viscous, molecular and transition flow regimes, Measurement of Pressure, Residual Gas Analyses; Production of Vacuum - Mechanical pumps, Diffusion pump, Getter and Ion pumps, Cryopumps, Materials in Vacuum; High Vacuum and Ultra High Vacuum Systems; Leak Detection. Cryogenic Fluids - Helium 3, Helium 4, Superfluidity, Liquefaction of Helium, Experimental Methods at Low Temperature: Closed Cycle Refrigerators, Cryostat systems based on He4 and He3, He3-He4 dilution refrigerator, Pomeranchuk Cooling, Magnetic Refrigerators, Thermoelectric coolers; Cryostat Design: Cryogenic level sensors, Handling of cryogenic liquids, Cryogenic thermometry.

PYL724 Advances in Spintronics

3 credits (3-0-0)

Overlap with : PYL422 and PYL652

Spin dependent transport in magnetic metals - Anisotropic Magnetoresistance, Giant Magnetoresistance, Spin dependent tunneling, Tunneling magnetoresistance, Spin-Orbit interaction and Hall effects –Spin Hall Effect and Inverse Spin Hall Effect; Spin injection phenomena and applications - Spin Transfer Torque, Spin injection magnetization reversal; High frequency phenomena; Spin Transfer Torque applications, Dilute magnetic semiconductors, Spintronic properties of ferromagnetic semiconductors, Materials for Spin Electronics, Spintronic devices and their applications.

PYL725 Surface Physics and Analysis

3 credits (3-0-0)

Surface structure, stability and reactivity, surface crystallography, surface stress, reconstructions and relaxation, surface sensitivity, clean surface preparation, physisorption, chemisorption, Langmuir, kinematics and dynamics of surface processes, properties of interfaces, adhesion and segregation, surface diffusion, chemical shift in electronic structure, surface states, plasmons, chemical potential/work function, experimental methods for surface structure: photoemission spectroscopy (PES), inverse photoemission spectroscopy (IPES), low energy electron diffraction (LEED), Reflection high energy electron diffraction (RHEED), Auger electron spectroscopy (AES), Secondary ion mass spectroscopy (SIMS), scanning tunneling microscopy (STM), Grazing incidence XRD, x-reflectivity (XRR), scanning electron microscope (SEM), electron energy loss spectroscopy (EELS), etc.

PYL726 Semiconductor Device Technology

3 credits (3-0-0)

Silicon wafer fabrication and oxidation techniques, Growth kinetics and oxide measurement techniques, defects in silicon and silicon dioxide, interface defects, polysilicon, silicon nitride and silicide formation, Lithography and etching techniques, diffusion and ion implantation, modeling and measurement of dopant profile, Thick and thin film device technology, Processes involved in ink preparation, screen printing, laser trimming, mounting, mask making and packaging, Thin film deposition, metallization etc.

PYL727 Energy Materials and Devices

3 credits (3-0-0)

Importance of energy materials and devices in present technology. PV materials and devices: Definition and basic physical quantities; Energy band diagram and operation of Schottky, homojunction and heterojunction solar cells. Amorphous silicon and thin film based solar

cell devices. Physics of tandem solar cell devices. New generation up conversion and down conversion devices. Materials for Si based solar cell, thin film solar cells, role of nanomaterials, dye sensitized solar cells. Introduction to PV panels, domestic and industrial applications.

Materials and device concept for thermoelectric devices, Methods for improving the thermoelectrical properties, application for heating and cooling applications. Operation of photoelectrochemical cell for hydrogen production, Energy band and materials requirements.

PYL728 Quantum Heterostructures

2 credits (2-0-0)

Semiconductor heterostructures, Quantum confined systems, Electron transport in quantum structures, 2DEG, Excitons in quantum structures, Quantum confined Stark effect, Integer Quantum Hall effect, quantum well and quantum cascade lasers, quantum well infrared photodetectors (QWIPD), resonant tunneling devices (RTD), high electron mobility transistors (HEMT), quantum interference transistors (QIT) and hot electron transistors (HET).

PYL729 Nanoprobe Techniques

1 credit (1-0-0)

Historical perspectives for invention of STM, Optical & Electron microscopy, Atom-scale tunnelling, Imaging atomic states, STM Instrumentation, Imaging modes, Constant current, Constant height, Feedback circuitry, surface topography, local density of the states, Single molecule vibrational spectroscopy, Image processing and analysis, Atomic Force Microscopy, Capacitance detection system, Optical detection systems, Imaging modes, Representative applications in biological sciences, Force Spectroscopy, Interpreting force curve, Adhesion, Nanoindentation, Magnetic Force Microscopy, Scanning Capacitance Microscopy, Thermal Methods at the Nanoscale, Dip-pen lithography, Near field Scanning Optical Microscopy, Hard X-ray nanoprobe.

PYL739 Computational Techniques for Solid State Materials

3 credits (3-0-0)

Pre-requisites: PYL563/PYL114 or equivalent

PYL740 Advanced Condensed Matter Theory

3 credits (3-0-0)

Pre-requisites: PYL563/PYL114 or equivalent

Quantum Fields and their roles in describing collective modes. Particle creation and annihilation operators: Commutation relations for Bosons and Fermions. Second quantization. Equivalence with the many body Schroedinger Equation. Identical Conserved particles in equilibrium and thermodynamic properties, Simple Examples of Second Quantization, Bosonic and Fermionic systems. Cooper instability and BCS Hamiltonian, Mean field description of BCS condensate, Quasiparticle excitation and Bogoliubov de-Gennes theory. Phase transition and broken symmetry, Order parameter concept, Landau theory and Landau Ginzburg theory and some examples from condensed matter Spin systems and magnetism, Heitler London theory and Heisenberg model, Ferromagnets, Spin waves, Antiferromagnets, Spin-chains.

PYL741 Field Theory and Quantum Electrodynamics

3 credits (3-0-0)

Quantization of free fields; Discrete symmetries; Gauge symmetries; QED; Elementary processes; Higher order effects; Renormalization; Novel effects of QED.

PYL742 General Relativity and Introductory Astrophysics

3 credits (3-0-0)

Overlaps with : PYL332

PYL743 Group Theory and its Applications

3 credits (3-0-0)

Concept of a group, multiplication tables, cyclic and permutation groups, subgroups, cosets, Isomorphism and Homomorphism, conjugate elements and classes, normal sub-groups and factor

group, direct product of groups, Group representations, Unitary and Irreducible, representations, Schur's Lemmas, orthonormality theorems, Character tables, Basis functions for irreducible representations. Continuous groups, Lie groups, The rotation group, Special orthogonal and unitary groups, crystallographic point groups and their representations. Applications in quantum mechanics and solid state physics.

PYL744 High Energy Physics

3 credits (3-0-0)

Overlaps with : PYL433

Fundamental interactions; QED; QCD; Marshak-Sudarshan theory of weak interactions; Parity violation; Hgg's mechanism; Glashow-Salam-Weinberg model; The standard model of particle physics; Open problems.

PYL745 Advanced Statistical Mechanics

3 credits (3-0-0)

Pre-requisite: PYL558/PYL202/equivalent

Review of basic thermodynamics, Thermodynamic potentials, Equation of state. Theory of ensembles, Density matrix. Thermodynamics of phase transitions, Concept of thermodynamic stability, Metastability and instability, Van der Waal equation of state, Phase coexistence: and Gibbs phase rule. Lattice models to describe phase transition e.g. Ising model, Heisenberg model Landau theory of second order phase transitions, Scaling hypothesis, Critical exponents and universality classes, Spatial correlation, Correlation length, Importance of fluctuations near critical point. Mean Field theory, Transfer matrix method. Concept of renormalization group. Ising model, Renormalization in one dimension. Related numerical methods, Monte-Carlo simulations of spin systems.

PYL746 Non-equilibrium Statistical Mechanics with Interdisciplinary Applications

3 credits (3-0-0)

Pre-requisite: PYL558/PYL202/equivalent

Review of equilibrium systems. Systems out of equilibrium, Kinetic theory of gases, Boltzman equation and its application to transport problems, Master equation and irreversibility. Time correlation functions, linear response theory, Kubo formula, Onsager relations. Random walks, Brownian motion and diffusion, Langevin equation, Fluctuation dissipation theorem, Einstein relation, Fokker-Planck equation. Ratchets, Driven diffusive systems. Fluctuation theorems, Jarzynski Equality. Percolation, Polymers, Soft condensed matter systems. Biological systems, Applications to Molecular motors, Stochasticity in gene expression. Stochastic growth models. Monte-Carlo simulations of Random walks and their applications to polymers, Percolation, Diffusion limited aggregation and other growth models.

PYL747 Non-linear Optics

3 credits (3-0-0)

Pre-requisite: PYL560

Wave propagation in anisotropic media. Origin of optical nonlinearity, Nonlinear optical polarization; Second order and third order processes; Nonlinear optical wave equation; Second order nonlinear processes; Second harmonic generation, difference and sum frequency generation, Phase insensitive and phase sensitive optical parametric amplifiers, Spontaneous parametric down conversion; Birefringence and quasi phase matching; Optical parametric oscillators. Third order nonlinear processes; Third harmonic generation, Self phase modulation, Cross phase modulation and four wave mixing; Impact of nonlinear effects in lightwave communication systems; supercontinuum generation; Phase conjugation and applications, Stimulated Raman and Brillouin scattering; Applications of stimulated processes. Electro optic, photorefractive and acousto optic effects and their applications, Ultrafast and intense field nonlinear optics. Special topics.

PYL748 Quantum Optics

3 credits (3-0-0)

Pre-requisite: PYL556/PYL112

HBT effect, Quantization of the EM field, Quantum states of light, correlation functions, Detection of quantum light and techniques, coincidence-counting, Phase-sensitive detection, Quantum treatment of linear optics, Quantum light by non-linear optical processes, SPDC, Signatures of quantum behaviour, Landmark experiments in quantum optics, Applications: Laser cooling and BEC, Ion trapping, CPT, EIT, Slow light, Introduction to quantum communication: Quantum teleportation, Entanglement swapping, Quantum repeaters, Quantum cryptography.

PYL749 Quantum Information and Computation

3 credits (3-0-0)

Basic classical and Quantum mechanics; Basic information theory; Bits, Qubits and ebits; Non-locality and entanglement; Quantum gates and circuits; Teleportation, Superdense coding, Quantum oracles; Quantum algorithms; Quantum encryption; Quantum error correction; Quantum computers.

PYL751 Optical sources, photometry and metrology

3 credits (3-0-0)

Eye and vision: Visual system, sensitivity, acuity; Radiometry and Photometry: Radiometric quantities and their measurements, Photometric quantities, Radiation from a surface; Brightness and luminous intensity distribution; Integrating sphere; Illumination from a line, surface and volume sources; Colorimetry: Fundamentals, trichromatic specifications, Colorimeters, CIE system; Conventional light sources: Point and extended sources; Incandescent, fluorescent, discharge lamps; LEDs; Lighting fundamentals, Optical detectors; Detector characteristics, Noise considerations, single & multi-element detectors, CCDs.

Optical metrology: Surface inspection, optical gauging and profiling, Techniques for non-destructive testing, Moire self imaging and speckle metrology, Sensing elements.

PYL752 Laser systems and applications

3 credits (3-0-0)

Review of Laser theory, properties of laser radiation, and laser safety; CW lasers systems: Ruby-, Nd:YAG- and Nd:Glass lasers, DPSS lasers, fiber lasers, gas lasers, Pulsed lasers: ns, ps, and fs lasers, excimer-, dye-, X-ray- and free-electron lasers; Semiconductor lasers: DH, QW, QCL, VCSEL, DFB- and DBR lasers; Application of lasers in data storage, communication and information technology; Laser applications in optical metrology; Surface profile and dimensional measurements; Laser Applications in material processing and manufacturing; 3D-printing, marking, drilling, cutting, welding, hardening and manufacturing; Laser Doppler velocimetry, LIDAR, laser spectroscopy, LIF, LIBS, Bio-medical applications of lasers, Laser tweezers and applications, laser applications in defense.

PYL753 Optical systems design

3 credits (3-0-0)

Gaussian theory of optical system; Aberrations: Transverse ray and wave aberrations; Chromatic aberration; Third order aberrations; Position and shape factors; Meridional ray tracing; Paraxial rays and first order optics; Primary chromatic aberration: Achromat doublet, Triplet and dialyte, tolerances, Chromatic aberration at finite aperture; Spherical aberration: surface contribution formulas; Spherically corrected achromat; Oblique pencils : Tracings of oblique meridional and skew rays; Coma and sine condition; Image evaluation: Geometric OTF, Strehl ratio, spot diagram; definition of merit function; Cooke Triplet and its derivatives; Double Gauss lens, Introduction to zoom lenses and aspherics, Examples of modern optical, GRIN optics.

PYL755 Basic optics and optical instrumentation

3 credits (3-0-0)

Reflection and refraction of plane waves and by spherical surfaces; Lens aberrations; Polarization and Polarizing components; Diffraction: diffraction by single and multiple slits and circular aperture, Gaussian beams, Interference: two beam and multiple beam interference.

Interferometers: Shearing and Scanning interferometers, interferometric instrumentation for testing, Polarization interferometers; Spectroscopic

instrumentation, Fourier transform spectroscopy; Imaging and super resolution imaging, near-field imaging techniques; Adaptive optics; Wavefront sensing and correction, reconstruction, Opto-medical instruments; optical coherence tomography, Infrared instrumentation; I.R. telescopes, focal plane arrays; Light field camera, Space optics; Satellite cameras, high-resolution radiometers, space telescopes, space based sensors;.

PYL756 Fourier optics and holography

3 credits (3-0-0)

Signals and systems, Fourier Transform(FT), Sampling theorem; Diffraction theory; Fresnel-Kirchhoff formulation and angular spectrum method, brief discussion of Fresnel and Fraunhofer diffraction, FT properties of lenses and image formation by a lens; Frequency response of a diffraction-limited system under coherent and incoherent illumination, OTF-effects of aberration and apodization, comparison of coherent and incoherent imaging, super-resolution; Techniques for measurement of OTF; Analog optical information processing: Abbe-Porter experiment, phase contrast microscopy and other simple applications; Coherent image processing: VanderLugt filter; joint-transform correlator; pattern recognition, Synthetic Aperture Radar.

Basics of holography, in-line and off-axis holography; transmission and reflection holograms, Amplitude and phase holograms, Recording materials. Thick and thin holograms.

PYL757 Statistical and Quantum optics

3 credits (3-0-0)

Overlaps with : PYL748

Probability theory, generating function, characteristic function; Analytic signal representation, correlation and spectral properties, Temporal, spatial and partial coherence, law of interference, spectral interference, Coherent mode representation, Propagation of coherence; Higher order correlations; photodetection probability, Mandel's photon counting formula; Intensity interferometry, speckle statistics and applications, Field quantization, number states, coherent states, Glauber-Sudarshan representation, tests for non-classicality, quantum correlations, two photon coherence function and coincidence count rate, quantum treatment of beamsplitter and simple interferometers.

PYL758 Advanced Quantum optics and applications

3 credits (3-0-0)

Quantization of the EM field, Quantum states of light, Correlation functions, Photodetection techniques, Generation of quantum light, Detection of quantum light, coincidence-counting, phase-sensitive detection, quantum treatment of linear optics, Quantum light by non-linear optical processes, signatures of quantum behaviour, Squeezed states and applications, Landmark experiments in quantum optics, light-matter interaction, Quantum memories, Experimental quantum communications : Quantum teleportation, entanglement swapping, quantum repeaters.

PYL759 Computational optical imaging

3 credits (3-0-0)

Revision of Fourier optics and basic concepts in optical imaging, mathematical preliminaries on inverse problems in imaging, compressive imaging, multi-view imaging systems, point-spread function engineering, phase retrieval, interferometric imaging methods such as digital holography and optical coherence tomography, imaging through turbulent media, super-resolution through structured illumination, correlation/ghost imaging.

PYL760 Biomedical optics and Bio-photonics

3 credits (3-0-0)

Introduction to Biophotonics: Photobiology: Light-tissue interactions and light induced effects in Biological systems.

Optical properties of tissue – absorption, scattering, diffraction, and emission.

Spectroscopy: Fluorescence, Raman and diffuse reflectance spectroscopy: Physics and their applications.

Basic principles of optical imaging and spectroscopy systems. Principles

of standard optical microscopy/fluorescence microscopy/ endoscopy and instrumentation.

Confocal microscopy: Principles and instrumentation and applications. Two-photon and multi-photon microscopy.

Physics of optical tweezers and its applications in biology. Bio-medical applications of lasers: Laser scissors, Photo-dynamic therapy.

Optical coherence tomography (OCT): Physics, imaging concepts and applications. Photo-acoustic tomography (PAT): physics, imaging concepts and applications.

Quantitative phase microscopy; Principles and imaging concepts, Imaging beyond diffraction limit; SIM, STED, NSOM, Image processing and image recovery methods.

PYL761 Liquid Crystals

3 credits (3-0-0)

Nematic, Cholesteric, Smectic and Ferro-electric liquid crystals, Landau-de Gennes and Frank-Oseen free energy, Nematic-isotropic phase transition, Landau theory and Maier-Saupe theory, Kerr effect, Pockel effect, Polarizing Microscopy, Differential Scanning calorimetry, Dielectric Spectroscopy, Bent core liquid crystals, Twist bent liquid crystals, Display applications.

PYP761 Optical fabrication and metrology laboratory

3 credits (0-0-6)

Trepanning, Grinding, Curve generation, smoothing and polishing, Centering and Edging, optical coating, Autocollimator, Newton interferometer, Twyman-Green interferometer, Shack Hartmann Sensor and Moire, and Talbot interferometry for measurement of optical performance parameters of the optical elements, Spherometers, Abbe refractometer, White light, Fabry-Perot interferometers.

PYL762 Statistical Optics and Optical coherence theory

3 credits (3-0-0)

Review of probability and random variables. Probability and Statistics in Optics. Stochastic processes to represent optical fields. Ergodicity and stationarity, Auto-correlation, cross-correlation, and Wiener-Khinchin theorem, Gaussian and Poisson random processes. First-order properties of optical fields: Radiation from sources of any state of coherence. Monochromatic, polychromatic and broad light sources. Polarized, partially polarized and unpolarized thermal light and pseudo-thermal light. Second-order coherence theory in space-time domain: Temporal coherence and complex degree of self coherence. Spatial coherence and complex degree of mutual coherence, Cross-spectral density, propagation of mutual coherence, The Van Cittert-Zernike theorem and its application to stellar interferometry. Higher-order coherence theory: Hanbury-Brown and Twiss experiment, intensity-intensity correlation and Ghost imaging. Second order coherence theory in space-frequency domain: Concept of cross-spectral density, spectral degree of coherence, Wiener-Khinchin theorem, electromagnetic coherence, degree of polarization and applications. Applications of second-order coherence theory: Optical coherence tomography, stellar interferometry, Laser speckle and speckle metrology, Fourier transform spectroscopy, Partial coherence in imaging systems, Propagation through random inhomogeneous media.

PYP762 Advanced optics laboratory

3 credits (0-0-6)

Experiments related to recording and development of holograms, Laser Speckles, Fresnel hologram, Reflection and Rainbow hologram, Polarization, Spatial filtering, Digital holography, Optical security systems, Optical singularity, Nonlinear optical processes, Tomography, Profilometry, Polarizing microscope, Strain viewer.

PYP763 Computational Optics laboratory

3 credits (0-0-6)

Pre-requisite: PYL756

Ray tracing in optical systems with commercial software, Image handling in MatLab or similar environment for optics experiments, Simulation of Fresnel and Fraunhofer diffraction, Fourier transforms and applications in optics, Simulation of spatial filtering, matched filtering and pattern recognition, Simulation of Joint Transform and

Vander Lugt correlators, Synthesis of computer generated hologram and optical reconstruction, Simulation of recording and reconstruction of digital holograms, Interferogram analysis using Fourier and Phase shifting methods, Stoke's parameters of optical beams and plotting of polarization ellipse, Simulation of multi-beam interference for photonic crystal designs, Simulation of multi-beam interference for photonic crystal designs, Design Project.

PYP764 Advanced Optical Workshop

3 credits (0-0-6)

Development of metal optics, Infrared imaging, Fabrication of Total Internal Reflection Prisms, Measurement of thin coating, Fabrication of Shearing plate, Shearing interferometry, Talbot interferometry, Moire interferometry.

PYL770 Ultra-fast optics and applications

3 credits (3-0-0)

Overlaps with : PYL412

Generating and measuring Ultrashort Optical Pulses.- Ultra-Broadband Optical Parametric Amplifiers.- Advances in Solid-State Ultrafast Laser Oscillators.- Ultrafast Quantum Control in Atoms and Molecules.- Femtosecond Optical Frequency Combs.- Ultrafast Material Science Probed using Coherent X-Ray Pulses from High-Harmonic Generation.- Ultrafast Nonlinear Fibre Optics and Supercontinuum Generation.- Nonlinear Wavelength Conversion and Pulse Propagation in Optical Fibres.- Applications of Ultra-Intense, Short Laser Pulses.- Utilising Ultrafast Lasers for Multiphoton Biomedical Imaging.- Femtosecond Laser Micromachining.- Technology and Applications of THz waves, Ultrafast Nonlinear Microscopy.- Attosecond Generation.

PYL771 Green Photonics

3 credits (3-0-0)

Need for green photonics, Overview of solid-state lighting technologies and their advantages. Inorganic and Organic LEDs: Fundamentals, device physics, diode structures and operating principles. Materials for LEDs, OLEDs and PLEDs: phosphor materials and their characterisation. LEDs and OLED fabrication, encapsulation and packaging techniques. Electro-optical properties of LEDs and OLEDs; electric drive circuits, internal, external and power efficiency, spectral distribution, and encapsulants. Design and development of light out-coupling techniques. Photometry and colorimetry of LEDs and OLEDs. Free-form optics and design of LEDs and OLEDs based illumination systems: General lighting, traffic lights, automotive, street & flood lighting, and backlights for displays.

Sunlight Harvesting Technologies, Non-imaging Solar Concentrators and illuminators: Parabolic and Fresnel lens, Diffractive, Microoptics and Free-form optics for lighting and illumination engineering of day light saving, light guiding devices and diffuse lighting materials and devices.

Solar photovoltaics: Inorganic, Organic and Polymeric solar cells: Principles, Technology and Applications. Role of solar concentrators.

PYL772 Plasmonic sensors

3 credits (3-0-0)

Optical fiber, optical fiber sensors, characteristics and components of optical fiber sensors, Spectroscopic techniques, Modulation schemes; Physics of plasmons, surface plasmons at semi-infinite metal-dielectric interface, excitation of surface plasmons, surface plasmon resonance (SPR) condition, interrogation techniques; Theory of SPR based optical fiber sensors, N-layer model, excitation by meridional rays: on axis excitation, performance parameters: sensitivity, detection accuracy and figure of merit; SPR based sensing applications, refractive index and other analytes sensing, multichannel sensing, multianalyte sensing; Factors affecting performance of the sensor: fiber parameters, change of metal, high index dielectric material, probe design, temperature and ionic fluid.

PYL780 Diffractive and micro optics

3 credits (3-0-0)

Diffractive optics, Micro optics, Design of diffractive optics, Amplitude and Phase Diffractive Optics, Application of Diffractive optics, Fabrication of Diffractive and micro optics, Photo-Lithography,

Interferometric, profilometric and other testing techniques for Diffractive optics, Plastic optics, Injection Moulding of plastic optics, Applications of Micro optics in Beam shaping, MOEMS, Optical information technology and Aspheric optics, Freeform optics.

PYL790 Integrated Optics

3 credits (3-0-0)

Guided TE and TM Modes of Symmetric and Asymmetric Planar waveguides: Step-index and graded-index waveguides. Strip and channel waveguides, anisotropic waveguides, Marcattili's Method, Effective-Index method and perturbation method of analysis. Directional couplers, Coupled mode analysis of uniform and reverse delta-beta couplers. Applications as power splitters, Y-junction, optical switch; phase and amplitude modulators, filters, A/D converters, Y-splitters, Mode splitters, polarization splitters; Mach-Zehnder interferometer based devices, Acoustooptic waveguide devices. Arrayed waveguide devices, Nano-photonic-devices: Metal/dielectric plasmonic waveguides, Long and short range surface Plasmon modes supported by thin metal films, applications in waveguide polarizers and bio-sensing. Fabrication of integrated optical waveguides and devices. Waveguide characterisation, end-fire and prism coupling; grating and tapered couplers, Fiber pigtailling, Nonlinear effects in integrated optical waveguides.

JOP791 Laboratory-I (Fiber Optics and Opt. Comm. Lab)

3 credits (0-0-6)

PYL791 Fiber Optics

3 credits (3-0-0)

Overlaps with : PYL413 and PYL650

Rays and ray paths in optical fibers; Numerical aperture; Step index and graded index fibers; Attenuation in optical fibers; Modal analysis of symmetric planar waveguides; TE and TM modes, mode cut off, power flow: Linearly polarized (LP) modes in step-index optical fibers; Mode cutoff, single mode operation; Mode field diameter in single mode fibers, LP modes of infinitely extended parabolic medium, Intermodal dispersion in multimode fibers; Optimum profile fibers; Dispersion and chirping of pulses in single mode fibers, Dispersion compensation and dispersion tailoring; Birefringence in optical fibers, Polarization mode dispersion; Specialty fibers: Birefringent fibers, Photonic crystal fibers; Erbium doped fiber amplifiers and lasers; Fiber optic components: fiber Bragg gratings, directional couplers; Fiber fabrication and characterization techniques; OTDR, connectors and splices.

JOP792 Laboratory-II (Fiber Optics and Opt. Comm. Lab)

3 credits (0-0-6)

PYL792 Optical Electronics

3 credits (3-0-0)

Light propagation through anisotropic media, Electro optic effect and electro optic modulators and switches, Liquid crystal devices and spatial light modulators, Acousto optic effect, acousto optic tunable filter, acousto optic deflector, scanner and spectrum analyser, Basics of nonlinear optical effects, Second harmonic generation, phase matching, quasi phase matching, Sum and difference frequency generation, parametric amplification and parametric oscillation, Third order nonlinear optical effects, Self phase modulation and soliton formation, Cross phase modulation and four wave mixing, Stimulated Raman and Brillouin scattering. Nonlinear effects in optical fibers

JOL793 Selected Topics-I

3 credits (3-0-0)

PYL793 Photonic Devices

3 credits (3-0-0)

Overlaps with : PYL312

Review of Semiconductor Physics for Photonics: The Density of States $\rho(k)$ and $\rho(E)$; Density of States in a Quantum Well Structure; Carrier Concentration & Fermi Level; Quasi Fermi Levels. Semiconductor Optoelectronic Materials; Heterostructures, Strained-Layers, Bandgap

Engineering; p-n junctions; Schottky Junctions & Ohmic Contact.

Interaction of Photons with Electrons and Holes in a Semiconductor; Rates of Emission and Absorption; Amplification by Stimulated Emission; The Semiconductor Optical Amplifier. Quantum Confined Stark Effect and Franz-Keldysh Effect. Electro-absorption Modulator: Principle of Operation and Device Configuration. Light Emitting Diode: Device Structure and Output Characteristics, Modulation Bandwidth, Materials for LED, and Applications. White light LEDs.

Laser Diodes: Device Structure and Output Characteristics, Single Frequency Lasers; DFB, DBR Lasers, VCSEL, Quantum Well and Quantum Cascade Laser, Micro-cavity lasers. Modulation of Laser Diodes, Practical Laser Diodes & Handling.

Photodetectors: General Characteristics of Photodetectors, Impulse Response, Photoconductors, PIN, APD, Array Detectors, CCD, Solar Cell. Photonic Integrated Circuits.

JOL794 Selected Topics-II

3 credits (3-0-0)

JOS795 Independent Study

3 credits (0-3-0)

PYL795 Optics and Lasers

3 credits (3-0-0)

Overlaps with : PYL115, PYL311, PYL560 and PYL655

Review of basic optics: Reflection and refraction of plane waves; Polarization and polarizing devices; Diffraction: diffraction due to single slit and circular aperture, grating, Gaussian beam; Interference: two beam and multiple beam interference, Fabry-Perot interferometer, Michelson interferometer; Fourier optics and its applications, spatial frequency filters.

Interaction of light with matter, light amplification and oscillation, Laser rate equations, three level and four level systems, Line broadening mechanisms, Laser power around threshold, Optical resonators and resonator stability, Modes of a spherical mirror resonator, mode selection, Q-switching, mode locking in lasers, properties of laser radiation, laser systems and some applications of lasers.

JOV796 Selected Topics in Photonics

1 credit (1-0-0)

PYL800 Numerical and Computational Methods in Research

3 credits (3-0-0)

Solution of polynomial and transcendental equations, ordinary differential equations with initial conditions, matrix algebra and simultaneous equations, eigenvalues and eigenvectors of a real symmetry matrix, least square curve fittings, numerical integration, integral equations, ordinary differential equation with boundary conditions, Monte Carlo methods and random numbers.

JOD801 Major Project Part-I

6 credits (0-0-12)

PYD801 Major Project Part-I

6 credits (0-0-12)

JOD802 Major Project Part-II

12 credits (0-0-24)

PYD802 Major Project Part-II

12 credits (0-0-24)

PYD851 Major Project Part-I

6 credits (0-0-12)

PYD852 Major Project Part-II

12 credits (0-0-24)

PYS855 Independent Study

3 credits (0-3-0)

PYL858 Advanced Holographic techniques

3 credits (3-0-0)

Basic concepts in holography, Holographic displays and stereograms, Image holograms, White light, Rainbow holograms, Color holograms, Volume holograms, Diffraction efficiencies, Fourier Transform holograms, Pattern recognition, Correlators. Computer generated holography, Digital holography and its applications: Holographic interferometry, Holographic contouring, NDT of engineering objects, Optical testing, HOEs, Particle sizing, holographic Particle Image Velocimetry, Microscopy, Interferometry, Imaging through aberrated media, phase amplification by holography, Multifunction elements, diffusers, interconnects, couplers, scanners, Optical data storage, optical data processing, holographic solar concentrators, Associative memory.

PYL879 Selected Topics in Applied Optics

3 credits (3-0-0)

PYV881 Selected Topics – I

1 credit (1-0-0)

PYV882 Selected Topics – II

1 credit (1-0-0)

PYD883 Minor Project

3 credits (0-0-6)

PYL891 Fiber Optic Components and Devices

3 credits (3-0-0)

Pre-requisites : PYL413 or PYL650 or PYL791

Review of optical fiber properties: step and graded index fibers, multimode, single mode, birefringent, photonic crystal and holey fiber: Directional couplers: Analysis, fabrication and characterization: Fused and polished fiber couplers application in power dividers, wavelength division multiplexing, interleavers and loop mirrors: Fiber half-block devices and application in polarizers, and wavelength filters. Fiber grating: Short and Long period gratings, Analysis, fabrication and characterization: application in add-drop multiplexing, gain flattening, dispersion compensation and wavelength locking and sensing. Polarization effects in Optical fibers, Fiber polarization components: Fiber optic wave-plates, polarization controllers and associated micro-optic components like isolators and circulators; Optical fiber sensors: Intensity, phase, polarization and wavelength-shift based sensors, applications in various disciplines.

PYL892 Guided Wave Photonic Sensors

3 credits (3-0-0)

Pre-requisites : PYL413 or PYL650 or PYL790 or PYL791

Review of propagation characteristics of single and multimode optical Fibers and Integrated optical Waveguides. Surface plasmon modes supported by a single metal/dielectric interface and dielectric/metal/dielectric waveguides. Fiber Optic Sensors: Intensity, phase, polarization and wavelength modulation schemes. Intensity based sensors: using microbends and tapers in multimode fibers, Mach-Zehnder interferometer sensors, Fiber Optic gyroscope, Fiber optic current sensor, Photonic crystal based sensors. Sensors based on Bragg and Long period gratings in Fiber and integrated optical waveguides, Sensors based on modal interference: Applications in temperature, strain and refractive index sensing. Distributed Sensors based on Raman and Brillouin Scattering. Surface Plasmon Resonance (SPR) bio-sensors based on Krechman and Otto configurations, coupling with optical fiber modes, Grating coupled, Localised SPR, Plasmonic nanoparticles, interferometry. Signal processing, Noise factors in sensors and sensor networking.

Department of Textile Technology

TXL110 Polymer Chemistry

3 credits (3-0-0)

Pre-requisites: CML100

The course will deal with chain and step growth polymerization methods, polymer's macromolecular architecture, molecular weight of polymers, copolymerization, cross-linked polymers, general structure and characteristics of polymers, properties of fiber forming polymers and their applications.

TXL111 Textile Fibres

3 credits (2-0-2)

Pre-requisites: PYL100/MTL100/CML100

Classification of fibres. Basic structure of a fibre. General properties of a fibre such as moisture absorption, tenacity, elongation, initial modulus, yield point, toughness, elastic recovery. Relationship between polymer structure and fiber properties. Detailed chemical and physical structure of natural fibres: cotton, wool and silk, their basic properties. Introduction to important bast and leaf fibres. Basic introduction to Fibre spinning. Introduction Manmade and synthetic fibres: Viscose, Acetate, Acrylic, Nylon, polyester. High Performance Fibres.

Laboratory exercises would include experiments on fibre identification through physical appearance, microscopic (optical, SEM), and burning behaviour. Chemical identification through solvent treatment and elemental analysis.

TXL211 Structure and Physical Properties of Fibres

3 credits (3-0-0)

Pre-requisites: TXL110/TXL111/TXN100

Molecular architecture. Configuration. Conformation. Amorphous and crystalline phases. Glass transition. Crystallization. Melting. Structures in natural and synthetic fibres. Characterization techniques. Fibre properties. Moisture absorption properties. Mechanical properties. Fibre friction. Optical properties. Thermal properties.

TXL212 Manufactured Fibre Technology

3 credits (3-0-0)

Pre-requisites: TXL110/TXL111/TXN100

Polymer rheology in shear as well as extension. Polymer entanglements. Flow instabilities in polymer fluids. Principles of solidification. Heat and mass transfer. Melt spinning. Force and momentum balance in spinline. Stress induced crystallization. Experimental observations from melt spinning of polyamides and polyesters. Solution spinning. Dry and wet spinning. Transport phenomena. Kinetic and thermodynamic effects in solution spinning. Solution spinning of viscose and acrylic fibres. Dry jet wet spinning. Post spinning processes. Drawing and heat setting. Stress-strain-structure relationship. Effect of post spinning operations on fibre structure and properties. Spin finish applications. Introduction to electrospinning.

TXP212 Manufactured Fibre Technology Lab

1 credit (0-0-2)

Pre-requisites: TXL110/TXL111/TXN100

The laboratory experiments are planned to provide knowledge on fibre formation of selected synthetic polymers and the characterization of fibres/tapes produced. Melt-spinning, extrusion, wet spinning and dry-jet wet spinning techniques is used to produce fibres or tapes. The evaluation of structure through thermo-mechanical properties, polymer solution rheology and microscopic analysis of materials is carried out using established methods.

TXL221 Yarn Manufacture – I

3 credits (3-0-0)

Pre-requisites: TXL110/TXL111/TXN100

Impurities in natural fibres. Separation of trash and lint. Pre-baling operations for staple fibres. Purpose of opening, cleaning, mixing and blending of fibres. Blow room machinery and operating elements. Principles of fibre opening and cleaning in blow room. Transportation of fibre mass. Influence of process parameters on opening and cleaning. Analysis of opening and cleaning processes. Principles and methods of

fibre mixing and blending. Principles of carding. Machine elements and operations in card. Sliver formation, packing and fibre configurations in sliver. Objectives, principles and methods of roller drafting. Purpose and principle of condensation of fibres. Causes of mass variation of fibrous assembly and control. Automation and recent developments in blowroom, card and draw frames. Fibre opening, carding and drawing for wool, jute and other fibres. Modification in process parameters for processing blended fibres in blowroom, card and drawframe.

TXP221 Yarn Manufacture Laboratory – I

1 credit (0-0-2)

Pre-requisites: TXL110/TXL111/TXN100

Experiments related to the lecture course entitled "Yarn Manufacture I (TXL221)".

TXL222 Yarn Manufacture – II

3 credits (3-0-0)

Pre-requisites: TXL110/TXL111/TXN100

Fibre fractionation and combing. Preparation of fibre assembly for combing. Principle of operations in a rectilinear comber. Combing machine elements. Theory of fibre fractionation. Roving formation: Elements of roving frame, drafting, twisting and winding in speed frame, principle and mechanism of builder motion in speed frame. Yarn formation: Elements of ring frame, drafting, twisting and winding in ring frame, design aspects of spindles, rings and travelers, builder motion in ring frame. Spinning geometry. Twist and yarn strength. Yarn doubling : Purpose of doubling and plying of yarns, ring doubling, two-for-one and three for one twisting. New spinning methods: Principles of yarn formation in rotors, friction, airjet, vortex and electrostatic spinning. Yarn structure and property comparison.

TXP222 Yarn Manufacture Laboratory – II

1 credit (0-0-2)

Pre-requisites: TXL110/TXL111/TXN100

Experiments related to the lecture course entitled "Yarn Manufacture II (TXL222)".

TXL231 Fabric Manufacture – I

3 credits (3-0-0)

Pre-requisites: TXL110/TXL111/TXN100

Introduction to various fabric forming principles: weaving, knitting, nonwoven and braiding. Stages of woven fabric manufacturing: winding, warping, drawing and tying in and weaving. Winding: principles, precision and random winding, digicone winding, yarn tensioning and clearing. Warping: direct and sectional warping. Sizing: size materials, sizing machines, process and quality control, modern trends. Drawing and tying in. Basic fabric designs: plain, matt, rib, twill and satin, drafting and lifting plans. Primary motions of shuttle looms: cam shedding, cam designs, dobby and jacquard systems, picking systems, loom timing, beat up, sley eccentricity. Secondary and auxiliary motions: take up, let off, warp and weft stop and warp protecting motions.

TXP231 Fabric Manufacture Laboratory – I

1 credit (0-0-2)

Pre-requisites: TXL110/TXL111/TXN100

Experiments related to the theoretical paper TXL231.

TXL232 Fabric Manufacture – II

3 credits (3-0-0)

Pre-requisites: TXL110/TXL111/TXN100

Shuttleless looms: Principles of weft insertion in projectile, rapier, air-jet and water-jet looms, comparison of various weft insertion systems, principles of two phase, multiphase, circular and narrow fabric weaving. Leno weaving, Triaxial weaving. Knitting: Basic weft and warp knitted constructions, cams and needles, different weft and warp knitted structures and their properties, weft and warp knitting machines. Nonwovens: Definitions and classifications, production technology, selection criteria and important properties of fibres used, different types of webs and bonding techniques, production

and properties of needle punched, adhesive bonded, thermally bonded, hydroentangled, spun bonded and meltblown fabrics. Braided structures: Types of braiding processes, classification of braids, braid geometry, structure-property relationship, over braiding.

TXP232 Fabric Manufacture Laboratory – II

1 credit (0-0-2)

Pre-requisites: TXL110/TXL111/TXN100

Experiments related to the theoretical paper TXL232.

TXL241 Technology of Textile Preparation & Finishing

3 credits (3-0-0)

Pre-requisites: TXL110/TXL111/TXN100

Natural and added impurities in textiles. Singeing, desizing, scouring, bleaching, mercerisation and optical whitening of cotton. Combined preparatory processes Carbonisation, scouring and bleaching of wool, degumming of silk. Preparation of synthetic fibres and blends, heat setting. Machinery for preparation of textiles. Surfactants and their application. Introduction to chemical and mechanical finishes. Chemical finishes for hand modification. Biopolishing, easy care, oil, water and soil repellent finishes. Fire retardancy, antimicrobial finishes. Finishes for wool. Mechanical finishes like shrinkproofing and calendaring; Raising, sueding and emerising. Low liquor application techniques and machinery; Stenters and dryers.

TXP241 Technology of Textile Preparation & Finishing Lab

1.5 credits (0-0-3)

Pre-requisites: TXL110/TXL111/TXN100

Natural and added impurities in textiles. Singeing, desizing, scouring, bleaching, mercerization and optical whitening of cotton. Combined preparatory processes Carbonization, scouring and bleaching of wool, degumming of silk. Chemical finishes for hand modification. Bio-polishing, Resin finishing, Water and Oil repellent finishes. Fire retardant finish, Antimicrobial finish, Weight reduction of cotton.

TXL242 Technology of Textile Coloration

3 credits (3-0-0)

Pre-requisites: TXL110/TXL111/TXN100

The principles of dyeing and printing of textile materials. Basic characteristics of dyes, chemical structure of dyes, and classification of dyes. Dyeing equipment and the specific dyes and procedures used to dye textiles. Evaluation of Fastness. Methods of printing namely, roller, screen, transfer, ink jet and the preparation of printing paste. Direct, discharge and resist printing styles. Physical chemistry of fibre/fabric dyeing. Physicochemical theories of the application of dyestuffs to textile and related materials, including the thermodynamics and kinetic principles involved.

TXP242 Technology of Textile Coloration Lab

1.5 credits (0-0-3)

Pre-requisites: TXL110/TXL111/TXN100

The principles of dyeing and printing of textile materials. Dyeing equipment and the specific dyes and procedures used to dye textiles. Evaluation of Fastness. Methods of printing namely, screen, transfer, ink jet and the preparation of printing paste. Direct, discharge and resist printing styles.

TXD301 Mini Project

3 credits (0-0-6)

Pre-requisites: TXL211/TXL221/TXL222/TXL231/TXL232 and EC65

TXR301 Professional Practices

2 credits (0-1-2)

Pre-requisites: TXL211/TXL221/TXL222/TXL231/TXL232 and EC65

TXS301 Independent Study

3 credits (0-3-0)

Pre-requisites: EC65

TXL321 Multi and Long Fibre Spinning

3 credits (3-0-0)

Pre-requisites: TXL221/TXL222 and EC50

Blending of fibres during staple fibre spinning, Characteristics of manmade fibres and their spinnability. Blending at draw frame. Fundamentals of strictly similar yarns. Processing of manmade fibres and blends on staple fibre spinning system. Properties of blended yarns. Spinning of dyed fibres. Mélange yarns. Worsted /semi-worsted/ Woolen spinning. Jute and Flax Spinning. Tow to top Conversion. Bulk yarn. Spun silk yarn.

TXL331 Woven Textile Design

3 credits (3-0-0)

Pre-requisites: TXL231/TXL232 and EC50

Elements of woven design. Construction of elementary weaves; plain, twill, satin weaves and their derivatives. Rib and cord structures. Construction of standard woven fabrics; poplin, sheeting, denim, drill and jean, gabardine, granite, diamond and diaper weaves, Honey comb, Huckaback and Mockleno weaves. Colour effect on woven design. Dobby design, stripes and checks. Construction of jacquard design. Figuring with extra threads. Damasks and Brocades. Double cloths. Multilayer fabrics. Tapestry structures. Gauze and Leno structures. Whip cord and Bedford cord. Pique and Wadded structures. Terry pile structures. Velvet and velveteen. Axminster carpet structures. Indian traditional designs. Introduction to CAD for woven designs.

TXL341 Colour Science

2 credits (2-0-0)

Pre-requisites: TXL241/TXL242 and EC50

The course will deal with aspects of colour science that are important to the colour technologist in the day-to-day manufacture and control of coloured products in textile applications.

TXL361 Evaluation of Textile Materials

3 credits (3-0-0)

Pre-requisites: TXL211/TXL221/TXL222/TXL231/TXL232 and EC50

Introduction to textile testing; Sampling and basic statistics: Selection of samples for testing; Random and biased samples; Different types of sampling of textile materials; The estimation of population characteristics from samples and the use of confidence intervals; Determination of number of tests to be carried out to give chosen degree of accuracy; Test of significance of means and variance; Related numerical; Quality control charts and their interpretation; Standard tests, analysis of data and test reports, Correlation and coefficient of determination; Analysis of variance (ANOVA).

Testing methods: Measurement of length, fineness and crimp of fibres; Determination of maturity, foreign matter, and moisture content of cotton; Principles of AFIS, HVI etc.; Measurement of twist, linear density and hairiness of yarn; Evenness testing of silvers, rovings and yarns; Analysis of periodic variations in mass per unit length; Uster classimat; Spectrogram and V-L curve analysis; Tensile testing of fibres, yarns and fabrics; Automation in tensile testers; Tearing, bursting and abrasion resistance tests for fabrics; Pilling resistance of fabrics; Bending, shear and compressional properties of fabrics, fabric drape and handle (KESF, FAST etc); Crease and wrinkle behavior; Fastness characteristics of textiles; Matching of shade; Air, water and water-vapour transmission through fabrics; Thermal resistance of fabrics; Testing of interlaced and textured yarns; Special tests for carpets and nonwoven fabrics. Testing of special yarns (textured yarns, core yarn, ropes, braids etc). Testing of special fabrics (different types of nonwovens, carpets, different types of technical textiles like bullet proof fabrics, UV protective fabrics, EMS fabrics etc.).

TXP361 Evaluation of Textiles Lab

1 credit (0-0-2)

Pre-requisites: TXL211/TXL221/TXL222/TXL231/TXL232, EC50
Introduction to textile testing; Experiments related to the lecture course entitled "Evaluation of Textile Material".

TXL371 Theory of Textile Structures

4 credits (3-1-0)

Pre-requisites: TXL221/TXL222, TXL231/TXL232, EC50

Basic characteristics of yarn structure. Koehlin's theory of relations among yarn count, twist, packing density, and diameter. Helical model of fibres in yarns. Radial migration of fibres in yarns. Tensile behavior of yarns. Theory of yarn mass variation. Theory of plied yarn. Basic characteristics of fabric structure. Flexible and rigid thread models of woven fabric geometry. Tensile, bending, and shear deformation of woven fabric. Geometry of knitted and nonwoven fabrics.

TXL372 Speciality Yarns and Fabrics

2 credits (2-0-0)

Pre-requisites: TXL221/TXL222 and TXL231/TXL232 and EC50

Design, manufacture, characterization and applications of specialty yarns. Hybrid yarns. High bulk yarns. Electro-conductive yarns. Technical sewing threads. Coated yarns. Reflective yarns. Elastomeric yarns. Yarn quality requirement. Yarn preparation & production technology. Structural design, properties-Performance and applications of specialty fabrics. Denim. Pile fabrics. Narrow fabrics. 3D fabrics. Spacer fabrics. Profiled fabrics. Contour fabrics. Polar fabrics. Spiral fabrics. Multi-functional fabrics.

TXL381 Costing and its Application in Textiles

4 credits (3-1-0)

Pre-requisites: TXL211/TXL221/TXL222/TXL231/TXL232 and EC50

Importance of costing. Material costing in textile industry. Methods of inventory costing. Economic order quantity, price discount, safety stock, lead time. Allocation of labour cost-shift premium, overtime, idle time, rush orders in garment industry. Allocation of overheads in composite mills. Job order costing in garment industry. Economic batch quantity. Process costing in mill. Unit cost of yarns, fabric and processing. Joint and by-product costing. Absorption costing. Variable costing for decision making. Profit planning in textile industry, variation of price, costs etc., breakeven capacity. Standard costs of fibres, yarns, labour etc. HOK, OHS, UKG etc. Cost variance analysis-iteration of actual costs of fibre, labour and overhead with respect to standard costs. Work allocation to spinner. Balancing of machine for optimizing product mix in a spinning mill. Financial information-balance sheet, profit/loss account, balance sheet. Ratio analysis.

TXD401 Major Project Part I

4 credits (0-0-8)

Pre-requisites: TXL361/TXP361/TXL371/TXL372 and EC100

Formation of project team (up to two students and up to two faculty guides); formulation of work plan completing targeted work for the semester and presentation of complete work of progress for award of grade.

TXD402 Major Project Part II

8 credits (0-0-16)

Pre-requisites: EC100 and Minimum B Grade in TXD401

Continuation of planned tasks started in Major Project Part I, TXD411, to completion, thesis writing and presentation of complete work of progress for award of grade.

TXL700 Modelling and Simulation in Fibrous Assemblies

3 credits (2-0-2)

Pre-requisites: TXL211/TXL221/TXL222/TXL231/TXL232 and EC 75

Introduction to Textile Modelling and Simulation, types of model.

Curve Fitting Techniques: Prediction of mechanical properties of fibrous assemblies.

Artificial Neural Network (ANN): Mathematical models of artificial neurons, ANN architecture, Learning rules, Back propagation algorithm, Applications of ANN. Fuzzy Logic: Crisp and fuzzy sets, Operations of fuzzy sets, Fuzzy rule generation, Defuzzification, Applications of fuzzy logic. Genetic Algorithm (G.A.): Basics of G.A., G. A. in fabric engineering.

Stochastic and Stereological Methods: Random fibrous assemblies, anisotropy characteristics, two and three-dimensional fibrous assemblies. Statistical Mechanics: Monte Carlo simulation of random fibrous assemblies,

Multiscale Modelling: Geometrical modelling of textile structures, modelling of properties of fibrous assemblies

Computational Fluid Dynamics: Newtonian and Non-Newtonian Fluids and their applications in extrusion processes, Computer simulation of fluid flows through porous materials, heat and mass transfer in fibrous assemblies.

TXV701 Process Cont. and Econ. in Manmade Fibre Prod.

1 credit (1-0-0)

Pre-requisites: TXL211/TXL221/TXL222/TXL231/TXL232 and EC 75

Introduction to manmade fibres. Consumption pattern in India and World. Factors affecting their growth. Economics of manmade fibre production. Modern polyester manufacturing plant technology. Capacities, raw materials and economics. Process and parameters at polymerization. Melt spinning and draw line. Control of modulus, tenacity, crimp properties, Dye affinity during production. Typical properties of polyester staple fibre. Partially oriented yarn and fully drawn yarn. Commodity and specialty polyester fibres. Recycled polyester staple fibres. Bio-degradable polyester PLA. Applications, properties and selection of fibres as per end uses.

TXV702 Management of Textile Business

1 credit (1-0-0)

Pre-requisites: TXL211/TXL221/TXL222/TXL231/TXL232 and EC 75

The textile industry of India : Past & its evolution to the present day. The structure of the Indian textile industry. Cotton textile sector, Jute textile sector. Silk textile sector. Manmade textile sector. Wool textile sector. Statistics of Indian textile business (domestic & export) and world textile trade. Textile policy 2000. Govt. of India. World trade practices. Norms, barriers etc. Various pertinent issues prevailing impacting textile industry and trade. Corporate social responsibility. Other compliances. ISO accreditation, etc. Retailing in textiles vis-a-vis consumer trend and behaviour. The challenging future of the Indian textile industry and trade.

TXV703 Special Module in Textile Technology

1 credit (1-0-0)

Pre-requisites: TXL211/TXL221/TXL222/TXL231/TXL232 and EC 75

The course aims at introducing special topics in textile technology. The course topics and content are likely to change with each offering depending upon the current requirement and expertise available with the department including that of the visiting professionals.

TXV704 Special Module in Yarn Manufacture

1 credit (1-0-0)

Pre-requisites: TXL211/TXL221/TXL222/TXL231/TXL232 and EC 75

The course aims at introducing new or highly specialized technological aspects in yarn manufacture. The course topics and content are likely to change with each offering depending upon the current requirement and expertise available with the department including that of the visiting professionals.

TXV705 Special Module in Fabric Manufacture

1 credit (1-0-0)

Pre-requisites: TXL211/TXL221/TXL222/TXL231/TXL232 and EC 75

The course aims at introducing new or highly specialized technological aspects in fabric manufacture. The course topics and content are likely to change with each offering depending upon the current requirement and expertise available with the department including that of the visiting professionals.

TXV706 Special Module in Fibre Science

1 credit (1-0-0)

Pre-requisites: TXL211/TXL221/TXL222/TXL231/TXL232 and EC 75

The course aims at introducing new or highly specialized technological aspects in fibre science. The course topics and content are likely to change with each offering depending upon the current requirement and expertise available with the department including that of the visiting professionals.

TXV707 Special Module in Textile Chemical Processing

1 credit (1-0-0)

Pre-requisites: TXL211/TXL221/TXL222/TXL231/TXL232 and EC 75

The course aims at introducing new or highly specialized technological aspects in textile chemical processing. The course topics and content are likely to change with each offering depending upon the current requirement and expertise available with the department including that of the visiting professionals.

TXL710 High Performance and Specialty Fibres

3 credits (3-0-0)

Pre-requisites: TXL212 and EC75

Definition, classification and structural requirements of high performance and specialty fibres, Polymerization, spinning and properties of aramids, aromatic polyesters, rigid rod and ladder polymers such as PBZT, PBO, PBI, PIPD, Manufacture of carbon fibres from polyacrylonitrile, viscose and pitch precursors, Concept of gel spinning and spinning of UHMPE fibres, Elastomeric polymers and fibres, Lyocell fibre production, Conducting fibres, Thermally and chemically resistant polymers and fibres, Methods of synthesis, production and properties of: glass and ceramic fibres. Specialty fibres: profile fibres, optical fibres, bicomponent fibres and hybrid fibres, Superabsorbent polymers and fibres.

TXL719 Functional and Smart Textiles

3 credits (3-0-0)

Pre-requisites: TXL212/TXL221/ TXL231 and EC75

Definition and Classification of Functional and Smart textiles ; Introduction to Composites : Theory, Types, Properties ; High Performance fibres, thermoplastic and thermosetting Resins; Composite Manufacturing and Applications; Coated and laminated Textiles: materials, formulations, techniques and applications ; Protective Textiles- Materials, design, principles and evaluation for protection against fire, harmful radiation, chemicals and pesticides; Sportswear: design, testing and materials – fibres, yarns, fabrics for temperature control and moisture management; Medical textiles: Classification, types and products, Health and Hygiene Textiles- protection against microbes, Wound management- dressings, suture and bandages, Implants and drug delivery systems ; Smart and Intelligent Textiles : Passive and Active functionality, stimuli sensitive textiles, Electronic Textiles : wearable computers, flexible electronics.

TXL711 Polymer and Fibre Chemistry

3 credits (3-0-0)

The course will deal with chain and step growth polymerization methods, polymer's macromolecular architecture, molecular weight of polymers, copolymerization, cross-linked polymers, general structure

and characteristics of polymers, spectroscopic analysis of polymers, properties of fiber forming polymers and their applications.

TXP711 Polymer and Fibre Chemistry Laboratory

1 credit (0-0-2)

Identification of fibres by chemical and burning tests, polymerization of vinyl monomers such as styrene, acrylamide using bulk polymerization, solution polymerization, emulsion polymerization, radiation induced polymerization. Condensation polymerization and interfacial polymerization of nylon-6, Molecular weight measurement. Intrinsic viscosity and end group analysis, preparation of phenol-formaldehyde resin. Analysis of chemical structure by FTIR, UV spectroscopy.

TXL712 Polymer and Fibre Physics

3 credits (3-0-0)

Molecular architecture, configuration, conformation of ideal and real chains, Random Walk models of polymer conformations, Gaussian chain, Self-avoiding walks and excluded-volume interaction, the amorphous phase and its chemical-physical aspects, the glass transition phenomenon, the WLF-equation, crystalline state and its chemical-physical aspect, cross-linked polymers and rubber elasticity, behaviour of polymers in solutions and mixtures, viscoelasticity and rheology of polymers, mechanical properties, physical properties of fibres: moisture absorption properties, mechanical properties, optical properties, thermal properties.

TXP712 Polymer and Fibre Physics Laboratory

1 credit (0-0-2)

Laboratory Experiments on Characterization of fibres by Infrared spectroscopy, Density measurements; Thermal analysis: Thermogravimetric Analysis (TGA), Differential Scanning calorimetry (DSC) and Thermo-Mechanical Analysis (TMA); Dynamic Mechanical Analysis (DMA); Sonic modulus; X-ray diffraction studies; Birefringence measurement; Optical microscopy studies; Scanning Electron Microscopy (SEM) of fibres: Creep and Stress Relaxation study, Mechanical property testing such as tensile and flexural rigidity.

TXL713 Technology of Melt Spun Fibres

4 credits (3-1-0)

Importance of transport phenomena in fibre manufacturing; Fundamentals of momentum transfer, heat transfer, mass transfer, building differential equations using shell balance and generalized equations; Polymer rheology- shear flow, elongational flow; Melt spinning lines for filament and staple fibre; Role of spin finish; Necessary conditions for fibre formation, elasticity versus plasticity of melts; Melt instabilities; Thermodynamic limitations; Force balance and heat balance in melt spinning; Low speed melt spinning; Necking and stress induced crystallization in high speed melt spinning; Effect of process parameters on fibre spinning and structure of nylon 6, PET and PP; Drawing Process and its necessity; Neck or flow deformational drawing; Drawing machines; Effect of parameters on structure development in nylon 6, PET, PP; Types of heat setting, Effect of setting parameters on structure and properties; Concept of bulking/texturing.

TXL714 Advanced Materials Characterization Techniques

1 credit (1-0-0)

Relevance of advanced characterization techniques in material development; scattering techniques (SAXS/WAXS); advanced surface characterization techniques (X-ray photoelectron spectroscopy (XPS), Auger electron spectroscopy (AES), secondary ion mass spectroscopy (SIMS)); microscopy techniques: basics of electron-materials interaction; SEM combined with FIB techniques; TEM and cryo-TEM; chemical analysis utilizing microscopy techniques; AFM; confocal laser microscopy.

TXL715 Technology of Solution Spun Fibres

3 credits (3-0-0)

Prerequisites: TXL711/TXL713

PAN properties; Solution rheology and its dependence on parameters. Effect of parameter on entanglement density, fibre spinning and subsequent drawing; Various solvent systems; Dope preparation; Wet and dry spinning processes; Effect of process parameters such as dope

concentration, bath concentration, temperature and jet stretch ratio on coagulation rate, fibre breakage and fibre structure; Modeling of coagulation process; properties and structure of dry and wet spun fibres; Dry jet wet spinning. Solution spinning of PAN.

Bicomponent and bulk acrylic fibres. Acrylic fibre line, crimping and annealing, tow to top conversion systems; Viscose rayon process, Spinning with and without zinc sulfate; Polynosics and high performance cellulosic fibre; Non viscose processes, Lyocell spinning process, structure and properties; Gel spinning of PE, Gel spinning of PAN and PVA. Introduction to high performance fibres and their spinning systems such as rigid rod polymer, liquid crystalline polymers, polylactic acid and spandex fibre manufacturing.

TXP716 Fibre Production and Post Spinning Operation Laboratory

2 credits (0-0-4)

Experiments related to fibres production processes. Effect of moisture and temperature on MFI of PET and PP. Melt spinning of PET, PP & nylon-6 filament yarns on laboratory spinning machines. Single and two stage drawing of the as-spun yarns or industrial POY. Demonstration of high speed spinning machine. Wet and dry heat setting of PET and nylon drawn yarns. Effect of temperature and tension on heat setting. Determination of structure and mechanical properties of as spun, POY, drawn and heat set yarns using DSC, X-ray, FTIR, density, sonic modulus. Effect of shear rate, temperature on polymer solution viscosity using Brookfield Rheometer and ball-fall method. Wet spinning or dry jet wet spinning of PAN copolymers. False twist and air jet texturing processes. Determination of structure of textured yarn under microscope.

TXL719 Functional & Smart Textiles

3 credits (3-0-0)

Pre-requisites: TXL212/TXL221/ TXL231 and EC75 and EC 75
Definition and Classification of Functional and Smart textiles ; Introduction to Composites : Theory, Types, Properties ; High Performance fibers, thermoplastic and thermosetting Resins; Composite Manufacturing and Applications; Coated and laminated Textiles: materials, formulations, techniques and applications ; Protective Textiles- Materials, design, principles and evaluation for protection against fire, harmful radiation, chemicals and pesticides; Sportswear: design, testing and materials – fibers , yarns, fabrics for temperature control and moisture management; Medical textiles: Classification, types and products, Health and Hygiene Textiles-protection against microbes, Wound management- dressings, suture and bandages, Implants and drug delivery systems ; Smart and Intelligent Textiles : Passive and Active functionality, stimuli sensitive textiles, Electronic Textiles : wearable computers, flexible electronics.

TXL721 Theory of Yarn Structure

3 credits (3-0-0)

General description of yarn structure, Fibre packing arrangement in yarns, Fibre directional arrangement in yarns, Geometry of pores in yarns, Relationship among yarn count, twist, and diameter, Helical model of fibers in yarns, Yarn retraction, Limits of twisting, Radial migration of fibers in yarns, Model of ideal fibre migration, Model of equidistant migration, Tensile mechanics of yarns, Yarn tensile behavior in light of helical model, Relationship between tensile behaviors of fiber and yarn, Yarn strength as a function of gauge length, Bending mechanics of yarns, Mass unevenness of yarns, Martindale's model of mass irregularity, Model of hierarchical structure of fibre aggregates, Hairiness of staple fiber yarns, Single- and double-exponential models of yarn hairiness, Structure and mechanics of plied yarns.

TXL722 Mechanics of Spinning Processes

3 credits (3-0-0)

Pre-requisites: TXL221/TXL222 and EC75

Principles of bale management. Forces acting on fibres during opening and cleaning, analysis of fibre compactness and blending in blowroom. Carding process, cylinder load and transfer efficiency, design of high production card, fibre shedding and card wire geometry, fibre configuration in card and drawn sliver. Fibre movement in drafting

field, drafting wave, drafting force, roller slip, roller eccentricity and vibration, autolevelling. Fibre fractionation in comber, combing performance. Analysis of forces on yarn and traveler, spinning tension in ring and rotor spinning, spinning geometry, twist flow in ring and rotor spinning, end breaks. Mechanism of drafting and yarn formation in high speed spinning systems.

TXL724 Textured Yarn Technology

3 credits (3-0-0)

Pre-requisites: TXL221/TXL222 and EC75

Principles of texturing and modern classification; False twist texturing process- mechanisms and machinery, optimization of texturing parameters, barre', structure-property correlation of textured yarns; Draw-texturing- the need and fundamental approaches; Friction texturing- the need and development, mechanics of friction texturing, latest development in twisting devices, optimization of quality parameters. Noise control in texturing.

Air jet texturing- Principle, mechanisms, development of jets and machinery, process optimization and characterization, air jet texturing of spun yarns. Air interlacement- Principle and mechanism, jet development and characterization. Bulk continuous filament yarns- Need, principle, technology development. Hi-bulk yarns- Acrylic Hi-bulk yarn production, mechanism and machines involved, other such products.

Solvent and chemical texturing- Need, texturing of synthetic and natural fibres.

TXL724 Textured Yarn Technology

3 credits (3-0-0)

Pre-requisites: TXL221/TXL222 and EC75 and EC 75

This is an advance level course in Texturing, designed for master's level students who have received an undergraduate degree in Textile Technology and as higher level elective for undergraduate students. The course focuses on prevalent science and technology with an emphasis on recent developments in texturing process and technology. Analysis of mechanisms and mechanics as also development in machinery would be covered.

TXL725 Mechanics of Spinning Machines

3 credits (3-0-0)

Pre-requisites: TXL221/TXL222 and EC75

Drive systems, belt drives, belt tensions, power transmission, variable, PIV and reversing drives. Polygonal effect in chain drives. Gear types, design aspects, interference and periodic faults, thrust loads and elimination, gear selection, planetary gear trains in spinning machines. Design of cone pulleys, design of transmission shafts and drafting rollers-materials, design against torsional & lateral rigidity. Clutches and brakes (design, torque transmission capacity, applications in textile machines, bush bearings-theory of lubrication, Rolling contact bearings in textile machines. Machine balancing (static, couple, dynamic unbalance, balancing of cylinder-plane transposition, practical aspects of balancing. Cams in roving and ring spinning machines.

TXP725 Mechanics of Textile Machines Laboratory

1 credit (0-0-2)

Students will do experimental analysis of various machine elements on textile machines.

TXL731 Theory of Fabric Structure

3 credits (3-0-0)

Engineering approach to fabric formation. Fibre, yarn and fabric structure- property relationships. Crimp interchange in woven fabric. Elastica model for fabric parameters and crimp balance. Concept of fabric relaxation and set. Practical application of geometrical and elastica models, Uniaxial and biaxial tensile deformation of woven fabric. Bending deformation of woven fabric, bending behaviour of set and unset fabrics and bending in bias direction. Bending, Shear and drape properties of woven fabric. Buckling and compressional behaviour of woven fabrics. Mathematical models and their application

in the study of tensile, bending, shear, compressional and buckling deformation of woven fabrics. Structure and properties of knitted fabrics, Structure-property relationship of nonwoven fabrics, Mechanical behavior of braided structures.

TXL732 Advanced Fabric Manufacturing Systems

3 credits (3-0-0)

Fabric manufacturing systems, Yarn quality and weavability, Yarn Preparation for High speed weaving, Preparation of high performance fibres/tows for weaving, Sizing of filament yarn, Shuttle less weaving systems: Advancements in each system with respect to productivity, yarn characteristics and fabric quality, energy requirement, design flexibility, applications and limitations, Specialty weaving: 3D weaving, Multilayer weaving, Spacer weaving, Profiled weaving, Polar and Spiral fabric, Circular Weaving, Honeycomb weaving, Denim manufacturing, Multiaxial weaving, Multiphase weaving, Terry weaving, Leno Weaving, Filament Weaving, Properties and applications of fabrics produced in these systems. Weft and warp knitted structures for technical applications, Braiding; biaxial and triaxial braids, 3D braiding, Structure, properties and applications of braided fabrics, Developments in nonwoven technologies, Stitch bonding methods, Nonwoven composite fabrics, Electrospinning, 3D nonwovens.

TXL734 Nonwoven Process and Products

3 credits (3-0-0)

Pre-requisites: TXL211/TXL221/TXL222/TXL231/TXL232 and EC75

Definitions of nonwoven and their scopes and limitations. Staple fibre preparation processes. Staple fibre web formation processes: carding, air-laying, and wet-laying. Staple fibre web stacking processes: parallel-laying, cross-laying, and perpendicular-laying, Mechanical bonding processes: needle-punching and hydroentanglement. Thermal bonding processes: calendar, through-air, impingement, infra-red, and ultrasonic bonding. Chemical bonding process. Spunmelt processes: spunbonding and meltblowing. Medical nonwovens. Hygiene nonwovens. Nonwoven wipes. Nonwoven filters. Geononwovens. Automotive nonwovens. Case studies.

TXL740 Science & App. of Nanotechnology in Textiles

3 credits (3-0-0)

Pre-requisites: EC75

Introduction to Nanoscience and Nanotechnology; Size and surface dependence of their physical and chemical properties such as mechanical, thermodynamical, electronic, catalysis etc; Synthesis of Nanomaterials used in Textiles such as carbon nanotube, fullerenes, metal and metal oxide nanoparticles i.e. nano silver, nano silica, nano titania, nano zinc oxide, nano magnesium oxide etc.; Surface functionalization and Dispersion of nanomaterials; Nanotoxicity, Characterization techniques i.e. XRD, AFM, SEM/TEM, DLS etc.; Nanomaterial applications in textiles and polymers; Nanocomposites: definition types, synthesis routes; nanocomposite fibres and coatings e.g. gas barrier, antimicrobial, conducting etc.; Nanofibres: preparation, properties and applications i.e. filtration, tissue engineering etc.; Nanofinishing: self-cleaning, antimicrobial, UV protective etc.; Nanocoating on textile substrates: Plasma Polymerisation, Layer-by-layer Self Assembly, Sol-Gel coating etc.

TXL741 Env. Manag. in Textile and Allied Industries

3 credits (3-0-0)

Pre-requisites: TXL212/TXL241/TXL242 and EC 75

Importance of ecological balance and environmental protection. Definition of waste and pollutant. Pollutant Categories and types. International and Indian legislation and enforcing agencies in pollution control. Waste management approaches; Environmental Management Systems' ISO 14000. Environmental impact along the textile chain from fibre production to disposal. Toxicity of intermediates, dyes and other auxiliaries etc. Pollution load from different wet processing operations. Textile effluents and their characterization. Technology and principles of effluent treatment. Advanced colour removal technologies, Recovery and reuse of water and chemicals. Air and noise pollution and its

control. Eco labeling schemes. Industrial hygiene and safe working practices. Analytical testing of eco and environmental parameters. Eco friendly textile processing: waste minimization. Standardization and optimization, process modification. Safe & ecofriendly dyes and auxiliaries. Organic cotton, natural dyes, naturally coloured cotton, Solid (fibre & polymer waste) recycling recovery of monomers, energy recovery and chemical modification of fibre waste.

TXL742 Theory and Practice of Textile Finishing

3 credits (2-0-2)

Classification of finishes- mechanical/chemical/functional/aesthetic. Developments in mechanical finishes - calendaring, raising, emerging. Low wet pick up technologies. Principles and chemistry of chemical finishes- easy care, antimicrobial, anti UV, antistat, softening, Flame retardant, water repellent. Specialised finishes for aroma, wellness, freshness and insect repellence. New technologies for finishing - microencapsulation, plasma, inkjet printing, ultrasonic spray. Nanotechnology for special finishing effects. Finishing of technical textiles. Membranes and laminates for multipurpose performance.

TXL743 Principles of Colour Measurement and Communication

3 credits (2-0-2)

Light and light interactions. Physical, physiological and psychophysical aspects of colour, colour perception, colour specification, colour measurement. Basis of modern techniques for colour specification, measurement and communication, Applications of colour science to textiles, colour reproduction, computer-based imaging and display systems, Basic concepts of computer colour graphics.

TXL744 Coloration of Textiles

3 credits (3-0-0)

Developments in dyes and dyeing processes for the dyeing of various textile substrates with various dye classes; Dyeing of blends; Mass coloration of man-made fibres; Advances in dyeing machinery, Development in printing methods and machines; Direct, resist and discharge styles of printing; Printing of blends; Transfer printing; Physicochemical theories of the application of dyestuffs to textile and related materials, including the thermodynamics and kinetic principles involved; Dye-polymer interactions; Role of fibre structure in dyeing.

TXL745 Green Processing Techniques and Certification

3 credits (2-1-0)

The course would highlight the processing technologies for organic fibers and eco-friendly lignocellulosic natural fibers. The further focus would be on new dyeing and finishing technologies which require fewer chemicals and consume less energy and water while also releasing cleaner effluent. Process technologies highlighted would include new enzymes and ozone technologies that replace harsh chemicals in fabric finishing, very low-moisture foam dyeing technologies, waste and solvent-eliminating digital printing technologies, low-salt reactive dyes, bleaching processes that reduce water and energy use, and technologies that combine dyeing and finishing in one step, among other technologies. Cleaner Effluent technologies would be discussed. Biocomposites and their manufacturing techniques would be detailed out. Effective recycling techniques would be discussed at length and the laws related to environmental protection would be explained specially with reference to textile industry

TXL746 Bio-processing of Textiles

3 credits (3-0-0)

Basics of Biotechnology. Bio-modified Plant Fibres and Fibres from Biopolymers. Bio dyes. Bio surfactants. Enzymes in Chemical Processing – cotton, wool, silk, jute and other bast fibres, polyester. Bio effluent treatment. Enzyme based detergents. Bio-tagging.

TXL750 Science of Clothing Comfort

3 credits (3-0-0)

Pre-requisites: TXL211/TXL221/TXL222/TXL231/TXL232 and EC75

Clothing Comfort: Brief introduction to the various processes related

to comfort, Application of science of clothing comfort. Psychology and comfort: basic concepts, Psychological research techniques, General aspects and measurement of aesthetic properties, changes in aesthetic behaviour. Neurophysiological Processes of Comfort: Neurophysiologic basis of sensory perceptions, Perceptions of sensations related to mechanical, thermal and moisture stimuli. Thermal transmission: Thermoregulatory mechanisms of human body, heat transfer theories, thermal conductivity of fibrous materials, steady state measurement techniques for heat transfer, transient heat transfer mechanism: warm-cool feeling. Moisture Transmission: transfer of liquid moisture and vapour transfer through fibrous materials. Dynamic Transmission of heat and moisture: Relationship of moisture and heat, multiphase flow through porous media, moisture exchange between fibre and air, temperature and moisture sensations: theories and objective measurement techniques, impact of microclimate. Tactile Aspects of Comfort: Fabric mechanical properties and tactile- pressure sensations like fabric prickliness, itchiness, stiffness, softness, smoothness, roughness and scratchiness, fabric hand value, clothing comfort aspects in relations with garment size and fit.

TXL751 Apparel Engineering and Quality Control

3 credits (2-0-2)

Pre-requisites: TXL211/TXL221/TXL222/TXL231/TXL232 and EC75

Introduction to clothing manufacture, Apparel Engineering Concept in Garment Industry, Need of Apparel engineering, Role and Methodology of Apparel Engineering, Industrial engineering concept in apparel engineering, Standardization and Production scheduling, Sewing Dynamics, Mechanics of sewing operation, Measurement and controls in sewing operation, Automation in sewing process, Modeling of sewing machine and operation, Fabric quality assessment for clothing industry, Evaluation and Application of low stress mechanical properties for making up process, Fabric mechanical properties and sewing operation interaction, Concept of Tailorability, Formability and Lindberg theory, Quality control in apparel manufacturing, Determination of sewability, Effect of sewing on fabric mechanical and aesthetic properties, Fabric defects and their impact on garment quality, Quality inspection and defects in apparels, Evaluation of sewing threads, Evaluation of clothing accessories, Material Functionality in clothing, Engineering of functional clothing.

TXL752 Design of Functional Clothing

3 credits (3-0-0)

Pre-requisites: TXL211/TXL221/TXL222/TXL231/TXL232 and EC75

Functional clothing - definition and classification. Techniques in design of functional clothing - 3D body scanning, human motion analysis, 2D/3D CAD and 3D modelling. Design of patterns, garment assembling methods. Ergonomics in design of functional clothing. Principles and practice of Anthropometrics. Biomechanical considerations in design of clothing. Performance evaluation of performance clothing - subjective and objective methods, modeling and simulation. Human mechanics and operational performance. Modelling, optimization and decision making techniques in design of functional clothing. Certification and standardization. Case studies - swimwear, sportswear, pressure garments, space suit, military clothing with a view to study specific design and manufacturing considerations.

TXP761 Evaluation of Textile Materials

2 credits (0-0-4)

Evaluation of clothing comfort, flammability, bursting strength, bandage pressure, UPF, impact resistance, pore size and filtration efficiency.

TXL766 Design and Manuf. of Textile Structural Composites

3 credits (3-0-0)

Pre-requisites: TXL211/TXL221/TXL222/TXL231/TXL232 and EC75

Definition of composites, textile composites and textile structural composites, Textile materials for composites, Matrix and Reinforcements, Classification of Textile Reinforced Structures based on axis and dimension; non-axial, mono-axial, biaxial, triaxial and multi-axial structures, UD, 2D, 3D structures, Structural anisotropy, parallel arrangement and series arrangement of components, Chopped strand and Milled fibres, Hybrid fabrics, Non-crimp fabrics, Laminates, Stitched structure, Embroidery structures, Composite Rope, Design, manufacture and applications of reinforcements, Manufacture and characterization of extra-light 3D hollow textile structures for composites, Methods of composite processing, Manufacturing techniques of complex structural Composites, Characterization of structural Composites, Theory of composites, Composite concepts and theory, Rule of mixture, the synergy effect, Logarithmic mixing rule, Geometry of reinforcement, Particular, granular, fibrillar, lamellar, Properties of components, properties of interface, mechanism of adhesion, Mechanics of composite, Failure theory, Damage analysis, Modeling and simulation of various reinforcement structures and their composites, Applications of Textile structural composites, Textile Reinforced Concretes, Fibre concrete bonding, textile structure reinforcement concrete architecture, Characterization and applications of reinforced concretes.

TXL771 Electronics and Controls for Textile Industry

4 credits (3-0-2)

Overview of electronics and controls in modern textiles equipments and machines. Overview of basic analog electronics: Elements (R, L, C, V, I), circuit laws and theorems. Overview of basic digital electronics: Gates and ICs. Sensors and transducers (displacement, position, force, temperature, pressure, flow). Control elements, systems and examples. Data acquisition, analysis, control and automation by microprocessors and micro controllers. Motor and power drives. Power control devices. Some applications of data acquisitions and control systems in textiles and case studies.

TXL772 Computational Methods for Textiles

3 credits (2-0-2)

Numerical analysis, First-degree approximation methods, Linear algebraic equations, ordinary differential equations, interpolation, Fundamentals of Computer Programming, Programming Methodology: Structured Programming and concepts of Object-Oriented Programming. Programming in C++ - Statements and Expressions, Control statements. Structure, Functions: Function Overloading etc. C++ as Object-Oriented Programming Language- Classes and Objects, Data Abstraction, Inheritance - Multilevel and Multiple inheritance etc., Polymorphism - operator overloading and virtual functions, file handling. Application development using C++.

TXL773 Medical Textiles

3 credits (3-0-0)

Pre-requisites: TXL211/TXL221/TXL222/TXL231/TXL232 and EC75

Natural and synthetic polymers and Textile-based techniques used for medical application, Fibrous extracellular matrix of human body and their characteristic features, Cell-Polymer interaction, Non-implantable materials (Wound-dressing, related hydrogel and composite products, Bandages, Gauzes), Implantable biomedical devices (Vascular grafts, Sutures, Heart valves), Extra-corporeal materials (Scaffolds for Tissue engineering, Rapid prototyping, Cartilage, Liver, Blood Vessel, Kidney, Urinary bladder, Tendons, Ligaments, Cornea), Healthcare and hygiene products (Surgical Gowns, masks, wipes, Antibacterial Textiles, Super absorbent polymers, Dialysis, Soluble factor release), Safety, Legal and ethical issues involved in the medical textile materials.

TXL774 Process Control in Yarn & Fabric Manufacturing

3 credits (3-0-0)

Pre-requisites: TXL211/TXL221/TXL222/TXL231/TXL232 and EC75

Basics of automatic control, Statistical considerations in process control. Online and offline control measures in spinning. Control of yarn quality attributes. Spinning process performance. Post spinning

problems. Control of winding, warping, sizing, weaving and knitting processes. Control of fabric defects and value loss. Yarn quality requirement and assessment for weaving.

TXL775 Technical Textiles

3 credits (3-0-0)

Pre-requisites: TXL211/TXL221/TXL222/TXL231/TXL232 and EC75

Definition, classification, products, market overview and growth projections of technical textiles. Fibres, yarns and fabric structures in technical textiles and their relevant properties. Type and important characteristics of sewing threads. cords, ropes, braids and narrow fabrics. Textile and other filter media for dry and wet filtration. Fibre and fabric selection for filtration. Types and application of geosynthetics. Fibres and fabric selection criteria for geotextile applications. Application of textiles in automobiles. Requirement and design for pneumatic tyres, airbags and belts. Clothing requirements for thermal protection, ballistic protection. Materials used in bullet proof and cut resistant clothing. Material, method of production and areas of application of agrotiles. Different types of fabrics used for packaging. Methods of production and properties of textiles used in these applications.

TXL777 Product Design and Development

3 credits (3-0-0)

Pre-requisites: TXL211/TXL221/TXL222/TXL231/TXL232 and EC75

Introduction to product development, distinguishing features of textile products, and its classification. Generic product development process, identifying customer need and its analysis, development of specification, need to metric conversion. Concept generation methodology, concept selection. Material selection, performance characteristics of apparel, home textile and technical products, criterion for material selection. Role of fibre, yarn and fabric and finishing process on product performance. Industrial design, ergonomics and aesthetics, Product architecture, Anthropometric principles, fit. Principles of prototyping, 3 D computer modeling, free-form fabrication. Design options for improving properties and functional attributes of different products. Design logic for developing selected products, Analysis of products; Calculation of design parameters for a given end use, developing detail specification for each structural element.

TXL781 Project Appraisal and Finance

3 credits (3-0-0)

Pre-requisites: TXL211/TXL221/TXL222/TXL231/TXL232 and EC75

Introduction to Project Finance - Description of Project Finance Transaction, difference between corporate finance and project finance, Indian Financial system, Structuring the Project, Limited Resource Structures, Capital Investments : Importance & Difficulties, CPV analysis, Financial statements, Financial statement analysis, Working capital management, Inventory management, Project cycle, Project Formulation, Project Appraisal, Financial appraisal, Economic Appraisal, Social Cost Benefit Analysis- Shadow Prices and Economic rate of return, Financing Projects, Sources of funding, Valuing Projects, NPV, IRR, MIRR, Real Options, Decision Trees and Monte Carlo Simulations, Financial Estimates & projections, Technical Analysis, Market & Demand Analysis, Investment Criteria, Cost of capital, Project Risk analysis, Sensitivity Analysis, Leverage analysis, Environment Appraisal of the project and Detailed Project Report, Case studies on Textile projects.

TXL782 Prod. & Operations Management in Textile Industry

3 credits (3-0-0)

Pre-requisites: TXL211/TXL221/TXL222/TXL231/TXL232 and EC75

Indian textile industry scenario. Textile Policy. Production and operations management function. Operation strategy. Facility location and capacity planning. Production planning and control, aggregate planning, scheduling, PERT and CPM, product mix linear programming

concepts. Inventory models, optimal order quantity, economic manufacturing batch size, classification of materials, materials requirement planning, Just in time concept. Supply chain Management. Maintenance management. Plant modernisation. Motion and time study. Job evaluation and incentive scheme. Productivity, partial and total productivity, machine, labour and energy productivity, efficiency and effectiveness, benchmarking, measure to increase productivity. Forecasting, methods of forecasting. Total quality management and Six Sigma. Product pricing. Financial and profit analysis, investment decisions. Management information system.

TXL783 Design of Experiments and Statistical Techniques

3 credits (3-0-0)

Pre-requisites: TXL211/TXL221/TXL222/TXL231/TXL232 and EC75

Objectives, principles, terminologies, guidelines, and applications of design of experiments. Completely randomized design. Randomized block design. Latin square design. Two level and three level full factorial designs. Fractional factorial designs. Robust design. Mixture experiments. Central composite and Box-Behnken designs. Response surface methodology. Multi-response optimization. Analysis of variance. Statistical test of hypothesis. Analysis of multiple linear regression. Use of statistical software packages.

TXL784 Supply Chain Management in Textile Industry

3 credits (3-0-0)

Definition, objectives, stages and metrics of textile supply chain; Life cycle of textile products, demand and fashion forecasting, forecasting techniques, bull-whip effect, aggregate forecasting in apparel industry; Designing of textile supply chain network, make vs buy and location decisions of textile SCM, reverse logistics in textile SCM; Risk mitigation in global textile supply chain, coordination among fabric, apparel and accessories manufacturers, role of dominant power; Transportation and distribution strategies; Supplier selection in textile SCM, quantitative models; Lean, agile and leagile textile supply chains and their enablers, designing resilient textile supply chain; Push-pull supply chain, decoupling point in textile SCM; Green and low carbon textile supply chain; Case studies related to textile and apparel supply chains.

TXD801 Major Project Part-I (TXE)

6 credits (0-0-12)

To learn about preparation of research plan and systematically carry out research project.

TXD802 Major Project Part-I (TXF)

6 credits (0-0-12)

To learn about preparation of research plan and systematically carry out research project.

TXD803 Major Project Part-II (TXE)

12 credits (0-0-24)

To learn about preparation of research plan and systematically carry out research project.

TXD804 Major Project Part-II (TXF)

12 credits (0-0-24)

To learn about preparation of research plan and systematically carry out research project.

TXS805 Independent Study (Textile Engineering)

3 credits (0-3-0)

Student should undertake a research oriented activity including software development, machine design & development, product & process development, instrumentation and in-depth study of a subject which is outside the regular courses offered in the program. This study should be carried out under the guidance of a faculty member. The subject area chosen by the student should be sufficiently different from the area of major project being pursued by the student.

The student should submit a detailed plan of work to the program coordinator before approval of registration for the course. The student

registered for this course should give one mid-term presentation followed by a final presentation before a committee constituted by the program coordinator.

TXS806 Independent Study (TTF)

3 credits (0-3-0)

Student should undertake a research oriented activity including software development, machine design and development, product & process development, instrumentation and in-depth study of a subject which is outside the regular courses offered in the program. This study should be carried out under the guidance of a faculty member. The subject area chosen by the student should be sufficiently different from the area of major project being pursued by the student.

The student should submit a detailed plan of work to the program coordinator before approval of registration for the course. The student registered for this course should give one mid-term presentation followed by a final presentation before a committee constituted by the program coordinator.

TXL807 Seminar (Textile Engineering)

2 credits (0-2-0)

A comprehensive literature review on a research topic of current interest or futuristic, pertaining to a textile process or product or

technology. Student should perform a comprehensive literature review on a research topic of current interest or futuristic, pertaining to a textile process or product or technology. The student should give an outline of the review and get approval from the program coordinator for registration of this course. The student registered for this course should give one mid-term presentation followed by a final presentation before a committee constituted by the program coordinator.

TXD809 Mini Project (Textile Engineering)

4 credits (0-0-8)

This is an open ended course where the students are expected to design and develop a product or equipment or instrument relevant to the field of textile technology. In this process, the students are expected to demonstrate their ability to think on their own in design and development of hardware item. They are also expected to put down their thinking process in a report form with relevant literature background, methodology of design and development process and should have conducted some experiments with the developed hardware system. Finally, they need to present their work for the award of grade.

Centre for Applied Research in Electronics

CRL601 Basics of Statistical Signal Analysis

3 credits, (2-0-2)

Fundamentals of signals and systems, LTI systems, convolution, Fourier transforms, Z- transform, sampling and Nyquist criteria, set & probability theory, random variables, probability density / distribution functions, moments, characteristic and moment generating functions, transformation of a random variable, random process, stationarity, ergodicity.

Lab experiments using MATLAB will be given to understand the practical aspects of these concepts.

CRL611 Basics of RF and Microwaves

3 credits, (2-0-2)

Basic electromagnetics, plane waves and scattering, waveguide modes, Fourier series and transform, autocorrelation and power spectral density, holes and electrons in semiconductors, p-n junction.

CRL621 Fundamentals of Semiconductor Devices

3 credits, (3-0-0)

Si Crystal structure, crystal planes and directions, band formation in semiconductors, direct and indirect gap semiconductors, E-k diagram, concept of "hole" as charge particle, effective mass, carrier mobility, life time of carriers, recombination, doping of semiconductors, drift and diffusion currents in semiconductors, metal-semiconductor junctions, ohmic and non-ohmic contacts, Schottky diode, abrupt p-n junction, energy- band diagram, junction under zero-bias, forward bias and reverse bias; current calculations, break-down in p-n junction, diffused p-n junction; bipolar transistor: theory and operation; theory of MOS FET, ideal MOSFET, threshold voltage, sub-threshold conduction in MOSFET, C-V characteristics of MOS capacitor, short-channel effects.

CRL702 Architectures and Algorithms for DSP Systems

4 credits (2-0-4)

Lectures

Introduction – DSP Tasks and Applications, Real-time Signal Processing, Representation of DSP algorithms; Number Representations and Arithmetic Operations - Fixed point and floating point representations and arithmetic operations; Q notation; Digital Signal Processor Architectures – CPU, Peripherals; Specific DSP processor architecture; DSP Instruction Set and Assembly Language Programming – Instruction types; Parallel programming; Pipelining; Efficient programming; DSP Algorithms and their Efficient Implementation - a) Linear filtering; b) FFT and spectrum analysis; c) Scalar and vector quantization, source coding, linear prediction coding; d) Function generation; Software Design for Low Power Consumption.

The DSP architecture and assembly language programming will be studied in lectures and laboratory with reference to a specific DSP processor.

Laboratory

1. Basic DSP algorithms using MATLAB, 2. Familiarization with DSP kit, 3. Real-time filtering, 4. PN Sequence generation, 5. FFT, 6. Lab project.

CRL704 Sensor Array Signal Processing

3 credits (3-0-0)

Representation of space - time signals: Coordinate systems; propagating waves; wave number-frequency space; arrays and apertures; space-time random processes and their characterization; Signal modeling and optimal filters: AR, MA, ARMA models; Autocorrelation and power spectral density; linear MMSE estimator; optimum filters; Power spectrum estimation: Non-parametric and parametric methods; Arrays and spatial filters: Frequency-wavenumber response and beam patterns; ULA; Performance measures; Synthesis of linear arrays and apertures: Spectral weighting; array polynomials; pattern sampling in wavenumber space, minimum beamwidth for specified sidelobe levels, broadband arrays; Optimum beamforming: MVDR beamformers; MMSE beamformers; Eigenvector beamformers; Adaptive beamforming: Least mean squares algorithms; Recursive

least squares; Generalized sidelobe canceler; Array geometries in higher dimensions: Rectangular arrays; Circular arrays; Spherical arrays; Cylindrical arrays.

CRL706 Selected Topics in Radars and Sonars

3 credits (3-0-0)

The Radar and Sonar Equations: Basic System Parameters; Radar and Sonar Applications; Signal Design for range and Doppler resolution: Ambiguity functions, waveforms for CTFM/FMCW, MTI Radar, Pulse Doppler Radar; Detection theory for target extraction from clutter/ reverberation and noise (clutter/reverberation modeling); Synthetic Aperture Radar/Sonar; Target Tracking: active/passive, Monopulse Radar; Modern Techniques: thru-the-wall imaging, multi-static systems.

CRL707 Human & Machine Speech Communication

3 credits (3-0-0)

Overview of human and machine speech communication: Applications; Speech signal measurement and representation. Speech science topics: Speech production and phonetics: Speech production mechanism; Articulatory and acoustic phonetics; Speech production model; International Phonetic Alphabet; Phonetic transcription; Hearing and perception. Speech signal analysis: Time domain analysis; Spectrum domain analysis; Spectrogram; Cepstrum domain analysis; Pitch estimation; Voicing analysis; Linear prediction analysis. Engineering applications: Speech coding; Speech quality assessment: Subjective and objective evaluation of quality; Automatic speech recognition: HMM; Language models; Keyword spotting; Text-to-speech synthesis: Concatenative and HMM speech synthesis; Prosody modification.

The course will include audio demonstrations and require students to do practical exercises with recorded speech signals. An isolated word speech recognizer using open source resources shall be designed.

CRL708 Sonar System Engineering

3 credits (3-0-0)

Introduction to Sonar applications, Units, Sonar Equations and their limitations, Propagation of sound, Transmission loss, Ambient Noise, Spatial Correlation, Directivity Index, Array Gain, Beam-patterns, Projector Source level, Reverberation, Scattering by targets, echo formation, Radiated Noise and Self Noise, Transmission and Reception modes, Dynamic Range Compression and Normalisation, Receiver Beamforming techniques, Sidelobe nulling, Detection Performance issues, Performance prediction, Sonar System Design examples.

CRL709 Underwater Electronic Systems

3 credits, (3-0-0)

Introduction to High Resolution Underwater Imaging Applications, Sidescan Sonar principles, Sector Scan Sonar Principles: Principle of within-pulse scanning, role of grating lobe in sector coverage, Swept-frequency delay line scanning technique, Time-Delay-Integrate scanning technique, Modulation Scanning Technique: Multi-stage scanning, Spatial DFT-based imaging technique, True Phase-Shift beamforming: Near-field focusing, Hilbert-transform based implementation, Synthetic Aperture Sonar: range migration issue, PRF limits, swath coverage, real beam pattern effects, tow-body precision issues, CTFM Sonar, Dual Demodulation CTFM Sonar Phase-Difference based SAS, Radial Projection method of imaging, Monopulse technique, Navigation: Doppler Log, JANUS system, Localization: LBL (Long baseline), SBL (Short baseline), SSBL/USBL (super/ultra short baseline), requirements of tracking and positioning systems, hyperbolic and spherical-based localization using pingers and transponders, Passive Inverse Synthetic Aperture for localizing radiated tonals from moving platforms, Underwater Acoustic Communication Modems and their applications.

CRL711 CAD of RF and Microwave Circuits

4 credits (3-0-2)

Review of basic microwave theory: Transmission lines-concepts of characteristics impedance, reflection coefficient, standing and propagating waves, equivalent circuit. Smith chart, Network analysis: Z, ABCD, Y, T, S-parameters, Impedance matching technique, Implementation using simulators. Planar transmission lines. Filters-

lumped as well as distributed element realization, Implementation using simulators. Direction couplers and Power divider.

Familiarization of photolithography process, mask making using intellicad and measurement using Automatic Network Analyzer in the laboratory classes. Design, optimization, fabrication and testing of Microstrip components and determining equivalent circuits.

CRL712 RF and Microwave Active Circuits

3 credits (3-0-0)

Microwave Amplifier theory and design. Theory and design of microwave phase shifters, switches and attenuator. Analysis of microwave mixers.

CRL715 Radiating Systems for RF Communication

3 credits (3-0-0)

Revision of Maxwell's equations, radiation, Poynting vector; antenna parameters like gain, radiation pattern, VSWR wire antennas – dipole monopole; antenna arrays; aperture antennas and equivalence theorems; printed antennas, scattering.

CRL722 RF and Microwave Solid State Devices

3 credits (3-0-0)

Review of basics of semiconductor devices. Schottky diode, qualitative description, junction properties, I-V characteristics in forward and reverse biased diodes, high frequency application of Schottky diode, Schottky barrier gate FET. GaAs MESFET I-V characteristics, High Electron Mobility Transistor (HEMT), Hetro-structures, SOI technologies and MOSFETs, Fabrication technologies for GaAs MESFET, MBE, Ion Implantation. Pattern transfer at sub-micron level.

CRL724 RF and Microwave Measurements

3 credits (3-0-0)

Theory of operation of network analyzer, and spectrum analyzer. VNA calibration, synthesized signal generation, noise measurement, measurement of antenna properties.

CRL725 Technology of RF and Microwave Solid State Devices

3 credits (3-0-0)

Review of semiconductor device processing technologies: process sequence development for a representative MOS technology, overview of oxidation, diffusion, mask making, pattern transfer, etching, metallization etc., process integration. Techniques of metallization: Introduction to vacuum systems. Sputtering (DC, RF and magnetron), e-beam evaporation for ohmic and Schottky. Contact formation, silicides for gate and interconnect. Fine line lithography process: optical lithography, x-ray and e-beam lithography, lift-off techniques. Wet and plasma assisted etching techniques, RIE, RIBE. Introduction to Ion Implantation, Molecular Beam Epitaxy. Chemical Vapour Deposition (epitaxial growth, polycrystalline, silicon, dielectric films, flow pressure and plasma chemical deposition), Atomic layer deposition. GaAs MESFET technology.

CRL726 MEMS Design and Technology

3 credits (3-0-0)

Introduction, origin and driving force for MEMS; extension of IC technologies for MEMS fabrication, major technologies for MEMSL: bulk and surface micromachining, LIGA process anisotropic etching of silicon, piezoresistive -piezoelectric effect, piezoresistive silicon based pressure sensor, capacitive pressure sensor, RF switch design, fabrication and characterization, actuation in MEMS, MEMS accelerometer design, fabrication, vibration sensor, energy harvesting devices, piezoelectric materials for MEMS, MEMS based RF and microwave circuits.

CRL727 Introduction to Quantum Electron Devices

3 credits, (3-0-0)

The foundation of quantum electronics; Nanoscale resistors: quantum resistance, quantum conductance; Scattering at quantum levels: quantum contacts, quantum interference, Andreev scattering, spin-dependent scattering; Coulomb blockade, Resonant tunneling,

Quantum capacitance, Single electron and tunnel transistors: coulomb blockade memory and logic devices, single electron invertors; Electron transport through single molecule: molecular transistors, memories and switches; Spinning of electron: spin valve and transistors, Sub-band quantum devices: quantum wells, wires and dots, sub band infrared and terahertz detectors; Quantum bit: quantum computers, different types of qubit, initialization, quantum manipulation, readout, charge qubit, phase and flux qubit, spin qubit.

CRL729 Sensors and Transducers

3 credits, (3-0-0)

Introduction to sensors and transducers, basic parameters and principles and applications of various sensors and transducers in characterization of materials, devices, circuits and systems; Acoustic and Ultrasonic sensors and transducers; Magnetic and Electrical sensors and transducers; Thermal sensors and transducers; Radiation including Optical sensors and transducers; Smart Sensors for characterization of RF materials, devices, circuits and systems; Mechanical and Thermal Engineering issues for RF Modules/Instruments; Typical applications and use of transducers in systems/instruments.

CRL731 Selected Topics in RFDT-I

3 credits (3-0-0)

Advanced course on selected topics of relevance to the RFDT M.Tech Program.

CRL732 Selected Topics in RFDT-II

3 credits (3-0-0)

Advanced course on selected topics of relevance to the RFDT M.Tech Program.

CRL733 Selected Topics in RFDT-III

3 credits (3-0-0)

Advanced course on selected topics of relevance to the RFDT M.Tech Program.

CRL734 Selected Topics in RFDT-IV

3 credits (3-0-0)

Advanced course on selected topics of relevance to the RFDT M.Tech Program.

CRP718 RF and Microwave Measurement Lab

4 credits (1-0-6)

Laboratory experiments based on network analyzer, spectrum analyzer, antenna pattern measurement, thermography, data acquisition and digitization.

CRP723 Fabrication Techniques for RF and Microwave Devices

3 credits (1-0-4)

Concept of process flow in IC fabrication, representative process flow for diode/MOSFET. High temperature processes; oxidation, diffusion, and annealing. Use of masks in IC fabrication, mask design and fabrication., Photolithography processes. Chemical etching processes: dry and wet etching. Vacuum and vacuum systems. Thin films in IC processing, resistive evaporation, ebeam, RF and DC sputtering processes. Concept of test chip design and process parameter extraction. Practicals: Vacuum system, Thermal evaporation, DC/RF sputtering, Mask making techniques: Coordinatograph/Photo-plotter first Reduction Camera, Step and Repeat process, Photolithography process, Etching techniques, Oxidation/diffusion processes, Diode fabrication, Band Pass filter fabrication, Measurement equipment calibration.

CRS735 Independent Study

3 credits (0-3-0)

Advanced course on selected topics of relevance to the RFDT M.Tech Program.

CRV741 Acoustic Classification using Passive Sonar

1 credit (1-0-0)

The challenges faced by a sonar designer, involved in developing

underwater classification systems will be introduced and possible solutions will be discussed. The radiated noise characteristics from marine vessels and the unique characteristics of the acoustic signature with respect to the class of the marine platform will be presented. Recent research work has shown that classical homomorphic signal processing techniques and other channel inversion techniques can be used to significantly reduce the unwanted underwater channel distortions that otherwise affect the classifier performance drastically. The course shall provide insight into some of the methods that can improve sonar classification performance.

CRD802 Minor Project

3 credits (0-0-6)

The project work shall be specific to each student.

CRD811 Major Project I

6 credits (0-0-12)

The project work shall be specific to each student.

CRD812 Major Project II

12 credits (0-0-24)

The project work shall be specific to each student.

CRD814 Major Project III

6 credits (0-0-12)

The project work shall be specific to each student.

Centre for Atmospheric Sciences

ASL310 Fundamentals of Atmosphere and Ocean

4 credits (3-0-2)

ASL320 Climate Change: Impacts, Adaptation and Mitigation

4 credits (3-0-2)

ASD330 Mini Project

6 credits (0-0-12)

ASL410 Numerical Simulation of Atmospheric and Oceanic Phenomena

4 credits (3-0-2)

ASL730 Introduction to Weather, Climate and Air Pollution (Not allowed for : Any program other than AST and ASZ)

1 credit (1-0-0)

Overview of the discipline, history and landmarks, career options, weather vs climate, online resources; composition of the atmosphere, Greenhouse Effect, Ozone Hole, vertical structure of the atmosphere and oceans; energy in the atmosphere, mechanisms of radiative transfer; water in the atmosphere, origin and types of clouds and precipitation; atmospheric and oceanic motion, forces, major wind patterns and ocean currents, monsoons, local circulations, scales of motion; climate and climate change, IPCC; air pollution, pollutants, acid rain, plumes, effects of wind and stability, episodes; observation tools including AWS, radar, satellite; weather and climate models, NWP, chaos theory; field trip to IMD and Hindon AFB to see meteorological instruments in operation.

ASP731 Data Analysis Methods for Atmospheric and Oceanic Sciences (Not allowed for : Any program other than AST and ASZ)

2 credits (0-0-4)

Introduction to UNIX/LINUX, basic commands, file management; introduction to MATLAB, using Mathworks resources; MATLAB I/O with NetCDF, HDF and GRIB2; plotting 1, 2 and 3 dimensional weather/climate data and animations with MATLAB; Univariate & bivariate statistics, mean/median/mode, variance/standard deviation, correlation, errors, regression; probability and distributions, how to frame and test a hypothesis, principles of statistical significance, using MATLAB functions to test hypotheses and estimate statistical significance; working with spatial weather/climate data, regridding meteorological station data, interpolation, map overlays; working with time-series, interpolation, estimating trend in weather/climate variables.

ASL732 Mathematical and Computational Methods for Atmospheric and Oceanic Sciences (Not allowed for : Any program other than AST and ASZ)

3 credits (2-0-2)

Elements of FORTRAN programming; Initial and boundary value problems; second order ordinary differential equations, variation of parameters, orthogonal functions; Partial differential equations and their classification, method of separation of variables; Euler and RungeKutta methods for ODE; Spatial and temporal finite differencing schemes of various orders, comparison with exact solutions, accuracy and numerical stability, limitation of finite difference methods; Numerical solution of linear advection equation, advection-diffusion equation, and shallow water equation.

ASL733 Physics of the Atmosphere

3 credits (3-0-0)

Structure of the atmosphere; Hydrostatic equilibrium, Geopotential, Hypsometric equation and scale height, Altimetry; Adiabatic processes, Lapse rates, Static stability, dynamic stability; Atmospheric Boundary Layer Structure and evolution, turbulence etc.

Atmospheric Thermodynamics: Thermodynamic laws; Thermodynamics of water vapour and moist air: Moisture parameters, Saturated adiabatic and Pseudoadiabatic processes, Conditional and convective instability, Free and forced convection; Thermodynamic diagrams; Phase change and Clausius-Clapeyron equation; Clouds: Formation and classification, Precipitation; Atmospheric visibility: Dew, Frost and fog, smog etc.

The fundamental physics of radiation: solar and terrestrial radiation, radiation laws; absorption, emission and scattering in the atmosphere, Schwarzschild's equation; Radiation in the earth-atmosphere system: Geographical and seasonal distribution, Radiative heating and cooling of the atmosphere, Surface energy budget, The mean annual heat balance.

ASL734 Dynamics of the Atmosphere

3 credits (3-0-0)

Fundamental forces; basic laws of conservation; hydrodynamic equations in rotating frame of reference; dimensional analysis; geostrophic and hydrostatic approximations; Atmospheric stability; Isobaric coordinate system; Gradient wind approximation; thermal wind; vertical motion; barotropic and baroclinic atmospheres; Circulation and vorticity; vorticity equation; potential vorticity conservation. Boussinesq approximation; Reynolds averaging; mixing length hypothesis; Ekman layer; Acoustic, gravity, Poincare, Rossby and Kelvin waves. Atmospheric general circulation.

ASL735 Atmospheric Chemistry and Air Pollution

3 credits (3-0-0)

Atmospheric Composition and air pollutants, Geochemical cycles: Evolution of the atmosphere and geochemical cycling of elements; Atmospheric photochemistry; Chemistry of the troposphere: Basic photochemical cycle, atmospheric chemistry dealing with various pollutant species and photochemical smog; Oxidising power of the troposphere and the Hydroxyl radical, global budgets of precursor species; Stratospheric Chemistry and Ozone: Overview, Chapman mechanism, reservoir species and catalytic cycles, Ozone hole and polar stratospheric clouds, Arctic Ozone loss, Ozone depletion potential; Aqueous phase atmospheric chemistry and acid rain; Atmospheric Aerosols: sources and characteristics, radiative effects and perturbation to climate; Atmospheric air pollutants: sources, impacts and standards; Air Pollution Meteorology: sources of air pollutants, classification and air quality standards, stability conditions, wind velocity profile, turbulence, mixing depth, characteristics of stack plumes; Dispersion of pollutants in the atmosphere: A Gaussian dispersion model, dispersion parameters and effective stack height.

ASL736 Science of Climate Change

3 credits (3-0-0)

Description of the climate system (General circulation, hydrological cycle, carbon cycle). Natural greenhouse effect and the effect of trace gases and aerosols. Forcings (natural & anthropogenic), Fast and Slow Feedbacks, Equilibrium Climate Sensitivity, Transient Climate Response. Climates of the past (ice ages, proxy records, abrupt climate change, instrumental record of climate). Climate variability and time-scales; MJO, ENSO, PDO, Milankovic cycles. Modeling climate: Simple EBMs, Coupled Climate Models. Natural and Anthropogenic climate change. Future climate projections.

ASL737 Physical and Dynamical Oceanography

3 credits (3-0-0)

Properties of sea water; temperature and salinity distributions; stratification and stability of oceanic water column; equation of state of sea water; oceanic mixed layer processes; governing equations for oceanic motions; inertial and geostrophic currents; wind-driven circulation; thermohaline circulation; Barotropic and baroclinic transports; western boundary intensification; gyres and meso-scale eddies; gyre systems, major currents in world oceans; Indian ocean circulation; physics and dynamics of ocean wind waves, internal waves and tides; coastal ocean processes; upwelling and downwelling in coastal and equatorial oceans; Rossby and Kelvin waves, biological productivity of oceans; heat and salt budget of oceans; observational methods in oceans; storm surges, ENSO and IOD phenomenon.

ASL738 Numerical Modeling of the Atmosphere and Ocean (Not allowed for : Any program other than AST and ASZ)

3 credits (2-0-2)

Introduction to weather and climate models, Numerical Modeling Vs. Other Modeling Approaches, Examples of atmospheric and oceanic simulations, Model Hierarchy (Simple, Intermediate, Complex); Governing equations in Cartesian, Isobaric and sigma coordinate systems; Numerical discretization (finite difference, finite volume, spectral) and integration, stability, CFL criterion, unconditionally stable numerical scheme; model components, dynamical core, physical parameterization, tracers, coupling of components; global and regional models used in weather forecasting and climate simulations.

ASL750 Boundary Layer Meteorology

3 credits (3-0-0)

Introduction to the boundary layer, definition and qualitative description of temporal evolution and vertical structure; Fourier series and turbulence spectra, Reynold's averaging, interpreting variance/covariance as turbulent kinetic energy and fluxes, tensors and Einstein summation notation; Prognostic equations for mean variables in a turbulent flow, simplifications; Prognostic equations for turbulent fluxes and variances; TKE equation, static and dynamic instability, Reynold's number, Richardson number, Obukhov length, stability parameter relationships, closure problem in turbulent flow, first-order local closure; surface boundary conditions, surface momentum, energy and moisture budgets, fluxes at surface and entrainment zone, drag and Bowen ratio methods; surface layer Similarity Theory, Buckingham Pi method, applications to wind profiles; Stable and convective mixed layer phenomena including nocturnal jets, thermals, dust devils; boundary layer clouds, fair-weather cumulus, fog; geographically generated local circulations like slope and valley winds, sea/lake breeze, geographically modified flow, fetch, internal boundary layer.

ASL751 Dispersion of Air Pollutants (Not allowed for : Any program other than AST and ASZ)

3 credits (3-0-0)

Air Pollution, Various types, sources and effects of pollutants in the atmospheric environment; Particulate matter and atmospheric visibility; Atmospheric diffusion theories and types of dispersion models; Lapse rates and various types of stability classification, Wind-profile, Wind rose, Mixing Depth, General characteristics of the stack plumes; Dispersion of pollutants in the atmosphere and solution of advection diffusion equation with Gaussian distribution for point, line and area sources, plume rise, dispersion parameters and various methods of their evaluation; Atmospheric Removal processes and residence time; Effect of buildings and topography on dispersion; Similarity theory and profiles in the surface layer; Air Quality and Emission standards, their measurements and statistics; Introduction of air quality models for regulatory applications.

ASL752 Mesoscale Meteorology

3 credits (3-0-0)

Overview of mesoscale phenomena relevant to India including tornadoes, thunderstorms, cloud bursts, fog, extreme rain events, lightning, etc; Circulation systems related to orography, mountain drag, mountain waves, valley winds, valley air pollution; Adiabatic mesoscale perturbations in a straight atmospheric flow; Theory of linear gravity waves, orographic gravity-wave drag; Parameterization of mesoscale phenomena in general circulation models; Mesoscale models and their application in India.

ASL753 Atmospheric Aerosols

3 credits (3-0-0)

Introduction to atmospheric aerosols; Characterization of Aerosols; Physical and Optical properties of aerosols, size distribution, refractive indices of aerosols, absorption and scattering of radiation by aerosols; single scattering albedo, aerosol optical depth, aerosol phase function, hygroscopic growth; mixing state, vertical distribution in the atmosphere; Aerosol Chemical Composition; mixing state of aerosols; New particle formation; volatile chemical compounds and gas-to-

particle conversion processes; Observations and Measurements of aerosols; Climatology of Tropospheric Aerosols; Stratospheric aerosols; Dynamics of single aerosol particle and aerosol population; Transport and transformation of aerosols; Removal of aerosols; Thermodynamics of aerosols; Role in Nucleation; Role in Cloud Physics; Interaction of aerosols with radiation; Direct, indirect, and semi-direct effects of aerosols and their influence on Climate; Aerosol effects on human health and air quality; Aerosols in chemistry transport models; Aerosols in climate models; Latest trends in aerosol research and future directions.

ASL754 Cloud Physics

3 credits (3-0-0)

Cloud types; cloud formation; cloud dynamics: entrainment, detrainment and downdraft initiation in cumuli, large scale convergence, mesoscale convective system; Kohler theory; CCN and IN; homogeneous and heterogeneous nucleation; fundamental equations governing cloud processes; warm cloud microphysics: diffusional growth, droplet population, collision-coalescence, radiative cooling; ice cloud microphysics: nucleation, ice multiplication, growth of ice particles by accretion and ice particle melting; hydrometeor; impact of microphysical processes on dynamics; cloud chemistry; aerosol-cloud interaction: direct, indirect and semi-direct effects; clouds in numerical models: parameterization of cloud microphysics; cloud-climate interaction.

ASL755 Remote Sensing of the Atmosphere and Ocean

3 credits (3-0-0)

Basics of satellite remote sensing: satellite orbits, sensor characteristics, view angle, passive and active remote sensing; atmospheric radiative transfer application in retrievals of geophysical parameters; aerosol remote sensing using ground-based (passive radiometer and lidar) and satellite platforms, retrieval algorithm, vertical distribution, application of aerosol products in climate studies; cloud remote sensing, cloud detection using multi-spectral technique, issues in cloud-masking, CO₂ slice technique; trace gas retrievals; ocean colour remote sensing, SST retrieval, wind scatterometry, altimetry; microwave remote sensing: soil moisture retrieval, passive (brightness temperature) and active (radar) microwave remote sensing for precipitation, sounding, remote sensing of cryosphere; satellite meteorology for extreme weather events (e.g. cyclone, thunderstorms etc.); land-use/land-cover change; hydrological application using gravity anomaly from satellites.

ASL756 Synoptic Meteorology

3 credits (3-0-0)

Different scales of atmospheric motion; Different types of air masses and tropical weather systems; Western disturbances and monsoonal cyclonic systems, Meteorological charts and diagrams, map projections, plotting of synoptic maps; Analysis of sea level pressure patterns, pressure tendency, surface temperature and dew point, stream lines and wind patterns, temperature patterns and isotach; Analysis of the vertical structure of the atmosphere.

ASL757 Tropical Weather and Climate

3 credits (3-0-0)

Overview; Structure of the tropical atmosphere; Role of the Tropics in the Global Mass, Momentum, and Energy Balance; Tropical Circulation & Mean Precipitation Distribution; ITCZ (Inter-tropical Convergence Zone); Tropical Waves and Tropical Variability (Intra-seasonal: MJO (Madden-Julian Oscillation), CCEWs (Convectively Coupled Equatorial Waves), Inter-annual: ENSO (El Niño Southern Oscillation), QBO (Quasi-biennial oscillation), Decadal: PDO (Pacific Decadal Oscillation), AMO (Atlantic Multi-decadal Oscillation), NAO (North Atlantic Oscillation)); Monsoons (Mean and variability); Tropical Cyclones; Modeling of the Tropical Climate & Weather.

ASL758 General Circulation of the Atmosphere

3 credits (3-0-0)

General Principles of Atmospheric Motion (Simplifications of Force Balances Important to Large-scale Motions, Large-scale Structures in the Atmosphere, Simplifications for Large-scale Vertical Structure,

Scale Analysis of the Tropics), General Circulation of the Atmosphere (Historical Evolution of Global Circulation Conceptual Models, Axisymmetric Hadley Cell: Theories and Assumptions, A Road Map to the Tropics and Subtropics, Walker circulation, Comparing the Tropics and Midlatitudes, Stratospheric Circulations), Surface ocean circulation, Atmospheric response to Equatorial Heating, Monsoons (Defining the Monsoon, A Conceptual Model of Monsoon Evolution, Evolution of the South Asian Monsoon System, Other Monsoons Around the World, Australian-Maritime Continent Monsoon, West African Monsoon, Monsoons in the Americas), General Circulation Modeling (Basics of an atmospheric general circulation model, Representation of physical processes in GCMs, analysis of GCM simulations and comparison with observations, challenges for improving GCM simulations).

ASL759 Land-Atmosphere Interactions

3 credits (3-0-0)

Introduction: components of the Earth System, energy, hydrologic and biogeochemical cycles; Weather and climate processes including atmospheric boundary layer, convection, clouds and precipitation, surface energy and moisture fluxes, climate, climate variability; Canopy-air interactions: canopy processes, observations, big leaf models, canopy models; Terrestrial hydrology: watershed hydrology, river routing models; Soil: soil physics, soil moisture, soil biogeochemistry, soil models; Carbon cycle: photosynthesis, vegetation dynamics, global biogeography, carbon cycle models; Terrestrial forcings: landscape heterogeneity, landscape induced and modified flow, feedbacks, land models, coupled Earth System models; Land-use/land-cover change: Deforestation, agriculture, urbanization, forest fires, effects on weather and climate.

ASL760 Renewable Energy Meteorology

3 credits (3-0-0)

Introduction to the atmosphere: weather and climate processes; Solar radiation and surface energy balance: Solar constant, solar geometry, atmospheric radiative transfer, clouds and aerosols, surface energy budget, urban energy use, sensors and observations; Meteorological considerations for solar power: solar resource assessment, solar forecasting for different timescales, uncertainty estimation, types of solar systems; Wind in the atmospheric boundary layer: boundary layer structure and evolution, surface layer, stability, log and power laws, flow over complex terrain, low-level jets, offshore winds, sensors and observations; Meteorological considerations for wind power: wind resource assessment, wind forecasting for different timescales using statistical and numerical methods, uncertainty estimation, types of turbines, turbine wakes, wake interactions in wind farms, turbine and wake models, LES and mesoscale models of wind farms; Solar-wind coupling: resource variability, power demand, optimization.

ASL761 Earth System Modeling

3 credits (3-0-0)

Basics of Earth System Science (Earth system components, Physical phenomena in the Earth system, Globally averaged energy budget, Energy transports by atmosphere and ocean, concepts of radiative forcing, feedbacks and climate change), Physical Processes in the Earth System and governing principles (Equation of state, Continuity equation, Conservation of momentum, Temperature equation, Moisture equation and salinity equation, Moist processes, Wave processes in the atmosphere and ocean), Representation of Physical processes in Earth System Models (Treatment of sub-grid scale processes such as dry convection, moist convection, land surface, snow, ice and vegetation; Radiation, greenhouse gases, aerosols and other climate forcings), Biogeochemical and Biophysical Processes, coupling between physics packages, Dynamics in Earth System Models (Dynamical core, Grid scale processes, Numerical representation of the grid scale processes, Grids, Resolution, Accuracy, Efficiency, and Scalability), Earth system model simulations (Climate simulations and climate drift, Verification and Validation of simulations with observations, Emission Scenarios & forcings, Global-average response to greenhouse warming scenarios, Transient climate change versus equilibrium response experiments, Trends & natural variability, scale dependency of simulations, Multi-model simulations & ensemble averages, Simulation examples from Coupled Model Inter-comparison Project).

ASL762 Air-Sea Interaction

3 credits (3-0-0)

State of matter near the air-sea interface, marine boundary layer, transfer properties between atmosphere and ocean, solar and terrestrial radiation, sea surface radiation budget, surface wind waves, air-sea interaction processes using examples of ENSO, hurricane, Indian monsoon, turbulent transfer near the interface, bubbles and spray, transport of trace gases across the interface; latent, sensible, and momentum fluxes in the surface boundary layer over the sea, bulk parameterizations, large-scale forcing by sea surface buoyancy fluxes, spatio-temporal variability of ocean surface fluxes with reference to Indian ocean.

ASL763 Coastal Ocean and Estuarine Processes

3 credits (3-0-0)

Wave generating and restoring forces, shallow water waves, coastally trapped long waves, influence of sea-bed friction, Wave spectra, Refraction and shoaling of waves, Seiches, waves-current interaction, wave transformation in shallow waters, Tsunamis, Breaking waves, Phenomenon of wave reflection, refraction, and diffraction, Surf zone hydrodynamics, shoreline setup, Swash and runup heights, wave generated alongshore currents, Rip currents, Storm surges, theory of tides, Tides in rivers and coastal lagoons, General characteristics of estuaries, Classification of estuaries, stratification, estuarine circulation and mixing, Shear instability at an interface, Entrainment and sedimentation in estuaries, Dispersion processes: Advective and turbulent diffusion, River-estuary-near-shore systems, Sediment characteristics, Sediment transport mechanisms: bedform dynamics, suspended particles in wave flows and vortices, Morpho-dynamics: Beach profiles, Tide range influence on beach morphology, Lee side erosion, Beach realignment due to climate change, Interaction of an estuary with the near-shore bay.

ASS800 Independent Study

3 credits (0-3-0)

To be given by the interested faculty.

ASP820 Advanced Data Analysis for Weather and Climate (Not allowed for : Any program other than AST and ASZ)

3 credits (1-0-4)

Weather Forecast Evaluation: Jet stream analysis, standard diagnostics and skill scores, Extreme events analysis. Using correlation to explore the relationships between large-scale atmospheric conditions, and local weather. Analyzing trends in climate data, and determining if they are statistically significant (regression, Mann-Kendall test etc). Regression based approaches, simple linear & multiple. Using indexes, Compositing patterns, Isolating patterns using EOF/PC analysis; Analysis of Time Series, Autocorrelation and Spectra.

ASL821 Advanced Dynamic Meteorology

3 credits (3-0-0)

Pre-requisites : ASL734

Quasi-geostrophic motions in the atmosphere: circulation and vorticity; Ertel-Rossby invariants; Ertel's potential vorticity conservation theorem; Kelvin and Bjerknes baroclinic circulation theorem; quasi-geostrophic turbulence. Instabilities in the atmosphere: barotropic and baroclinic instability; symmetric instabilities. Quasi-geostrophic motions in equatorial region, heat-induced tropical circulations: monsoons, El Nino and Madden-Julian Oscillation. Waves in the atmosphere: Kelvin, Rossby and Poincaré waves, Lamb wave, internal gravity waves, vertically propagating waves, Rossby adjustment theory. Middle atmosphere dynamics: sudden atmospheric warming, QBO. General circulation of the atmosphere: analysis of surface pressure and associated wind circulation, upper-tropospheric (200hPa) circulation; scale analysis, formulation of the governing set of equations for a weather prediction model.

ASL822 Climate Variability

3 credits (3-0-0)

Major modes or patterns of climate variability on intraseasonal to

interannual and decadal time scales. Well-known modes including Madden-Julian Oscillation, El Niño-Southern Oscillation, Pacific Decadal Oscillation, Atlantic Multidecadal Oscillation, Indian Ocean Dipole, Monsoon, North Atlantic Oscillation, and Annular Modes (Arctic and Antarctic Oscillation) and their impacts on extreme weather and climate. The course will review climate mode/pattern dynamics, their teleconnection mechanisms and impacts on weather/climate such as droughts etc. Temporal behavior –including how these modes have changed in the past, and how anthropogenic climate change may affect future mode behavior). Discussion of predictability of climate modes/patterns on seasonal to interannual time scales. Detection and attribution of climate change.

ASL823 Geophysical Fluid Dynamics

3 credits (3-0-0)

(i) Fundamental concepts in geophysical fluid dynamics: equations of motion on a rotating planet, vorticity and circulation, conservation of potential vorticity, thermal wind, Taylor-Proudman theorem; Ertel-Rossby invariants; Ertel's potential vorticity conservation theorem; consequences of geostrophic and hydrostatic approximation. (ii) Shallow-water theory: derivation of shallow-water equations; derivation of vorticity equation; linearized form of shallow-water equations; plane waves in a layer of constant depth; dispersion diagrams of Kelvin and Poincaré waves. (iii) Rossby wave theory: mechanism of Rossby wave generation; inertial boundary currents; derivation of potential vorticity on beta-plane; quasigeostrophic scaling; Rossby waves in a zonal current; method of multiple scales for linear potential vorticity equation; reflection and radiation of Rossby waves; generation of Rossby waves by an initial disturbance; Quasigeostrophic normal modes in a closed basin; resonant interaction; energy and enstrophy conservation; upscale energy transfer. (iv) Friction effects in geophysical flows: Turbulent Reynolds stresses; Ekman layers in a homogeneous, incompressible rotating fluid; Ekman layer on a sloping surface; quasigeostrophic potential vorticity with friction and topography. (v) Instability theory: linear stability; normal modes; growth rates; baroclinic instability; Eady model and Charney model; instability in a two-layer model.

ASL824 Parameterization of Physical Processes

3 credits (3-0-0)

Pre-requisites : Any one of ASL733, ASL734

A simple model of atmosphere with Rayleigh friction and Newtonian cooling: Gill's analytical solutions for heat-induced tropical circulations (especially El Niño and monsoon circulation); horizontal diffusion in NWP models: prevention of accumulation of small scale noise, inverse cascade. Aerodynamic formulae for surface turbulent fluxes, vertical turbulent diffusion: one-dimensional PBL model. Parameterization of orographic drag. Dry and moist processes in the atmosphere: a simple model of convection, dry adiabatic adjustment, large-scale condensation, and parameterization of deep and shallow convection. Simple and complex radiative transfer in the atmosphere; absorption of radiation by ozone, carbon dioxide and water vapour; shortwave and longwave radiation computation; radiative heating in the atmosphere.

ASP825 Mesoscale Modeling (Not allowed for : Any program other than AST and ASZ)

3 credits (0-0-6)

Introduction to the Weather Research and Forecasting (WRF) model and parallel computing; Install WRF, NCL and associated libraries; Conduct test simulations for 2-d idealized cases such as flow over a hill, sea-breeze, etc., configure and conduct test simulations for a full 3-d real case, conduct numerical experiments by changing initial & boundary conditions and namelist parameters/flags; Understand WRF code structure and registry by adding new variables into different modules; Introduction to parameterizations in WRF, explore the science and the codes of a land surface scheme and a cumulus scheme, make simple modifications to the schemes, conduct numerical experiments with modified schemes.

ASL826 Ocean Modeling (Not allowed for : Any program other than AST and ASZ)

3 credits (2-0-2)

Introduction to ocean dynamics, governing equations of oceanic motions, numerical methods in ocean modelling, hydrostatic and non-hydrostatic phenomenon, barotropic and baroclinic processes, lateral and open boundary conditions, parameterization of sub-grid scale processes, large scale ocean circulation, modelling of shelf circulation, tides and storm surge modelling, regional and coastal ocean models, shallow water models, multi-level basin scale and global ocean models, ocean wave modelling, introduction to data assimilation techniques.

ASL827 Advanced Dynamic Oceanography

3 credits (3-0-0)

Pre-requisites : Either ASL734 or ASL737

Conservation laws for moving fluids, Ekman and Sverdrup theories, coastal upwelling and fronts, Western boundary intensification, barotropic currents, baroclinic transport over topography, thermohaline circulation, Mesoscale eddies and variability. Indian ocean circulation, wave theory, ocean wave spectra, wave energy equation, breaking waves, reflection and dissipation, theory of tides, tidal currents, tidal processes in embayment and estuaries, wind and buoyancy driven currents, near-shore circulation, alongshore currents, wave-current interaction, sediment transport, coastal ocean response to extreme wind forcing, storm surges, Planetary and equatorial waves, coastally trapped Kelvin waves.

ASL851 Special Topics in Climate

3 credits (3-0-0)

To be given by the interested faculty.

ASL852 Special Topics in Oceans

3 credits (3-0-0)

To be given by the interested faculty.

ASL853 Special Topics in Atmosphere

3 credits (3-0-0)

To be given by the interested faculty.

ASL854 Special Topics in Air Pollution Studies

3 credits (3-0-0)

To be given by the interested faculty.

ASP855 Special Topics in Atmosphere and Ocean (Not allowed for : Any program other than AST and ASZ)

3 credits (1-0-4)

To be given by the interested faculty.

ASL856 Special Topics in Atmospheric and Oceanic Observations (Not allowed for : Any program other than AST and ASZ)

3 credits (2-0-2)

To be given by the interested faculty.

ASV862 Special Module in Climate

1 credit (1-0-0)

To be given by the interested faculty.

ASV863 Special Module in Oceans

1 credit (1-0-0)

To be given by the interested faculty.

ASV864 Special Module in Atmosphere

1 credit (1-0-0)

To be given by the interested faculty.

ASV865 Special Module in Air Pollution Studies

1 credit (1-0-0)

To be given by the interested faculty.

ASV866 Special Module in Atmosphere and Ocean

1 credit (1-0-0)

To be given by the interested faculty.

ASP867 Special Module in Weather Forecasting (Not allowed for : Any program other than AST and ASZ)

1 credit (0-0-2)

To be given by the interested faculty.

ASP868 Special Module in Atmospheric and Oceanic Observations (Not allowed for : Any program other than AST and ASZ)

1 credit (0-0-2)

To be given by the interested faculty.

ASC869 Atmospheric and Oceanic Science Colloquium (Not allowed for : Any program other than AST and ASZ)

1 credit (0-1-0)

To be given by the interested faculty.

ASD881 Project-I

6 credits (0-0-12)

To be given by the interested faculty.

ASD882 Project-II

12 credits (0-0-24)

Pre-requisites : ASD881

Centre for Biomedical Engineering

BML700 Introduction to Basic Medical Sciences for Engineers

3 credits (3-0-0)

Anatomical and physiological study of different human systems. Cell and tissue organization and metabolism Cardiovascular System; hemodynamics, blood, conduction system in the heart. Soft and hard tissues and joints endocrine and nervous system and their role in homeostasis; Respiratory physiology; kidneys and the urinary system.

BMV700 Biomechanical Design of Medical Devices

1 credits (1-0-0)

Pre-requisites: MEL412/433/442/AML732/733/IDL721/TTL746/BML700/EEL482

Cell Mechanics, soft tissue mechanics, cardiovascular mechanics, intro to finite element modeling of cells, tissues and organs, design and fabrication of finite element modeling of cells, tissues and organs, design and fabrication of microfluidic based devices, design of cardiovascular devices (vascular closure device, implantable cardioverter-defibrillator, pacemaker, ventricular assist device), design of orthopaedic devices (for knee, hip and shoulder injuries), design of diagnostic devices (blood sugar measurement, pressure measurement, bacterial/viral detection), design of endocrinal devices.

BMV700 Biomechanical Design of Medical Devices

1 Credit (1-0-0)

Introduction. Mechanics of cells and Tissues. Basics of Finite Element Modelling of tissues and organs. Design and Fabrication of Microfluidic devices. Design of diagnostic devices. Design of Endocrinal devices. Design of orthopaedic devices. Design of cardiovascular devices. Student presentations on innovative designs.

BML710 Industrial Biomaterial Technology

3 credits (3-0-0)

Good Manufacturing practice regulations, biomedical materials, quality assurance and quality control Labeling, Device failure, synthetic and biopolymers Bioerodible materials, Host reactions to biomaterials. Sterilization of Medical devices, Advances in Sterilization Technology of clean room, Polymeric materials for drug delivery systems, active and passive targeting, intelligent materials.

BML720 Medical Imaging

3 Credits (3-0-0)

Overview of medical imaging modalities. Radiation physics. X-ray background, physics, principles, instrumentation, developments, applications. CT background, physics, principles, instrumentation, developments, applications. MRI background, physics, principles, instrumentation, developments, applications. Ultrasound background, physics, principles, instrumentation, developments, applications. Nuclear (SPECT, PET, Gamma) background, physics, principles, instrumentation, developments, applications. Optical Imaging background, physics, principles, instrumentation, developments, applications. Contrast enhanced imaging modalities - physics, latest developments, applications. Emerging imaging modalities (microwave, electrical impedance, etc.) - physics, latest developments, applications. Project Presentations

BML 735 Biomedical Signal and Image Processing

3 Credits (2-0-2)

Introduction to Biomedical Signal and Image data obtained using various techniques (ECG, FTIR, NMR spectroscopy, MRI, CT, nuclear imaging, ultrasound and optical imaging). Noise and error propagation in Biomedical Signal and Image data. Basic statistics for biomedical signal and image data analysis. Biomedical signal processing in time domain. Fourier and Laplace transform. Biomedical signal processing in frequency domain. Biomedical image processing, including segmentation, registration and pattern recognition. Mathematical models used in biomedical signal and image data analysis. Presentations.

BML736 Mathematics for Biomedical Engineers

1 Credit (1-0-0)

Significance of Mathematics in Biomedical Engineering. Mathematical functions commonly used in Biomedical problems and data analysis. Basic calculus in relations to Biomedical problems/data. Linear Algebra in relation to Biomedical problems/data. Linear and Non linear equations in relation to Biomedical problems. Fourier transform in relation to Biomedical problems. Laplacian transform in relation to Biomedical problems. Mathematical modeling and simulations.

BML736 Mathematics for Biomedical Engineers

1 credits (1-0-0)

Significance of Mathematics and Biomedical Engineering problems, Mathematical functions commonly used in Biomedical, Calculus in relation to biomedical problems, Linear algebra in relation to biomedical problems, Linear and non-linear equations, Fourier transform, Laplace transform, Mathematical modelling and simulations.

BML750: Point of Care Medical Diagnostic Devices

3 credits (3-0-0)

Brief introductions to analytical chemistry and biochemistry; sensors and biosensors (immobilization, transducers, electronic components, op-amps and general circuits; data processing and presentation - LabVIEW based virtual instrumentation, etc.); Medical diagnostic techniques (biochemical, pathological, hematological analysis, DNA/RNA based analysis, etc.; Necessity for rapid and in-situ medical analysis; Point of care technology (POCT); Minaturization of medical diagnostic devices – Microfabrication (materials, processes, techniques for detection); Microfluidics (concept, procedure, applications and challenges); Integrated microfluidic devices: Lab-on-a-chip, system-on-a-chip, micro-total analysis system (μ TAS); Present research scenario and future prospects; Case studies on POCT devices; Laboratory visit and demonstration of microfabrication processes and Lab-on-a-chip devices

BML770 Fundamentals of Biomechanics

3 Credits (3-0-0)

Overview and significance or biomechanics to lead a better life, challenges and opportunities, inventions/research. Orthopaedic components - bones, tendons, ligaments and cartilages -primary functions, material constituents (osteoclasts, osetoblasts, collagen, collagen fibrils), mechanical strength, building vs recuperation rate, force analysis. Cardiovascular components-arteries, veins, primary functions & flowrate, material constituents, mechanical strength, inflammation, life span vs. recuperation rate, force analysis. Biomaterials - Metals/alloys, polymers, ceramics, shape-memory alloys, composites and functionally graded materials. Basic Principles - Force-Motion, Force-Time, Inertia, Range of Motion, Segmental Interaction, Balance, Cordination continuum, Projection & Spin. Force analysis of Joints at various kinetic states - Spine (running, climbing, stairs, running downhill etc), Knee (squatting, jumping, climbing stairs, kicking/soccer), shoulder (abduction, adduction, bowling, smashing - racquet sports), Elbow (tennis, golf) and Hip (during fall, running). Demonstrations - Characterization, fractures & ruptures, non-invasive analysis (MRI, CT scan).

BML790 Modern Medicine: An Engineering Perspective

1 Credit (1-0-0)

Human anatomy and physiology. Cerebral ischemia & stroke. Diabetes. Heart and Cardiovascular Disease, Congenital heart abnormalities. Skeletal system, Orthopedics, mechanical devices, Robotics in orthopaedics. Abdomen (Liver and Kidney). Cancer. From qualitative to quantitative imaging. Future trends: Telecommunication and mobile health. Site visit (AIIMS Anatomy and Imaging units). Presentation by students.

BML800 Research Techniques in Biomedical Engineering

3 credits (3-0-0)

Simulation and analysis of physiological systems by up to date computer techniques and development of physical models; Biomechanical analysis and network representation; State of art bioinstrumentation techniques; monitoring physiological parameters electrical, mechanical and chemical parameters of human body, Microminiaturization of electronics including MEMS; BIOMEMS technology; Biomedical

signal processing and imaging modalities; Research planning and interpretation of biomedical data; Telemedicine; Robotics in Medicine.

BML810 Tissue Engineering

3 credits (2-0-2)

The course will cover importance and scope of tissue engineering, Introduction to biomaterials and scaffolds, Criteria of modifying biomaterials as tissue engineering scaffolds, Properties and types of scaffolds, Different methods employed in the synthesis of scaffolds, animal cell biology, stem cells, organization of cells into tissues, tissue microenvironment, tissue injury and wound healing. Basic immunology, response of body to foreign materials. Animal cell culture on scaffolds, consequences, optimization strategies and important considerations for Skin, Liver, Bone, Cartilage, Nerve and Vascular tissue engineering.

BML820 Biomaterials

3 credits (3-0-0)

Introduction to the use of implants. Structure and properties of materials used as implants : polymers, ceramics, metal and composites; biological response to implants, wound healing process, cellular response to foreign materials, criteria for selecting implants both for soft tissue and hard tissue, polymers used as vascular prosthesis, contact lens and reconstructive surgery materials.

BML830 Biosensor Technology

4 credits (3-0-2)

Measurements and instrumentation principles. Fundamentals of transducers and sensors, their sensitivity, specificity, linearity and transduction system analysis. Introduction to biosensors; transduction

principles used in biosensors viz. electrical, optical, microchip sensors and Surface acoustic wave devices and transducers and related technology. Biotechnological components of the sensor based on enzymes, antigen-antibody reaction, biochemical detection of analytes, organelles, whole cell, receptors, DNA probe, pesticide detection, sensors for pollutant gases. Kinetics, stability and reusability of sensors. Selected examples and future developments.

BMV840 Emerging Biomedical Technology & Health Care

1 credit (1-0-0)

Importance of health related data collection and analysis, Epidemiological survey; brief them about various communicable & non-communicable diseases, path-physiological processes, environmental health and Life style diseases. Define the process of evolution of emerging technologies to solve the current health problems through an integrated approach of synergizing the discipline of medicine, engineering and management systems. Importance/ methodology of conducting clinical trials-human & animals.

BMV870 Vascular Bioengineering

1 credit (1-0-0)

Embryology and formation of vascular networking in fetus and adult human body, autonomic nervous system influences, peculiarities of micro and macro vasculatures, the physiological fluid dynamic principles involved, the molecular level changes occurring in normal and abnormal conditions like atherosclerosis, cancers, utero-placental system and various imaging modalities.

Centre for Energy Studies

ESL300 Self-Organizing Dynamical Systems

3 credits (3-0-0)

Pre-requisites: EC60 (for UG students)

Dynamical systems dissipative and area preserving, Patterns in Hamiltonian dynamics invariants and symmetry, KAM theorem / coherent structures, complexity and pattern formation, Belousov - Zhabutinsky reaction, Landau-Ginzburg / mean-field models, scaling fractals, Cellular automata, Wavelet transforms, Phase transitions and order parameter, Criticality the border of order and chaos, Entropy and direction of time, Negentropic systems, Self-organized criticality, lattice models, Examples: Electrical circuits, Management systems, Astrophysical systems, Plasma and magnetic surface systems, Biological systems, Non-linear systems.

ESL330 Energy, Ecology & Environment

4 credits (3-1-0)

Overlaps with: Same overlap with ESL710

Pre-requisites: EC60 (for UG students)

Concepts of ecosystems and environment, Characteristics and types of ecosystems, Autecology and synecology, Energy flow in ecosystems, Feedback loops, Trophic webs, Eco-technology and Eco-development, Energy-environment interaction, Impact of energy sources (coal, oil, natural gas, solar, wind, biomass, hydro, geothermal, tidal, wave, ocean thermal and nuclear) on environment, local regional and global implications, Approaches to mitigate environmental emissions from energy sector, Global initiatives Kyoto Protocol, Clean development mechanism, Case studies.

ESL340 Non-Conventional Source of Energy

4 credits (3-0-2)

Overlaps with: Same overlap with ESL740

Pre-requisites: EC60 (for UG students)

Global & National energy scenarios, Forms & characteristics of renewable energy sources, Solar radiation, Flat plate collectors, Solar concentrators, Thermal Applications of solar energy, Photovoltaics technology and applications, Energy storage, Energy from biomass, Thermochemical, Biochemical conversion to fuels, biogas and its applications, Wind characteristics, Resource assessment, Horizontal & vertical axis wind turbines, Electricity generation and water pumping, Micro/Mini hydropower systems, Water pumping and conversion to electricity, Hydraulic ram pump, Ocean Thermal Energy Conversion (OTEC), Geothermal, Tidal and Wave energies, Material aspects of Renewable energy technologies and systems

ESL350 Energy Conservation and Management

3 credits (3-0-0)

Overlaps with: ESL720

Pre-requisites: EC60 (for UG students)

Thermodynamic basis of energy conservation, Irreversible processes, Reversibility and Availability, Exergy and available energy, Energy conservation in HVAC systems and thermal power plants, Solar systems, Second law efficiency and LAW, Heat pumps and Heat pipes for space conditioning, Heat recovery and Heat exchangers, Furnaces and cooling towers, Energy conservation in buildings, U-Value of walls / roof, Ventilation systems - Fan and ducts Lighting Systems – Different light sources and luminous efficacy, Insulation use – Materials properties, Optimum thickness, Thermo economic analysis, Energy conservation in electrical devices and systems, Economic evaluation of energy conservation measures, Electric motors and transformers, Inverters and UPS, Voltages stabilizers, Energy audit and Instrumentation.

ESL360 Direct Energy Conversion Methods

4 credits (3-1-0)

Overlaps with: Same overlap with ESL730

Energy classification, Sources and utilization, Principle of energy conversion, Indirect / direct energy conversion, Basic principles of design and operations of (i) Thermoelectric (ii) Thermionic converters

(iii) Photovoltaic energy systems (iv) Fuel cells (v) Plasma diodes (vi) Magneto hydrodynamic Power generators and (vii) Advanced energy conversion systems.

ESL710 Energy, Ecology and Environment

3 credits (3-0-0)

Interrelationship between energy and environment, Sun as a source of energy, nature of its radiation, Biological processes, photosynthesis, Autecology and Synecology, Population, Community Ecosystem (wetland, terrestrial, marine) Food chains, Ecosystem theories. Sources of energy, Classification of energy sources, Environmental issues related to harnessing to fossil fuels (coal, oil, natural gas), geothermal, tidal, nuclear energy, solar, wind, hydropower, biomass, Energy flow and nutrient cycling in ecosystems, Environmental degradation, primary and secondary pollutants. Thermal/ radioactive pollution, air and water pollution, Micro climatic effects of pollution, Pollution from stationary and mobile sources, Biological effects of radiation, heat and radioactivity disposal, Acid rain, Global warming and greenhouse gases, Ozone layer depletion.

ESL711 Fuel Technology

3 credits (3-0-0)

No Laboratory Activities. Solid, liquid and gaseous fuels, Coal as a source of energy and chemicals in India, Coal preparation, Carbonization, Gasification and liquefaction of coal and lignite, Principle of combustion, Petroleum and its derived products, Testing of liquid fuels, Petroleum refining processes, Inter-conversion of fuels, Natural gases and its derivatives, sources, potential, Gas hydrates, Combustion appliances for solid, liquid and gaseous fuels, Introduction to nuclear fuel, RDF, Bio-fuels, etc.

ESL714 Power Plant Engineering

3 credits (3-0-0)

Types of thermal power stations, Steam power stations based on fossil fuels, Economy and thermal scheme of the steam power stations, Thermal power plant equipment boilers, super heaters, super critical steam generator, economizers, feed water heater, condensers, combustion chamber and gas loop, turbines, cooling towers, etc. Gas turbine power stations, Combined cycle power plants, Internal combustion engine plant for peak load, standby and start up, Elements of hydropower and wind turbine, Elements of nuclear power plants, Nuclear reactors and fuels. Recent advances in power plants (IGCC, super critical power plants, etc.). Case studies, Introduction to solar power generation, Sterling engine, Decentralized power technologies.

ESL718 Power Generation, Transmission and Distribution

3 credits (3-0-0)

Generation: Synchronous generator operation, Power angle characteristics and the infinite bus concept, dynamic analysis and modeling of synchronous machines, Excitations systems, Prime-mover governing systems, Automatic generation control.

Auxiliaries: Power system stabilizer, Artificial intelligent controls, Power quality.

AC Transmission: Overhead and cables, Transmission line equations, Regulation and transmission line losses, Reactive power compensation, Flexible AC transmission.

HVDC transmission: HVDC converters, advantages and economic considerations, converter control characteristics, analysis of HVDC link performance, Multi-terminal DC system, HVDC and FACTS;

Distribution: Distribution systems, conductor size, Kelvin's law, performance calculations and analysis, Distribution inside and commercial buildings entrance terminology, Substation and feeder circuit design considerations, distribution automation, Futuristic power generation.

ESL720 Energy Conservation

3 credits (3-0-0)

Introduction, Thermodynamics of energy conservation, Energy and

exergy concepts, Irreversibility and second law analysis and efficiency of thermal systems such as mixing, throttling, drying and solar thermal systems, Thermal power plant cycles. Refrigeration and air conditioning cycles, thermal insulation in energy conservation, energy conservation through controls, electric energy conservation in building heating and lighting, energy efficient motors, Tariffs and power factor improvement in electrical systems, Energy conservation in domestic appliances, transport, energy auditing, energy savings in boilers and furnaces, energy conservation Act, Energy conservation in small scale domestic appliances and agriculture.

ESL722 Integrated Energy Systems

3 credits (3-0-0)

Pattern of fuel consumption: agricultural, domestic, industrial and community needs, Projection of energy demands, Substitution of conventional sources by alternative sources and more efficient modern technologies, Potential, availability as well as capacity of solar, wind, biogas, natural gas, forest produce, tidal, geothermal, mini-hydro and other modern applications, Hybrid and integrated energy systems, Total energy concept and waste heat utilization, Energy modeling to optimize different systems.

ESL730 Direct Energy Conversion

3 credits (3-0-0)

Basic science of energy conversion, Indirect versus direct conversion, Physics of semiconductor junctions for photovoltaic and photo-electrochemical conversion of solar energy, Fabrication and evaluation of various solar cells in photovoltaic power generation systems, Technology and physics of thermo-electric generations, Thermal-electric materials and optimization studies, Basic concepts and design considerations of MHD generators, Cycle analysis of MHD systems, Thermionic power conversion and plasma diodes, Thermo dynamics and performance of fuel cells and their applications.

ESL732 Bioconversion and Processing of Waste

3 credits (3-0-0)

Biomass and solid wastes, Broad classification, Production of biomass, photosynthesis, Separation of components of solid wastes and processing techniques, Agro and forestry residues utilisation through conversion routes: biological, chemical and thermo chemical, Bioconversion into biogas, mechanism, Composting technique, Bioconversion of substrates into alcohols, Bioconversion into hydrogen, Thermo chemical conversion of biomass, conversion to solid, liquid and gaseous fuels, pyrolysis, gasification, combustion, Chemical conversion processes, hydrolysis and hydrogenation, Solvent extraction of hydrocarbons, Fuel combustion into electricity, case studies.

ESL734 Nuclear Energy

3 credits (3-0-0)

Introduction: Scope of nuclear energy (fission and fusion energy), typical reactions

Basics Concepts: Binding Energy of a nuclear reaction, mass energy equivalence and conservation laws, nuclear stability and radioactive decay, radioactivity calculations.

Interaction of Neutrons with Matter: Compound nucleus formation, elastic and inelastic scattering, cross sections, energy loss in scattering collisions, polyenergetic neutrons, critical energy of fission, fission cross sections, fission products, fission neutrons, energy released in fission, x-ray interaction with matter and energy deposition, fission fragments.

The Fission Reactor: The fission chain reaction, reactor fuels, conversion and breeding, the nuclear power resources, nuclear power plant & its components, power reactors and current status.

Reactor Theory: Neutron flux, Fick's law, continuity equation, diffusion equation, boundary conditions, solutions of the DE, group diffusion method, Neutron moderation (two group calculation), one group reactor equation and the slab reactor Health Hazards: radiation protection & shielding.

Nuclear Fusion: Fusion reactions, reaction cross-sections, reaction

rates, fusion power density, radiation losses, ideal fusion ignition, Ideal plasma confinement & Lawson criterion.

Plasma Concepts: Saha equation, Coulomb scattering, radiation from plasma, transport phenomena

Plasma Confinement Schemes: Magnetic and inertial confinement, current status.

ESL737 Plasma Based Materials Processing

3 credits (3-0-0)

Introduction: Plasma based processing of materials

Plasma Concepts: Plasma fluid equations, single particle motions, unmagnetized plasma dynamics, diffusion and resistivity, the DC sheath and probe diagnostics

Basics of Plasma Chemistry: Chemical reactions and equilibrium, chemical kinetics, particle and energy balance in discharges

Low Pressure Plasma Discharges: DC discharges, RF discharges - Capacitively and inductively coupled, microwave, ECR and helicon discharges

Low Pressure Materials Processing Applications: Etching for VLSI, film deposition, surface modification and other applications (plasma nitriding, plasma ion implantation, biomedical and tribological applications)

High Pressure Plasmas: High pressure non-equilibrium plasmas, thermal plasmas – the plasma arc, the plasma as a heat source, the plasma as chemical catalyst

Applications of High Pressure Plasmas: Air pollution control, plasma pyrolysis and waste removal, plasma based metallurgy – ore enrichment, applications in ceramics, plasma assisted recycling.

ESL740 Non-conventional Sources of Energy

3 credits (3-0-0)

Types of non-conventional sources, Solar energy principles and applications, efficiency of solar thermal and PV systems, Biomass: generation, characterization, Biogas: aerobic and anaerobic bio-conversion processes, microbial reactions purification, properties of biogas. Storage and enrichment, Tidal and wind energy potential and conversion efficiency, Mini/micro hydro power: classification of hydropower schemes, classification of water turbine, Turbine theory, Essential components of hydroelectric system, system efficiency, Fusion: Basic concepts, fusion reaction physics, Thermonuclear fusion reaction criteria, Confinement schemes, Inertial and magnetic confinement fusion, Current status, Geothermal: Geothermal regions, geothermal sources, dry rock and hot aquifer analysis Geothermal energy conversion technologies, OTEC.

ESL742 Economics and Financing of Renewable Energy Systems

3 credits (3-0-0)

Pre-requisites: EC 75 (for UG students in Minor Area)

Overview of renewable energy technologies. Relevance of economic and financial viability evaluation of renewable energy technologies, Basics of engineering economics, Financial feasibility evaluation of renewable energy technologies, Social cost – benefit analysis of renewable energy technologies. Technology dissemination models, Volume and learning effects on costs of renewable energy systems, Dynamics of fuel substitution by renewable energy systems and quantification of benefits. Fiscal, financial and other incentives for promotion of renewable energy systems and their effect on financial and economic viability. Financing of renewable energy systems, Carbon finance potential of renewable energy technologies and associated provisions. Software for financial evaluation of renewable energy systems. Case studies on financial and economic feasibility evaluation of renewable energy devices and systems.

ESL746 Hydrogen Energy

3 credits (3-0-0)

Introduction of Hydrogen Energy Systems

Hydrogen pathways introduction – current uses, General introduction to infrastructure requirement for hydrogen production, storage, dispensing and utilization, and Hydrogen production power plants

Hydrogen Production Processes

Thermal-Steam Reforming – Thermo chemical Water Splitting – Gasification – Pyrolysis, Nuclear thermo catalytic and partial oxidation methods. Electrochemical – Electrolysis – Photo electro chemical. Biological – Photo Biological – Anaerobic Digestion – Fermentative Micro-organisms

Hydrogen Storage

Physical and chemical properties – General storage methods, compressed storage – Composite cylinders – Glass micro sphere storage - Zeolites, Metal hydride storage, chemical hydride storage and cryogenic storage.

Hydrogen Utilization

Overview of Hydrogen utilization: I.C. Engines, gas turbines, hydrogen burners, power plant, refineries, domestic and marine applications. Hydrogen fuel quality, performance, COV, emission and combustion characteristics of Spark Ignition engines for hydrogen, back firing, knocking, volumetric efficiency, hydrogen manifold and direct injection, fumigation, NOx controlling techniques, dual fuel engine, durability studies, field trials, emissions and climate change

Hydrogen Safety

Safety barrier diagram, risk analysis, safety in handling and refueling station, safety in vehicular and stationary applications, fire detecting system, safety management, and simulation of crash tests.

ESL750 Economics and Planning of Energy Systems

3 credits (3-0-0)

Relevance of financial and economic feasibility evaluation of energy technologies and systems, Basics of engineering economics, Financial evaluation of energy technologies, Social cost benefit analysis, Case studies on techno-economics of energy conservation and renewable energy technologies.

Energy demand analysis and forecasting, Energy supply assessment and evaluation, Energy demand – supply balancing, Energy models.

Energy – economy interaction, Energy investment planning and project formulation.

Energy pricing.

Policy and planning implications of energy – environment interaction, Clean development mechanism.

Financing of energy systems.

Energy policy related acts and regulations.

Software for energy planning.

ESL755 Solar Photovoltaic Devices and Systems

3 credits (3-0-0)

Photovoltaic materials will be discussed in details. This will include materials in bulk and thin film forms. The role of microstructure (single crystal, multi crystalline, polycrystalline, amorphous and nano-crystalline) in electrical and optical properties of the materials will be emphasized. The need for different cell design will be identified and the technology route for making solar cells will be discussed. Different methods of characterization of materials and devices will be discussed. Applications of Photovoltaic for power generation from few watts to Megawatts will be introduced.

ESL760 Heat Transfer

3 credits (3-0-0)

General heat conduction equation with heat generation, Analysis of extended surfaces, transient (and periodic) heat conduction, Two dimensional heat conduction problems and solutions, Theory

of convective heat transfer, Boundary layer theory, Heat transfer in duct flows laminar and turbulent, Boiling, condensation and heat exchangers, Laws of thermal radiation, Radiation heat transfer between black and grey bodies, Numerical solutions of radiation network analysis, Thermal circuit analysis and correlations for various heat transfer coefficients, Overall heat transfer.

ESL768 Wind Energy and Hydro Power Systems

3 credits (3-0-0)

Introduction, General theories of wind machines, Basic laws and concepts of aerodynamics, Micro-siting, Description and performance of the horizontal-axis wind machines, Blade design, Description and performance of the vertical-axis wind machines, The generation of electricity by wind machines, case studies, Overview of micro mini and small hydro, Site selection and civil works, Penstocks and turbines, Speed and voltage regulation, Investment issues, load management and tariff collection, Distribution and marketing issues, case studies, Wind and hydro based stand-alone / hybrid power systems, Control of hybrid power systems, Wind diesel hybrid systems.

ESL770 Solar Energy Utilization

3 credits (3-0-0)

Solar radiation and modeling, solar collectors and types: flat plate, concentrating solar collectors, advanced collectors and solar concentrators, Selective coatings, Solar water heating, Solar cooking, Solar drying, Solar distillation and solar refrigeration, Active and passive heating and cooling of buildings, Solar thermal power generation, Solar cells, Home lighting systems, Solar lanterns, Solar PV pumps, Solar energy storage options, Industrial process heat systems, Solar thermal power generation and sterling engine, Solar economics.

ESL776 Industrial Energy and Environmental Analysis

3 credits (3-0-0)

Pre-requisites: EC 75 (for UG Students in Minor Area)

Energy and the environment, The greenhouse effect, Global energy and environmental management, Energy management and conservation, Energy in manufacture, Energy technologies, Instrumentation measurement and control, Energy management information systems, Hazardous waste management, Contamination of ground water, Treatment & disposal, Pollution from combustion and atmospheric pollution control methods.

ESL784 Cogeneration and Energy Efficiency

3 credits (3-0-0)

Pre-requisites: EC 75 (for UG Students in Minor Area)

The cogeneration concept, Main design parameters for cogeneration, Cogeneration alternatives, Bottoming and Topping cycles, Steam turbine plants, Gas turbine plants, Diesel and gas engine plants, Thermodynamic evaluation, Combined cycle applications, Sterling engine, Industry/Utility cogeneration, Trigeneration, Techno economic and environmental aspects, Cogeneration in sugar, textile, paper and steel industry, Case studies.

ESL785 Energy Analysis

3 credits (3-0-0)

Pre-requisites: EC 75 (for UG Students in Minor Area)

Energy theory of value: Principles and systems of energy flows, Methods of energy analysis, Energy intensity method, Process analysis input-output method based energy accounting, Energy cost of goods and services energy to produce fuels: Coal, Oil, Natural Gas, Energy to produce electricity, Energy cost of various modes of passenger & freight transportation, Industrial energy analysis: Aluminium, Steel, Cement, Fertilizers, Energetics of materials recycling, Energetics of renewable energy utilization (case studies), General energy equation, Energy loss, Reversibility & irreversibility, Pictorial representation of energy, Energy analysis of simple processes, Expansion, Compression, Mixing and separation, Heat transfer, Combustion, Energy analysis of thermal and chemical plants, Thermo economic applications of energy analysis and national energy balance.

ESL796 Operation and Control of Electrical Energy Systems

3 credits (3-0-0)

Real Time Monitoring of Power Systems : State Estimation, Topological observability Analysis, Security Analysis of Power Systems, Economic Dispatch & Unit Commitment

Control of Power & Frequency : Turbine -Governor Control Loops, Single Area and Multi-Area Systems Control, Effect of high penetration of Wind & Other Renewable/Distributed Generation on P-F Control

Control of Voltage & Reactive Power : Generator Excitation Systems, & Automatic Voltage Regulators, Transformer Tap Changes Controls, Voltage Control in Distribution Networks using New Power Electronic Devices

Introduction to Market operations in Electric Power Systems: Restructured Power Systems, Short Term Load Forecasting, Power Trading through Bilateral, Multilateral Contracts and Power Exchanges, Role of Distributed Generators in market Operations.

ESL7XX Economics of Energy Conservation

3 credits (3-0-0)

Pre-requisites: EC 75 (for UG Students in Minor Area)

ESL7XX Exergy Analysis

3 credits (3-0-0)

Pre-requisites: EC 75 (for UG Students in Minor Area)

Thermodynamic basis of available energy, exergy and entropy, Exergy balance equations for closed and open flow systems under steady state and unsteady state conditions, Exergetic efficiency definition for various devices, components including heat exchangers, mixing chamber and drying process, Exergy analysis of thermal energy systems including thermal power plants, refrigeration and heat pump/ air-conditioning plants, Exergy analysis of solar energy systems, solar cooker/ dryer/ collector/ concentrator/ solar still/ solar pond/ thermal storage systems and solar thermal power generation, solar photo voltaic system, Economics based on exergy analysis of thermal energy systems.

ESL7XX Waste Heat Recovery

3 credits (3-0-0)

Pre-requisites: EC 75 (for UG Students in Minor Area)

Introduction to Waste heat recovery, Classifications, Principles, Utilizations, Strategy of using waste heat recovery, Basic Heat Exchanger Design Concepts, Heat Exchanger equipment classifications, Steam generation equipment, Power plant heat recovery systems, Commercial waste heat recovery systems with detailed study of Recuperators, Radiation/Convective Hybrid Recuperator, Ceramic Regenerator, Introduction to efficient building design

ESL7XX Biomass - A Renewable Resource

3 credits (3-0-0)

Pre-requisites: EC 75 (for UG Students in Minor Area)

Biogas-animal dung and agroresidues and other cellulose wastes, ethanol from wheat or corn, sugar cane, sweetsorghum, beet roots, grapes, starchetc, pyrolysis of biomass. Direct combustion of biomass, Improved stoves routes. Second Generation Biofuels:- Biodiesel from oil seeds, Gasification of agroresidues, sawdust etc, Micro-power generation through biomass gasifiers, waste incineration fluidized bed combustion of biomass. Third Generation Biofuels:-Algae based Biodiesel, Ethanol, Hydrogen, alcohols from agroresidues, chemical composition of lignocellulosicbiomass, fuels and chemicals from each component biomass (Hemicellulose, Cellulose, and Lignin), Chemical, Thermochemical and Biochemical processes, Availability of biomass, petrocrops, aquatic biomass and its potential, concept of bioeconomy and biorefineries

ESL810 MHD Power Generation

3 credits (3-0-0)

Principle of MHD power generation, Properties of working fluids, MHD equation and types of MHD duct, Losses in MHD generators,

Diagnostics of parameters, MHD cycles, MHD components (air heater, combustion chamber, heat exchanger, diffuser, insulating materials and electrode walls, magnetic field etc.), Economics and applications of MHD, Liquid metal MHD generators.

ESL840 Solar Architecture

3 credits (3-0-0)

Thermal comfort, sun motion, Building orientation and design, passive heating and cooling concepts, thumb rules, heat transfer in buildings: Thermal modeling of passive concepts, Evaporative cooling, Energy efficient windows and day lighting, Earth air tunnel and heat exchanger, Zero energy building concept and rating systems, Energy conservation building codes, Software for Building Simulation, Automation and Energy Management of Buildings

ESL850 Solar Refrigeration and Air Conditioning

3 credits (3-0-0)

Potential and scope of solar cooling, Types of solar cooling systems, Solar collectors and storage systems for solar refrigeration and air-conditioning, Solar operation of vapour absorption and vapour compression refrigeration cycles and their thermodynamic assessment, Rankine cycle, sterling cycle based solar cooling systems, Jet ejector solar cooling systems, Fuel assisted solar cooling systems, Solar desiccant cooling systems, Open cycle absorption / desorption solar cooling alternatives, Advanced solar cooling systems, Thermal modeling and computer simulation for continuous and intermittent solar refrigeration and air-conditioning systems, Refrigerant storage for solar absorption cooling systems, Solar thermoelectric refrigeration and air-conditioning, Solar thermo acoustic cooling and hybrid air-conditioning, Solar economics of cooling systems.

ESL860 Electrical Power Systems Analysis

3 credits (3-0-0)

Network modeling and short circuit analysis: Primitive network, Y bus and Z bus matrices formulation, Power invariant transformations, Mutually coupled branches Z bus, Fault calculations using Z bus, Power flow solutions: AC load flow formulations, Gauss-siedel method, Newton Raphson method, Decoupled power flow method, Security analysis: Z bus methods in contingency analysis, Adding and removing multiple lines, Interconnected systems, Single contingency and multiple contingencies, Analysis by DC model, System reduction for contingency studies, State Estimation: Lone power flow state estimator, Method of least squares, Statistics error and estimates, Test for bad data, Monitoring the power system, Determination of variance, Improving state estimates by adding measurements, Hierarchical state estimation, Dynamic state estimation, Power system stability: transient and dynamic stability, Swing equation, Electric power relations, Concepts in transient stability, Method for stability assessment, Improving system stability.

ESL870 Fusion Energy

3 credits (3-0-0)

Fission and fusion, Need for plasma, Lawson criterion, Confinement problem, Laser driven fusion, Magnetic confinement, Plasma concept, Single particle motions in complex magnetic field geometries, Equilibrium and stability, Cross field transport, Important heating schemes, Tokamak and magnetic mirror, Reactor concepts, Current status.

ESL871 Advanced Fusion Energy

3 credits (3-0-0)

Tokamak confinement Physics, Particle motions in a tokamak, Toroidal equilibrium, Toroidal stability, High-beta Tokamak, Experimental observations, Fusion Technology, Commercial Tokamak Fusion-power plant, Tandem- mirror fusion power plant, Other Fusion reactors concepts, Inertial confinement fusion reactors, Reactor cavity, Hybrid fusion/fission systems, Process heat and synthetic fuel production.

ESL875 Alternative Fuels for Transportation

3 credits (3-0-0)

Pre-requisites: EC 100 (for UG Students in Minor Area)

An introduction to hydrocarbon fuels-their availability and effect on environment, Gasoline and diesel self-ignition characteristics of the fuel, octane number , cetane number , Alternative fuels – liquid and gaseous fuels, physico-chemical characteristics , Alternative liquid fuels, Alcohol fuels – ethanol and methanol, fuel composition , Fuel induction techniques ,Fumigation, Emission of oxygenates, Applications to engines and automotive conversions, Biodiesel formulation techniques, Trans esterification, Application in diesel engines, DME (Dimethyl ether), properties fuel injection consideration general introduction to LPG and LNG, Compresses natural gas components, mixtures and kits, Fuel supply system and emission studies and control, Hydrogen combustion characteristics, Flashback control techniques, Safety aspects and system development, NOx emission control, Biogas, Producer gas and their characteristics system development for engine application.

ESL880 Solar Thermal Power Generation

3 credits (3-0-0)

Relevance of solar thermal power generation; Design and performance characteristics of different solar concentrator types suitable for thermal power generation; Tracking of solar concentrators; performance characterization of solar concentrators ,Storage option for solar thermal power plants; Modes of power generation in solar thermal power

plants; Sizing solar thermal power plants; Operation and maintenance issues; Emerging trends in solar thermal power generation; Economics of solar thermal power generation; Case studies.

ESP713 Energy Laboratories

3 credits (0-0-6)

Pre-requisites: EC 75 (for UG Students in Minor Area)

ESP713 Energy Laboratory

3 credits (0-0-6)

JSD799 Minor Project (JES)

3 credits (3-0-0)

JSD801 Major Project Part – 1 (JES)

6 credits (0-0-12)

JSD802 Major Project Part – 2 (JES)

12 credits (0-0-24)

JSS801 Independent Study (JES)

3 credits (0-3-0)

Industrial Tribology, Machine Dynamics and Maintenance Engineering Centre

ITL702 Diagnostic Maintenance and Condition Monitoring

4 credits (3-0-2)

Maintenance strategies and introduction to Condition Based Maintenance (CBM), Application and economic benefits, Signature analysis - online and off-line techniques, Various Condition Monitoring (CM) techniques - Vibration monitoring and analysis, Shock Pulse Method, Noise monitoring, Envelope detection technique, Cepstrum analysis, Oil analysis including wear debris and contaminant monitoring, Performance monitoring, Acoustic emission and other techniques, Non-destructive testing techniques, Temperature monitoring including Thermography, Application and choice of the method, Practical applications of diagnostic maintenance, Condition monitoring of mechanical and electrical machines, Case studies.

ITL703 Fundamentals of Tribology

4 credits (3-0-2)

Introduction to tribology and its historical background. Factors influencing Tribological phenomena. Engineering surfaces – Surface characterization, Computation of surface parameters. Surface measurement techniques. Apparent and real area of contact.

Contact of engineering surfaces- Hertzian and non-hertzian contact. Contact pressure and deformation in non-conformal contacts. Genesis of friction, friction in contacting rough surfaces, sliding and rolling friction, Various laws and theory of friction. Stick-slip friction behaviour, frictional heating and temperature rise. Friction measurement techniques. Wear and wear types. Mechanisms of wear - Adhesive, abrasive, corrosive, erosion, fatigue, fretting, etc., Wear of metals and non-metals. Wear models - asperity contact, constant and variable wear rate, geometrical influence in wear models, wear damage. Wear in various mechanical components,

wear controlling techniques. Introduction to lubrication. Lubrication regimes. Introduction to micro and nano-tribology.

ITL705 Materials for Tribological Applications

3 credits (3-0-0)

Introduction to tribological processes and tribological relevant properties of materials. An overview of engineering materials having potential for tribological application.

Characterization and evaluation of Ferrous materials for tribological requirements/applications, Selection of ferrous materials for rolling element bearings, gears, crank shafts, piston rings, cylinder liners, etc. Non-ferrous materials and their applications such as sliding bearings, piston rings, cylinder liners, etc., materials for dry friction materials.

Composite materials (PM, CMC and MMC) for tribological applications.

Surface treatment techniques with applications such as carburizing, nitriding, induction hardening, hard facing, laser surface treatments, etc.

Surface coating techniques such as electrochemical depositions, anodizing, thermal spraying, Chemical Vapour Deposition (CVD), Physical Vapour Deposition (PVD), etc. and their applications.

Lubricants- Introduction, requirements, types, Evaluation and testing of lubricants.

ITL709 Maintenance Planning and Control

3 credits (3-0-0)

Objectives of planned maintenance, Maintenance philosophies, Preventive and Predictive maintenance, Emerging trends in maintenance-Proactive Maintenance, Reliability Centred Maintenance (RCM), Total Productive Maintenance (TPM), etc, Implementation of Maintenance strategy, Maintenance organization, Basis of planned maintenance system, Maintenance planning and scheduling, Maintenance control system and documentation. Spares and inventory planning, Manpower planning, maintenance auditing. Human factors in maintenance and training, maintenance costing, Maintenance performance. Repair decisions- Repair, replacement and overhaul,

Computer applications in maintenance, Expert systems applications, maintenance effectiveness, Case studies.

ITL710 Design of Tribological Elements

3 credits (3-0-0)

Introduction-Tribological consideration in design, Conceptual design, Classification of tribological components, Mechanisms of tribological failures in machines, Zero wear concept, Computational techniques in design.

Design of Dry Frictional Elements-Dry friction concepts, Brakes and Clutches, Friction belts and Dry rubbing bearing.

Design of Fluid Frictional Elements- Fluid friction concepts, Design of hydrodynamically loaded journal bearings, externally pressurized bearings, Oscillating journal bearings, Externally pressurized bearings, Design of oil groove, Design of elliptical, multi-lobe and titled pad bearings.

Rolling elements bearings, Performance analysis of bearings, gears, seals, piston rings, machine tool slide ways, cams and follower and wire rope.

ITL711 Reliability, Availability and Maintainability (RAM) Engineering

3 credits (3-0-0)

System concepts in RAM Engineering, Fundamentals of reliability, Failure distributions, Statistical analysis of failure data, Weibull analysis, Monte Carlo simulation, System reliability assessment. Reliability of repairable and non-repairable systems. Point, mission and steady state availability. Availability assessment. Maintainability and its assessment. Design for reliability and maintainability', Practical applications of RAM Engineering to systems, products and processes.

ITL714 Failure Analysis and Repair

4 credits (3-0-2)

Introduction, need for failure analysis, Classification of failures, Fundamental causes of failures, influence of type of loading (e.g. static, fatigue, shock, etc.) on nature of failures, Role of stress; processing and fabrication defects, Effect of residual stresses induced during fabrication processes, Influence of temperature and environment on failure, Crack and subsurface crack like defects and their significance in failure.

Micro mechanisms of failures; Ductile and brittle fracture, Fracture initiation and propagation, Fatigue failures, Wear related failures, High temperature failures, low temperature failures, etc., Studies and analysis of failed surfaces.

Identification of failures, Techniques of failure analysis, Microscopic methods, Fracture mechanics techniques, Prediction of failures, Residual life assessment and life extension, Typical case studies in failure analysis, Logical fault finding and its application, Inspection and safety measures, Repair techniques and economic considerations, Failure analysis for design improvement and proactive maintenance, Design for reparability, Case Studies.

ITL717 Corrosion and its Control

3 credits (3-0-0)

Importance of corrosion control in industrial practices, Thermodynamics of corrosion, Broad forms of corrosion – uniform, uneven, pitting, cracking, etc. influencing factors on corrosion. Surface film, Polarisation and effect, Theory of passivity, kinetics of corrosion, Various types of corrosion along with case studies – Galvanic, Thermogalvanic, High temperature corrosion, Intergranular, Pitting, Selective attack (leaching), fretting corrosion – erosion, cavitation, Stress corrosion cracking, hydrogen embrittlement, etc., Various techniques for corrosion evaluation and monitoring, Corrosion Control-Design improvement, Selection of material, fabrication process for corrosion control, Role of residual stress, Changes in operating conditions, Use of inhibitors, Anodic and Cathodic protection, Corrosion resistant coatings, Case studies.

ITL730 Lubricants

3 credits (2-0-2)

Overview of friction (F), wear (W) and lubrication, Primary role of lubricants in mitigation of F & W & heat transfer medium, Composition and properties of lubricant; Types of lubricants such as mineral oil based, synthetic lubricants, solid lubricants, and greases; Characteristics properties of lubes & greases; their evaluation methods, Classification systems such as API, SAE, AGMA, NLGI, ISO; Additives such as Viscosity-index improver (VII); Anti-oxidant (AO); Anti-friction (AF) Antiwear (AW) Extreme-pressure (EP); Corrosion inhibitors (CI), detergents, dispersants; Selection criteria for lubricants for various tribological situations and applications; Used lubes-environment & health hazards and disposability and recycling, evaluation of oil degradation by various techniques.

ITL740 Risk Analysis and Safety

3 credits (2-1-0)

Introduction, Typical hazards, Accident indices, Fire and explosion hazards, Dow's fire and explosion index, Hazards identification procedures for plants and machinery; Preliminary hazard analysis (PHA), Fault Hazard Analysis (FHA), Hazard and operability (HAZOP), What if, Check lists, Failure mode and effects analysis (FMEA), Failure mode, effects and criticality analysis (FMECA), HAZAN: Hazard analysis; FTA (Fault tree analysis), ETA (Event tree analysis), and CCA (Cause consequence analysis), Transportation of hazardous materials, Safety audit, Health and safety aspects of lubricants, Human factors in safety, Risk evaluation and acceptance criteria, Disaster management, Safety codes and Case studies.

ITL752 Bulk Materials Handling

3 credits (2-0-2)

Nature of bulk materials, Flow of gas-solids in pipelines, Mechanical Handling equipments like screw conveyors, belt conveyors and bucket elevators, Pneumatic conveying systems- Components, Design and Selection, Troubleshooting and Maintenance of pneumatic conveying systems, Performance evaluation of alternative systems, Bend erosion-influencing factors, materials selection and potential solutions, Case studies, and Design exercises.

ITL760 Noise Monitoring and Control

3 credits (2-0-2)

Introduction to noise, Properties of noise, Loudness and weighting networks, Noise measurement parameters and standards, Impulse

noise, Frequency analysis - octave, one third octave and FFT analysis, Instrumentation for noise measurement and analysis, Sound power, Sound intensity measurement technique with applications, Noise source location, Noise diagnostics, Noise monitoring of machines with examples, Estimation of machinery noise, Cepstrum analysis, Noise control methods, Maintenance and noise reduction, Road vehicle and aircraft noise sources and control, Case studies.

ITL810 Bearing Lubrication

3 credits (3-0-0)

Introduction-Historical background, Bearing concepts and typical applications. Viscous flow concepts-Conservation of laws and its derivations: continuity, momentum (N-S equations) and energy, Solutions of Navier-Stokes equations. Order of magnitude analysis, General Reynolds equation-2D and 3D (Cartesian and Cylindrical), Various mechanisms of pressure development in an oil film, Performance parameters.

Boundary Layer Concepts-Laminar and turbulent flow in bearings, mathematical modeling of flow in high-speed bearings. Elastic Deformation of bearing surfaces-Contact of smooth and rough solid surfaces, elasticity equation, Stress distribution and local deformation in mating surfaces due to loadings, methods to avoid singularity effects, Estimation of elastic deformation by numerical methods-Finite Difference Method (FDM), Governing equation for evaluation of film thickness in Elastohydrodynamic Lubrication (EHL) and its solution, Boundary conditions. Development of computer programs for mathematical modeling of flow in bearings, Numerical simulation of elastic deformation in bearing surfaces by FDM.

JID800 Minor Project

3 credits (0-0-6)

JIS800 Independent Study

3 credits (0-3-0)

JIT801 Major Project Part 1 (JIT)

6 credits (0-0-12)

JIT802 Major Project Part 2 (JIT)

12 credits (0-0-24)

Instrument Design and Development Centre

DSL601 Electronic Components and Circuits (for students other than Electrical/Electronics/Electronics and Communication)

3 credits (3-0-0)

Review of Electronic Components: Passive Components, Active Components including components used in Industrial Environment.

Electronic Circuits: Choppers, Clampers, analog circuits, precision and instrumentation amplifiers, signal conditioning circuits, industrial electronic circuits. Nonlinear devices and circuits, computing circuits and waveform generators.

Analog-Digital circuits: A/D and D/A converters, classification and characteristic parameters of DAC's and ADC's. Testing criteria. Multiplying DAC's.

Digital Electronics: Logic gates, Combinational logic design, Sequential logic design, Counters;

Memory Devices, SRAM, DRAM, ROM, EPROM, Flash Memories and Programmable Gate Arrays.

Microprocessors: 8 bit and 16 bit microprocessor, basic structure and programming.

Application of microprocessors in instruments. Introduction to micro-controllers and embedded systems.

DSL603 Material and Mechanical Design (for students from Electrical/Electronics/Electronics and communication)

3 credits (3-0-0)

Basics of Design: Stresses, strain, hardness, toughness, visco-elasticity, torsion, bending, deflection of beams, combined stresses, energy methods. Material: metals and their alloys, heat treatment, polymers, composites, ceramics etc. Design of machine elements: Failure theories for static and alternating loadings. Design of shafts, fasteners, springs, curved beams, thick and thin vessels, gears etc; Lubrication, journal bearings and rolling contact bearings, limits, fits and tolerances. Deflection of thin plates. Design of mechanical elements for strain gage and other instrumentation applications. Introduction to vibrations and its isolation. Mechanical Fabrication techniques used in instruments. Basic mechanical fabrication processes. Design and drawing sessions.

DSP703 Instrument Technology Laboratory 1

3 credits (0-0-6)

The laboratory essentially supports the courses taught in the first semester courses. It consists of experiments on:-

Study of packaging and characterization of transducers used for measurement of different physical variables like displacement, temperature, pressure, strain, flow etc.; Study of practical signal conditioning techniques and electronic measurement methods; Study of Electronic subsystems used in instruments Experiments on Cardinal points measurements using Nodal slide method, Measurement of wedge angle of optical flat and right angle of a prism by Autocollimation, Measurement the long radius of curvature of concave mirror using Foucault Knife edge test and Ronchi test, Newton and Fizeau Interferometer for Testing of optical surface, Quantitative testing of optical elements using polarisation based Twyman-Green interferometer, Measurement of small radius of curvature of lens using "Optical Spherometer", Moire interferometry for displacement measurement.

DSP704 Instrument Technology Laboratory 2

3 credits (0-0-6)

The laboratory supports the subjects taught in the second semester courses. The laboratory consists experiments on:

Study of various techniques used for analog and digital conditioning of signals from various transducers/ detectors; Study on modulation/demodulation techniques, noise generation and measurement, Study of testing and calibration methods of instruments.

The structure of experiments has been designed to impart design level

familiarity with various subsystems of instrumentation set up. The subsystems may consist of a detector-transducer, signal conditioner, a level power amplifier, display, actuator/final control element. The study will generally focus attention on one of the subsystems. In electronics conditioning.

Specific Case Study Experiments as below:

Experiments in Control involving speed, position, temperature controls using MATLAB

Experiments in Heat Conduction/ Convection. And Heat Sink Characterisation

Data conversion, ADC & DAC, synchronous detectors, multipliers, dividers, instrumentation amplifiers

Microprocessor/Microcontroller based system design with emphasis on real world interfacing

Experiments on precision measurement methods and metrology.

DSP705 Advanced Instrument Technology Lab

3 credits (0-0-6)

Experiments on design, simulation and verification of instrumentation sub-systems addressing the following objectives:

the performance of practical transducer systems and their processing circuits dealing with other devices and circuit noise validation of algorithms for information extraction from sensor signatures dynamic range, threshold and sensitivity characterization and response time evaluation in practical environments

Experiments based on Digital Signal Processing hardware and software to:

study of DSP architecture

interfacing with peripheral components

Implementation of DSP algorithm

Experiments based on Talbot effect, Digital Speckle Pattern Interferometry and Shack Hartmann Sensor.

DSL710 Framework of Design

2 credits (2-0-0)

definition of design as an industrial and social activity. Understanding of 'design' as a noun and as a verb. Design as a case of ill structured, ill defined, ill constrained problem solving. Comparative study of production processes in art, engineering and design. Design as cycle of analysis, synthesis, and validation of ideas. Design as the meeting point of the user needs, technology affordance and business goals. History of art and design. Influence of society and culture on design. Study of successful and failed products. Study of evolution of designed products. Consideration of advertising, marketing, consumer satisfaction, prevalent expertise, economic viability, production ecosystem, future prediction, legal and statutory concerns, IPR issues in design success.

DSL711 Sensors and Transducers

3 credits (3-0-0)

Transducer Fundamentals :

Transducer terminology Design and performance characteristics, --- criteria for transducer selection, Case Studies -- Transducers principles of representative cases with emphasis on special "Electronic Conditioning requirements" of different type of sensors-- Resistive transducer; Inductive transducers; capacitive transducers; piezoelectric transducer; semiconductor and other sensing structures. Displacement transducers; tachometers and velocity transducers; accelerometers and gyros; strain gauges; force and torque transducers; flow meters and level sensors; pressure transducers; sound and ultrasonic transducer. Phototubes and photodiodes; photovoltaic and photoconductive cells, photoemission, photo electromagnetic, detectors pressure actuated photoelectric detectors, design and operation of optical detectors, detector characteristics.

Brief Introduction -- Smart Intelligent Sensors, MEMS, Nano.

Transducer Performance : Static and dynamic performance parameters

Standards : Electrical tests, measurement unit, measurement standards of voltage, current, frequency, impedance etc .

Errors and noise : types of errors, Effect of noise and errors on resolution and threshold. Dynamic range.

Testing: Calibration, dynamic tests, environmental test, life test.

Case Studies in Application of transducers: displacement, velocity, acceleration, force, stress, strain, pressure and temperature measurement. Angular and linear encoders, Radar, laser and sonar distance measurement, Tachometers, Viscometer, densitometer.

DSP711 Computer Aided Product Detailing

3 credits (1-0-4)

DSL712 Electronic Techniques for Signal Conditioning and Interfacing

3 credits (3-0-0)

Review of Network theory, transmission lines and Circuit parameters (Z Y Hybrid, etc) and introduction to HF Design and S parameters Analog signal conditioning, Ultra- precision conditioning, Gain; attenuation; input and output impedances; single ended and differential signals; CMRR; system-module interfacing consideration; measurement and characterization of electronic system modules.

Analog and digital System Co-housing: EMI effects and EMC measures; circuit card placement; shielding and grounding techniques; ground loop management; isolation and interference filtering. EMI hardening and EMC interfacing.

Analog and digital data transmission; modulation & demodulation; Data transmission; channel noise and noise immunity factors. Data busses; GPIB and other standards in parallel data transmission. Opto-electronic interfacing techniques.

Analog and digital representation of data; comparisons and relative merits; multiplexing and demultiplexing of analog and digital data, ADC/DAC. Microcontroller and DSP applications.

Application of CPU's in signal and data handling; response linearization and drift compensation; data logger, computer aided measurement and control.

DSP712 Exhibitions and Environmental Design

3 credits (2-0-2)

course contents History of exhibition design. Human movements and exhibition plans. Concept of physical and psychological space. Design of physical environment for human comfort and function. Study of fixtures and fittings. Design and use of modular and fixed elements in display design. Lights and illumination systems. Types of lights. Study of indoor and outdoor lighting requirements. Innovative materials and processes in exhibitions. Outdoor and indoor land-scaping . Types of pavilions. Space requirement calculation in design. Design of murals, artifacts, exhibits and models. Use of background, negative space, foreground, proportion and scale in exhibition composition. Exercises and projects.

DSL714 Instrument Design and Simulations

3 credits (2-0-2)

Review of circuit analysis and design. Review of signals and systems in time and frequency domain: Fourier and Laplace Transforms, response plots.

Dynamic properties of instrument systems: Review of instrument control systems, on-off, proportional and PID controllers. Stability considerations, gain and phase margin.

Use of pulse and harmonic test signals for performance evaluation. Linear modelling of instrument systems. Models for basic instrument building blocks. Simulation studies of circuit blocks. Simulation studies of circuits, instrument modules, transducers and control schemes using PSPICE and MATLAB expert simulation software.

DSS720 Independent Study

3 credits (0-3-0)

DSP721 Design and Innovation Methods

3 credits (1-0-4)

1. Understanding of factors that directly or indirectly influence the product definition and its context. Assessing relevance of available products in the futuristic context. 2. Research planning strategies, finding real challenges, Methods of Exploring design situations, developing questionnaires for interviewing users. 3. Searching for visual inconsistencies, 4. Creativity methods, Brainstorming, Syntectics, 5.Issue Tree, Mind Mapping, 6.Story Boarding, Image boarding 7.Six-Thinking Hats, Harvey Cards, Lotus Blossom, COCD, 8.Lateral Thinking, Wishful Thinking. 9. Specification writing, 10.Methods of exploring problem structure, Product-environment and Product-component interaction, 11.Alexanders method of determining components, 12.Interaction Matrix and net, 13.Analysis of interconnected decision areas, System innovation, 14.Functional Innovation by boundary shifting, through boundary searching and experimentation.

DSL722 Precision Measurement Systems

3 credits (3-0-0)

Fundamentals of precision measurements: accuracy, precision, resolution, repeatability, reproducibility, consistency, drift analysis, dynamic range, Measurements and error estimation, systematic and random errors, Instrument transfer function, least square method and its applications, filtering, polynomial fitting, data analysis and statistical inference, correlation, Surface roughness, waviness and shape measurements, Study of some measurement systems such as mechanical and optical profilers, circularity, cylindricity and conicity measurement systems, Co-ordinate measuring machine, profile projector, long trace slope measuring profilometer, Shack-Hartmann sensor for slope measurement, Different Interferometers for optical metrology, absolute testing techniques, Moire techniques for measurements in industrial applications.

DSP722 Applied Ergonomics

2 credits (1-0-2)

definition, origin, scope and goals of ergonomics as a field of study. Examples of applications of ergonomics in design. Types of data from human at physical, physiological, cognitive and affective levels. Data gathering and analysis techniques. Use of descriptive and inferential statistics in ergonomic data. Applications of mean, median, mode and percentile in anthropometry. Use of anthropometry in workstation design. Human physiological potentials and limitations in terms of load carrying capacity. Concept of comfort, fatigue and stress. Design for the cognitive user. Concept of mental workload. Cognitive perspective in control panel design and graphical user interface design.

DSL731 Optical Components and Basic Instruments

3 credits (3-0-0)

Generation of light: Thermal, non-thermal and semiconductor light sources. Measurement of light and instrumentation, Properties and propagation of light; The Ray Optics, Wave Optics, and Electromagnetic Optics; Basics of interference, diffraction and polarization of light. Optical Components: Reflecting components, plane, Spherical, paraboloidal, total internal reflection. Refracting components; Converging, diverging and combination of lenses, Design analysis and image formation by lenses, Wavefront aberrations; Monochromatic (Seidel), and chromatic aberrations. Eyepieces: Huygens, Ramsden, and special eyepieces; Prisms, Polarizing prisms: Glan Taylor Polarizer, Glan- Thomson prism polarizer, Rochon Prism Polarizer, Senarmont prism polarizer, Wollaston Prism, Phase plates ($\lambda/2$, $\lambda/4$), Soleil – Babinet compensator, Diffracting components; diffraction by single/multiple/openings, types of gratings and fabrication techniques, diffractive optical elements. Polarizing components; Polarization by reflection, and double refraction, birefringence crystals, and polarization based optical devices, Rotatory Polarization, Polarization rotators; Optical instruments: Microscopes, Telescopes, cystoscope; Refracting, reflecting, interferometric telescopes. Interferometers; two- beam, multiple-beam, and shearing interferometers; Detectors: Photodetectors, CCD and CMOS detectors, IR-detectors.

DSP731 Communication and presentation skills

3 credits (1-0-4)

Concept of sketching for designers, sketching through geometrical shapes, Sketching in isometric grids, sculpting conceptual objects while sketching through cuboids. The use of shade and shadows, Rendering, physical product modeling through frugal materials and by the use of MDF, HIPS, Vacuum forming, modeling in FRP, product photography, video recording for presentations.

DSL732 Adv Mat Processes & Die Design

3 credits (2-0-2)

Understanding properties and selection of natural and manmade materials including metals, plastics, ceramics, composites and natural materials.

Understanding various manufacturing and prototyping methods including digital manufacturing/ prototyping.

Hands on product realization exercises involving selection of materials and manufacturing processes.

Die and mould manufacturing methods including surface treatment and finishing processes.

Prototyping projects involving CNC, 3-D Printing, Vacuum forming, etc.

DSL733 Optical Materials and Optical Techniques in Instrumentation

3 credits (2-0-2)

Optical materials: Optical and mechanical characteristics of optical glass, metal optics, plastic optics and optical crystals, Manufacturing of optics on optical glass and plastics, Injection molding of plastic optics, Single point diamond turning and CNC milling and micromachining, replication techniques

Photo-Lithography and its optical system, Illumination and projection systems, Astronomical and remote sensing systems, detectors: Thermal detectors, photon detectors and Imaging detectors.

DSL734 Laser Based Instrumentation

3 credits (3-0-0)

Radiation and matter interaction and fundamental of LASER action. The LASER and it's properties. Laser systems - gas and semiconductor LASERS. LASER beam optics and propagation of LASER beams. Fundamentals of holography - basic theory of holography, recording medium and type of holograms for display purposes. Applications of holography in metrology - Holographic Interferometry, double exposure, time averaged and real time holographic interferometry. Laser speckles and laser speckles techniques. Digital speckle pattern interferometry (DSPI) and digital holographic interferometry (DHI) in measurements of displacement, refractive index, temperature, shape, vibration and material properties. Two wavelength and phase-shifting interferometry. Laser based temperature measurement techniques. Collimation testing and laser based alignment systems. Laser based techniques for low frequency and high frequency vibration measurements. Talbot interferometry and its applications in scientific and industrial measurements. Shearing interferometry and its applications in scientific and industrial measurements. Sensing of high currents on high voltage lines using magneto optic effect.

DSL737 Display Devices and Technology

3 credits (3-0-0)

Human vision. Basics of luminescence, fluorescence, and phosphorescence. Display materials and their characterization. Emissive displays: Review of cathode ray tube (CRT) displays. Plasma display devices and technologies, field-emissive, electro-chromic and photo-chromic displays. Inorganic, organic and polymeric LED based display devices: Device physics, materials, fabrication processes, structures, and drive circuits. Electro-optical characterization of LEDs. Transparent thin film (TFTs) displays, electronics, and manufacturing technologies and applications.

Non-emissive displays: basics of liquid-crystal materials, their properties and characterization. Liquid-crystal display devices and

technologies. Transmissive, reflective, active and passive matrix, thin-film transistor (TFT), transreflective, and back lighting technologies for LCDs.

Electronic-ink, electronic paper, and flexible and transparent display technologies and their applications. Laser based projection displays

Display electronics and digital light processing technologies. Three-dimensional (3-D) imaging and display technologies: Micro-displays, STEREOSCOPIC 3D displays. HOLOGRAPHIC 3-D displays. Laser based 3D-TV.

DSL740 Instrument Organization and Ergonomics

3 credits (2-0-2)

Functions of instrument systems, classification of tasks as man-machine systems, need analysis, product specifications, solutions search, product planning, systems break-up. Strengths and weaknesses of the machines.

Understanding the potentials and weaknesses of the human beings, application of force, load lifting, load carrying, stride patterns. Functions of controls and displays, handles, levers, knobs, switches, dials, LCD screens. Hand-held devices, workstations, large control systems.

Identification of constraints emerging from scientific, technical, production, environmental and maintenance considerations. Aesthetics of color, form and graphics. Value engineering. Design of manuals, job-aids and training aids.

Case studies, Exercises & Projects.

DSP741 Product Interface & Design

2 credits (1-0-2)

A product as a living organism, its interface externally with the environment and internally with its components. 2. Interface for modulating user involvement. 3. Product Semantics, communication of feelings, 4. Communication of structure and purpose. 5. Communication through form, color, graphics and text. 6. Typography choice and readability, Printing and Transfer Techniques. 7. Product graphics. 8. Functioning of controls and display elements, knobs, push buttons, handles and electronic displays. 9. Investigation and study of visual, functional and ergonomic requirements of controls and displays, legibility of display elements. 10. Study of different textures, patterns and materials. 11. Area, volume and Proportion. 12. Order and system. 13. Human factors and safety in interface design. 14. Individually planned design projects involving research analysis and design of product interface.

DSL751 Form and Aesthetics

3 credits (2-0-2)

Elements of design, Nature inspired design, Gestalt, Product semantics, Color theory and color trends, Varied approaches for form, Product styling, case studies and design discourse on form, exercises on from development of a product (existing or conceptual).

DSR761 Social Immersion :

1 credit (0-0-2)

Documentation of societal issues through photography, recordings, sketches. Identification of locale of working, Identification of a potential societal issue. presenting the societal issues as a report/ presentation/ video.

DSR762 Vehicle Design

3 credits (2-0-2)

History of transportation, technology trends in transportation and futuristic predictions. Types of personal vehicles, mass transportation vehicles, their benefits and challenges in design. Trends and styling of two wheelers and four wheelers. Material and finish considerations in styling. Use of mood boards and cultural trends in transportation design. Vehicle design for rural India. Design projects and exercises.

DSR772 Transportation Design

3 credits (2-0-2)

Understanding different segments of design practice in transportation. Different role of designers in Automobile Industry. Design of human powered vehicles, Two wheelers design, Design of four wheelers, future of transportation, Styling, Professional practice: CAS and Clay.

DSL782 Design for Usability

3 credits (2-0-2)

History of product increase in complexity and usability since WW-2. Story of transition in human society from Man-Machine Interaction to Human-Computer Interaction. Relationship between product complexity and mental workload. Subjective and objective measurements of product complexity and mental workload. User centered design process for usable product design. Introduction to concept of 'mental models' and exercises in understanding users' mental models. Creation of Personas and scenarios. Conduct of task analysis. Operational definitions of usability. Measurement of ease of use, efficiency and effectiveness of digital products. Design of interactive products from usability perspective. Development of user screeners, testing protocols and conduct of usability tests. Creation of paper prototypes, wireframes, information architecture. Conduct of low fidelity tests, card sorting, reverse card sorting, affordance tests, high fidelity testing and brand testing.

DSD792 Design Project1

3 credits (0-0-6)

Aim of the project to help the student independently solve a design problem against an pre-identified design brief.

DSD801 Major Project Part 1

6 credits (0-0-12)

DSR801 Summer Internship:

2 credits (0-0-4)

Identifying of the project area, setting the objectives, milieu and deliverables of the Internship. report writing/Presentation.

DSD802 Major Project Part 2

12 credits (0-0-24)

DSL810 Special Topics in Design 1

3 credits (3-0-0)

Special topics in design.

DSL811 Selected Topics in Instrumentation-I

3 credits (3-0-0)

Advanced course on Selected Topics in Instrumentation to the M.Tech. Instrument Technology Programme.

DSC812 Term Paper and Seminar

3 credits (0-3-0)

DSR812 Media Studies

3 credits (2-0-2)

o enable designers to use different media optimally. Principles and processes of photography, videography, print and animation. Study of design constraints and affordances in differ media. Exercises in photography, videography, print, animation Cinematography etc. Design of corporate identity programs.

DSL814 Selected Topics in Instrumentation-II

3 credits (3-0-0)

Advanced course on Selected Topics in Instrumentation to the M.Tech. Instrument Technology Programme.

DSL815 Special Topics in Instrumentation

1 credit (1-0-0)

DSL820 Special Topics in Design 2

3 credits (3-0-0)

Special topics in design.

DSV820 Special Modules in Design

1 credit (1-0-0)

DSR822 Design for Sustainability

3 credits (2-0-2)

Concept of sustainability, Tipple bottom line, world vision for sustainability, Emerging trends in the area of sustainability, Metrics for measurement of sustainability, Product lifecycle management and sustainability, Ecodesign.

DSR832 Design for User Experience

3 credits (3-0-0)

Importance of user experience approach in design. Methods to understand users' experiences. Modeling of user behaviors. Cognitive, affective and cultural perspectives in experiences. Consideration for human experiences in interaction design. Methods of direct, indirect, subjective and objective measurements of human experience. Issues of reliability and validity in experience measurement. Qualitative interview techniques for gathering user motivations and emotions. Analysis of qualitative experiential data from users. Gender and cultural biases in experience measurements. Management of psychological space in user experience testing setups. Development of user experience strategy, creation of user interfaces and testing of digital products from experiential perspective.

DSL841 Design Management and Professional Practice

3 credits (3-0-0)

considerations in professional design startups including setting up a design office, getting finances, finding clients, running the office, business correspondence, brief and briefing, feasibility reports, letters of contract. Estimates of design fee as lump sum, hourly basis, consulting, commissioning and royalties. Study of govt. regulations, consumer protection acts, ISI standards, design registrations, patents and copyrights. Professional ethics in design practice. Creativity theory. Integrated product development. Assessing risks and opportunities. Cost cutting in design.

DSR852 Strategic Design Management

3 credits (2-0-2)

Branding and brand development, Repositioning in market, disruptive innovation for market capitalization, Retail design, design of services, designing for new businesses.

DSR862 Design in Indian Context

3 credits (3-0-0)

Introduction to culture from product design perspective. Models and definitions of culture. Product design culture of India. Culture as an aid in consumer product choice. Cross cultural biases in product decisions. Cross cultural design teams. Considerations in designing for a user from another culture. Exercises in product as a cultural thought. Culture in evolutionary perspective and design of new material cultures through products and lifestyles design.

DSD891 Design Project -2

6 credits (0-0-12)

The student will be able to practice the design process to solve a professionally challenging design problem. The student should exhibit the sensitivity to the multidimensionality of the problems in the design domain. They should be able to prove their design outcome as viable and practice solution for the given problem. The students are expected to exhibit their work to the professional community.

DSD892 Industry/ Research Design Project

9 credits (0-0-18)

To develop the ability to look at design problems from a research perspective. The student is expected to contribute to the professional design field thorough new design knowledge generation. The project is aimed to polish the designer's research skills. The designer is expected to deliver cutting edge research and be able to articulate it professionally.

Centre for Polymer Science and Engineering

PTV700 Special Lectures in Polymers

1 credit (1-0-0)

There will only be special lectures followed by a final assignment or quiz.

PTL701 Polymer Chemistry

3 credits (3-0-0)

Introduction to polymers, nomenclature, addition, condensation, chain growth and step growth polymerization, kinetics of polymerization, material classes, polymerization techniques: bulk, suspension and emulsion polymerization; cationic, anionic and free radical polymerization; copolymerization, reactivity ratios; atom transfer radical polymerization.

PTL702 Polymer Processing

3 credits (3-0-0)

Course covers the classification of polymer processing operations, extrusion, molding based processes, compounding and mixing, thermoforming and other processing methods.

PTL703 Polymer Physics

3 credits (3-0-0)

The course content will include polymer molecules, their conformations, crystalline and two phase structures and their effects on various thermo-physical properties such as melting, glass transition and crystallization kinetics.

PTL704 Polymer Technology

3 credits (3-0-0)

Polymers of commercial importance; additives for plastics; stabilizers, fillers, plasticizers and extenders, lubricants and flow promoters, flame retardants, blowing agents, colourants, cross-linking agents and biodegradation additives; manufacture, properties and applications of major thermoplastic and thermosetting polymers: polyethylene, polypropylene, poly(vinylene chloride), polystyrene and other styrenics, phenol-formaldehyde, urea-melamine formaldehyde and unsaturated polyester resins.

PTL705 Polymer Characterization

3 credits (3-0-0)

Molecular weight and molecular dimensions by end-group analysis, osmometry, light scattering, viscometry, gel permeation chromatography, MALDI-TOF, Infra-red, NMR, UV-visible and Raman spectroscopic techniques. Thermal properties by differential scanning calorimetry, differential thermal analysis, thermogravimetry; Microscopy: optical and electron microscopy, X-ray scattering from polymers, small angle light scattering; crystallinity by density measurements. .

PTL707 Polymer Engineering and Rheology

3 credits (3-0-0)

Course covers Newtonian and non-Newtonian flow, simple shear flow and its significance, normal stresses, simple elongational flow and its significance, viscoelasticity, Rheometers, molecular, theoretical and related models.

PTP709 Polymer Synthesis and Characterization Laboratory

2 credits (0-0-4)

Experiments: identification of polymers; purification of monomers; suspension polymerization of styrene; emulsion polymerization of vinyl acetate and butyl acrylate; bulk and solution polymerization of methyl methacrylate; preparation and testing of epoxy resins; unsaturated polyester resin technology; preparation of nylon 6 and nylon 10 by interfacial polymerization; copolymerization and determination of reactivity ratios; epoxide equivalent; molecular weight determination by viscometry and end-group analysis; atom transfer radical polymerization of styrene; thermal characterization by DSC and TGA; GPC; FTIR and NMR.

PTP710 Polymer Rheology and Processing Lab

1 credit (0-0-2)

The course comprises of eight regular experiments on various processing equipments and two experiments dealing with rheology of polymer melts.

PTL711 Engineering Plastics and Speciality Polymers

3 credits (3-0-0)

Introduction to engineering polymers, applications, processing, thermoplastic engineering plastics, polycarbonates, polyimides, polyphenylene oxide, liquid crystalline polymers, poly(ether ketone), thermosets, speciality polymers, hydrogels, conducting polymers, fluoropolymers.

PTL712 Polymer Blends and Composites

3 credits (3-0-0)

The course will cover definition and classification of blends and composites, miscibility, phase behaviour, nature of interface, nature of polymer matrices, reinforcements, basic theoretical models to predict mechanical properties and the role of fibre length, distribution, dispersion etc. on the performance properties of polymer based blends and composites .

PTL713 Polymer Testing and Properties

3 credits (3-0-0)

Properties of polymers and their measurements by standard test methods; tensile, flexural and impact properties; hardness, abrasion resistance and long term fracture properties; softening point, heat distortion temperature, thermal expansion coefficient and thermal conductivity; electrical insulation and conductivity; sorption, diffusion and permeation of gases/liquids through polymer membranes; standards used are BIS, BS, ASTM, ISO and DIN; correlation of test with actual performance; statistical quality control in various tests.

PTL714 Biodegradable Polymeric Materials

3 credits (3-0-0)

Concept of biodegradation; mechanism of biodegradation; kinetics of biodegradation; methods to evaluate biodegradation; bioplastics, biodegradable polymers and their synthesis; biodegradable polymer blends and composites; technology and processing of biodegradable polymers; applications of biodegradable polymers.

PTL716 Rubber Technology

3 credits (3-0-0)

Rubber and elastomers, compounding and vulcanization, mastication, fillers-reinforcing and non-black (loading type). Other compounding ingredients; peptizers, vulcanizing agents, accelerators, accelerator activator, softeners, anti aging additives, miscellaneous additives, colourant, flame retarders, blowing agents, deodorants, abrasive retarders etc. Processing and vulcanization tests, vulcanization theory and technology, natural and synthetic rubbers, styrene butadiene rubbers, polybutadiene and polyisoprene rubbers, ethylene-propylene rubber, butyl and halobutyl rubber, nitrile and silicone rubber, thermoplastic elastomers, acrylate and fluoro elastomers. .

PTL718 Polymer Reaction Engineering

3 credits (3-0-0)

Course covers reaction kinetics in condensation and all types of addition polymerisation reactions, prediction of molecular weight for polymerisation in different types of reactors, batch and continuous processes, the effect of mixing on kinetics and MWD, reactor design.

PTL720 Polymer Product and Mould Design

3 credits (2-0-2)

Course covers the types of moulds and dies, product and mould design, details of construction and manufacturing methods of tools, dies and moulds.

PTL722 Polymer Degradation and Stabilization

3 credits (3-0-0)

Introduction to degradation, thermal and oxidative degradation; radiative, mechanical and chemical degradation; biological degradation; degradation pathways for common polymers; methods to monitor degradation; mechanical degradation, waste management.

PTL724 Polymeric Coatings*3 credits (3-0-0)*

Introduction and mechanism of adhesion of polymeric coatings on various substrates. Solvent based polymeric coatings. Water based polymeric coatings. UV and EB curable coatings. 100% convertible coatings. Selection criteria of coatings for various substrates. Health, safety hazard and environmental aspects of coatings during manufacturing and applications.

PTL726 Polymeric Nanomaterials and Nanocomposites*3 credits (3-0-0)*

The course content includes the basic concepts and elements related to the understanding of nano structured polymer materials and nanocomposites.

JPD799 Minor Project*3 credits (0-0-6)*

A project in any area of polymers as decided by the supervisor.

JPD801 Major Project Part-I*6 credits (0-0-12)*

A project in any area of polymer science and technology.

JPD802 Major Project Part-II*12 credits (0-0-24)*

A project in any area of polymer science and technology.

JPS800 Independent Study*3 credits (0-3-0)*

The course contents are as defined for the program elective courses offered by the Centre.

Centre for Rural Development and Technology

RDL700 Biomass Production

3 credits (3-0-0)

Introduction to biomass and biomass classification.

Phytobiomass : Primary production-photosynthesis, measurement of productivity and statistical analysis of data. Plant's nutrient cycles. Plant improvements-Tissue culture and other vegetative methods, seed technology and nursery raising. Biofertilizers, bioinoculants and biopesticides-Organic manures, nitrogen fixers, phosphorus solubilizers and organic matter decomposers, allelopathy, interactions among micro and macroflora and biological equilibrium. Plantations and cropping pattern agroforestry models, plantations crops, tuber crops, petro crops, forage crops and grasses. Soil and water conservation in farm, grassland and forest management. Aquatic Phytobiomass-Floating plants, submerged plants and potential aquatic algal biomass. Animal biomass : Cow, buffalo, goats, sheep and pigs. Fisheries and bee keeping.

RDL701 Rural Industrialisation: Policies, Programmes and Cases

3 credits (3-0-0)

Background: Rural Industrialisation, India's rural poverty and possible solutions, Rural Industrialisation during planned era. Farm & Non-Farm Sector Synergy: Lessons from Asian experience, Rural Industrialisation in China: Township & village enterprises. Rural transformation through decentralized technologies, Sustainable Livelihoods: Participatory Management Approach, Appropriate strategy for Rural Industrialization, Policies for Rural Industrialisation Entrepreneurship, Development for Rural Youth, Women and appropriate Technology in Rural Industrialization, Industrialization of rural areas around urban centres, Industrialization in tribal area, Role of Govt & Financial Institutions in Rural Industrialization, Role and Impact of District Industries Centres in Rural Industrialization, Gramodaya Scheme and rural industrialization, Development of Handloom Industry, Growth of production & employment in KVs in India, Rural Industrialisation through Artisanal industry, Rural Industrialisation: Case Studies, Industrialisation of a drought-prone district: Grass root level planning, PURA Model of Rural Development, Some successful case Studies.

RDL705 Rural Resources and Livelihoods

3 credits (2-0-2)

Overview of different Livelihood Systems, Socio-economic, cultural and historic perspectives, Linkages between sustainable livelihood systems and development, Issues of subsistence and survival, challenges and threats, livelihood, Impact of globalization on livelihood systems, Formal and informal sector livelihood sources, Issue of Women, Agro-based/Post Harvest Technology based Livelihoods, Problems and challenges for agro-based small enterprises, Natural Resources based livelihoods, nature dependency, Scope, challenge for survival & enhancement of Natural Resource based livelihoods, Craft-based livelihoods, Challenge/Problems of traditional crafts, Need and strategy for preserving/revival of crafts and craftsmen, New product & service based livelihoods, SWOT for survival & growth, Sustainable Resource use and Livelihoods, Role of Continuing Education, Skill Development & EDP, Enterprise Management, SHGs, Cooperatives, Microenterprises Identifying entrepreneurial opportunities & mkt potential, Up scaling Microenterprises to SMEs – Issues & Perspectives, Importance and Scope of Training for Development, Goals for designing training programmes for development Self Development, Organisational development, Team Building, Skill Training, Technology Transfer etc., Types and Methods of training & learning, learning paradigms, Training :Strategy and Designs, Need Assessment Training: Planning, Methods and interaction styles, Evaluation: Types, process, components, methods, techniques, Framework & indicators for evaluating Training Programmes Post Training factors, Tourism & Livelihoods, NTFP based livelihood.

Field projects related to Natural resource based livelihoods.

RDL710 Rural India and Planning for Development

3 credits (3-0-0)

Historical and Geographical Aspects : Ancient and present structure of villages characteristics of rural life, zonal and regional peculiarities,

social and religious stratifications.

Social Aspects : Influence of religion/tradition/superstitions, psycho-social and cultural background and practices, barriers, life patterns including community living, status of women, migration. General Aspects: Health education, nutrition, sanitation, housing, indebtedness, disparity, unemployment and wage pattern. Changes in techniques of production and requirements of storage, transportation and marketing facilities, private and public finance, rural banks. Postal and other services. Political Aspects : Village Panchayats and links of rural society with state's organisations; functions and role of various organisations. Planning for Rural Development : Historical perspective. Gandhian ideas and their impact; planning in independent India and emphasis on integrated rural development and attempts at rural reconstruction. Shift in development policies. Role of S&T voluntary, government and other agencies in rural development.

RDL722 Rural Energy Systems

3 credits (2-0-2)

Biomass based energy systems, Pyrolysis : Concept, Types, Technology & Waste Management, Gasification: Concept, Technology, Design, Operation and Uses, Biogas Technology, Biogas production using various substrates including MSW and industrial wastes, Types of digesters and feed materials, Biogas power generation, biogas enrichment and bottling technology, Entrepreneurship avenues in Biogas sector, Biogas to Natural gas – BBG technology, Bio diesel: potential and scope in India, Bio-diesel production technology: Uses and Advantages, Ethanol as Alternate fuel, Ethanol production Technologies, Uses and Advantages Problems, Cook Stoves, Multifuel and biomass cook stoves, improved chulhas, Micro Hydel : Site characterization, Hydro potential estimation, Micro Turbines-Classification, design, sizing analyses, Hydel power utilities, Techno economic feasibility and social issues, Animal power: Application and power generation, Solar Energy Technologies, Solar Pond, Solar Photovoltaic, Concept of Hybrid energy system: Value proposition and benefits, Creating renewable energy based livelihood and micro enterprises Integrated Rural Energy Planning : Objectives, Technical options Benefits, Financial Incentives.

RDL724 Technologies for Water and Waste Management

3 credits (2-0-2)

Water and wastes: General considerations, Role of water in life, Water crisis & causes, Concept of waste, Solid wastes & industrial effluents, Hazardous and toxic wastes, Natural cycles for zero waste systems, Eco sanitation, Water resources and management, Rainwater, runoff and ground water, Rainwater harvesting, Water storage and lifting devices, Processes for degrading waste, Role of microbes, earthworms, Anaerobic Digestion, Aerobic processes, Thermo-chemical pathways, Water and waste in the domestic sector, Drinking water and non-potable uses, Domestic wastewater quality and recycling options, Domestic solid waste management, Micro enterprises for waste & water treatment, Agricultural systems, Irrigation requirements and water audit, water conservation measures, Composting and its application, Water management in industries, Water requirement in industries, Environmental regulations, wastewater treatment and recycling in rural industries.

RDL726 Herbal, Medicinal and Aromatic Products

3 credits (2-0-2)

Herbal, Medicinal and Aromatic plants of India: Overview and Uses Ayurveda, Siddha, Homeopathy, Unani & Tribal systems of Medicine, Role of Traditional Medicine in Primary Health Care, Identification of Medicinal and Aromatic plants, Classification of Medicinal plants, Pharmacology and Photochemistry, Medical Bio-prospecting and Chemo prospecting, Biomarkers, Active principle and Phytomedicine, Cultivation, Harvesting and Storage of Medicinal and Aromatic plants: Organic farming of Medicinal and Aromatic Plants, Good Agriculture Practice, Post-Harvest Processing of Medicinal and aromatic Plants, Cleaning and Washing, Drying, Grinding, Processing of Medicinal and Aromatic plants – Extraction, Purification of Active Principle/Phytomedicine – Distillation, Herbal food formulation, Herbal cosmetics and Cosmochemicals, Nutraceuticals, Mosquito control Products, Aromatherapy, Herbal Veterinary medicine, Natural Dyes and Colours,

Quality Control and Analysis.

Practical and Project related to Herbal, Medicinal and Aromatic products.

RDL730 Technology Alternatives for Rural Development

3 credits (3-0-0)

Concept of technologies appropriate for Rural India. Social, economic and environmental considerations. Appropriate technology for energy, agriculture, housing, textiles, water-supply and sanitation, health care, transport and small-scale industries. An integrated approach to the use of alternate technologies. Issues of technology transfer.

RDL740 Technology for Utilization of Wastelands and Weeds

3 credits (3-0-0)

Land as a parameter in rural development. Wastelands and importance of using them. Biomass growth on various types of lands. Introduction to plant taxonomy, under-utilized terrestrial plants and aquatic weeds, flora of tropics, arid lands and hilly areas. Constituents of biomass, biochemical and chemical conversion processes.

Applications of biomass as unconventional plant-based source for food, cattlefeed, chemicals, fibres, construction materials and energy. An integrated technological approach to biomass and wasteland utilization. Possible ecological effects.

RDD750 Minor Project: Intensive Study on Topics of Specific Interest

3 credits (0-0-6)

Project work related to any topics of interest within the specified time frame.

RDP750 Biomass Laboratory

3 credits (0-0-6)

Soil and Water analysis for Biomass Production : Soil Sampling from a plot/field and soil analysis for its texture, pH. EC. C.N.P and K. Water analysis : TDS, Alkalinity, Total Hardness, EC and pH.

Soil Microflora and Root Association : Isolation and culturing of nitrogen fixers (Rhizobium, Azotobacter, Azospirillum and blue green algae). ecto and endomycorrhizal fungi. Measurement of total microbial biomass in soil and respiration rate of microbes. Bacterial and fungal root infection.

Biomass Production and Recycling : Micropropagation and other vegetative techniques for biomass production. Seed treatment. seed germination and nursery raising. Vermiculturing and Vermicomposting, mushroom culturing and spawn production, silkworm rearing. Bioinoculants for rapid composting.

Compost Analysis : C.N.P.K. cellulose, hemicellulose, lignin, humus and its fractions. Physico-chemical properties of biomass.

RDL760 Food Quality and Safety

3 credits (3-0-0)

Concept of Holistic Health, Holistic Food, Food Quality & Safety. Food quality parameters and standards, (Natural and chemical preservatives & colors, toxins, pesticides, pathogens etc. Nutrients (macro and micro), shelf life, seasonal food and diversity 'satvik' characteristics), Food processing industries-Current Status and Policy guidelines, Multi residue analysis and mycotoxin contamination in food, Processing techniques for enhancing bioavailability of micronutrients, Minimizing pesticide residue and mycotoxins in food products, Organic food: quality control and export potential, APEDA and IFOAM Certification 'BIS, MRL's under India conditions etc. Policy and regulatory safe guards, Food fortification and Nutraceuticals, Traditional as well

as modern system, Botanicalpesticides for stored grain protection, Major storage pests and their life cycle, traditional system and their limitations, Traditional systems and their limitations (storage structures, pest control measures etc.) Innovations, Village cluster Grain storage model for Rural Entrepreneurship, Enhancing shelf life of G-K products, grain flour, raw milk, fruits and vegetables, bamboo shoot mushroom etc., Equipments & machinery for food processing and preservation small scale food outlets (vendors), SHG, WTP and quality control (case study).

RDL801 Successful Grassroot Organisations

3 credits (2-0-2)

The Domain and Challenges of Agricultural and Rural Development, Participatory Approaches to agricultural and Rural Development, Participatory approach in the irrigation sector, Learning process and assisted-Self-Reliance, Initiation & Leadership, CASE STUDIES-Set I, The AMUL Dairy Cooperatives, The Grameen Bank Story: Rural Credit in Bangladesh, CASE STUDIES - Set II SEWA: Women in movement, The Bangladesh Rural Advancement Committee, CASE STUDIES - Set III Participatory Watershed Development in Rajasthan, The self-Help Rural Water Supply Program in Malawi, CAMPFIRE Program: Community- Based Wildlife Management, Management, Planning and Implementation, Technology and Training, Information as a Management Tool, Utilization of External Resources, Dealing with Government and Politics, Understanding Social Capita from experience of participation, Mapping &Measuring social Capita-Assessment of collective action, Understanding civil society as a continuum, Measuring empowerment at community & local level-Analytical Issues, Strategies for strengthening organizations at the local level success & Sustainability : Strategic Goals for Planning & Management.

RDL802 Informatics and Rural Development

2 credits (2-0-2)

Introduction to ICT and Elements of ICT, Trends in Computing & Telecommunication Technologies, User Devices, Transmission Technologies, Wireless Technologies, Emerging Trends and Convergence, ICT a Tool for Socio-Economic Development, Information Revolution and Information Society, Social Informatics : ICT & RD, Impact of ICT for Development & Critique, ICT a Tool for Rural Empowerment, Techniques for Access to Technology, ICT in Agriculture, ICT for Rural Market, ICT in Dairy Mgmt, ICT & GIS, e-Government and Rural Development, What is e-Government and e-Governance, Trends in e-Government, Application of e-Gov for Service Delivery, Access to Information, Grievance Redressal, Some Cases of e-Governance for RD, Implementation of ICT in Rural context, Software project management approach, Models of implementation, Rural Needs Assessment, People first approach to rural informatics, Citizen participation in Design of rural informatics, Role of Community based organisations, Challenges to rural informatics, digital divide, Gender and other marginalised groups in information society, Issues in use of ICT for RD, Critical success factors for e-Gov in Rural Context, Global scenarios and national policies, International organization, regulatory interventions in computing and telecom industry, Cyberlaws & IT act of India.

RDL807 Women, Technology and Development

2 credits (2-0-2)

Role of women in development, Gender bias and indicators, Strategies for women empowerment, Technology and Women uplift, Women and energy, Women and water management, Women and health care, Women and holistic health, Women and Vector control, Women in farm sector, Women in non-farm sector, Women in the service sector, Women and information technology.

Field projects related to Women, Technology and Development.

National Resource Centre for Value Education in Engineering

VEL700 Human Values and Technology

3 credits (2-1-0)

Present state of society-achievements and maladies. Notions of progress, development and human welfare. Distinction between 'pleasure' and 'happiness', 'good' and 'pleasant', 'needs' and 'wants'. Are there any universal human values? Complementarity of values and knowledge. Typical modern technologies- their impact on mankind. Fundamental characteristics of modern technology-their relationship to values. Sustainability of modern technology. Values for harmonious and sustainable development. Rationales behind universal human values. Values and humanistic psychology. Practical difficulties in living upto these values typical dilemmas. Need for inner transformation. Various approaches towards purification of mind. Concept of holistic development and holistic technology. Integrating scientific knowledge and human values, understanding engineering ethics.

VEL710 Traditional Knowledge Systems and Values

3 credits (3-0-0)

The values inherent in The Traditional Knowledge Systems (TKS) viz., respect for all life and non-life, respect for diversity; awareness of social and ecological impact of activities; self-sufficiency; sustainability, socially appropriate, use of local natural and knowledge resources viz., decentralized, aesthetically pleasing, wealth distributive etc. It would be emphasized that these values are inherently present in the framework of traditional knowledge systems and are not add-ons. Traditional Technologies which are developed as part of the TKS framework are invented and tested in the field, where all environmental and social interaction, in particular its effect on other life-forms known and unknown are allowed to play their part. This non-fragmented approach makes such knowledge holistic and avoids the errors and pitfalls when technologies are applied on the basis of incomplete or inadequate theories.

VEV731 Special Module on Inner Development-I

1 credit (0.5-0-1)

This module will primarily consist of courses which address one or more aspects of inner development such as comprehensive mindfulness, in-depth intellectual understanding of oneself and one's aspirations, selfless service etc. These courses are expected to provide a practical experience to the students in how small positive changes can be brought about in one's inner self through a systematic practice of looking within.

VEV732 Special Module on Inner Development-II

1 credit (0.5-0-1)

(Same as VEV731).

VEV733 Special Module on Leadership-I

1 credit (0.5-0-1)

This module will address the strong linkages between the personal values of an individual and the desirable qualities of a leader. Going beyond the theories, it will emphasize on the practical aspect of looking within as well as connecting to the outside world and hence developing the qualities of a leader.

VEV734 Special Module on Leadership-II

1 credit (0.5-0-1)

(Same as VEV733).

VEV735 Special Module on Sustainability-I

1 credit (0.5-0-1)

This module will consist of courses which address one or more aspects of sustainability vis-a-vis the societal value system. The three core components of sustainability, viz, sustainable use of resources, environmental protection and equity in the society need to be understood in-depth with respect to the values of excessive materialism and individualism, competitiveness and unlimited economic growth on one hand and the values of compassion, fraternity and cooperation on the other. The practical sessions will be used to carry out group exercises of planning and analysis of real life case studies.

VEV736 Special Module on Sustainability-II

1 credit (0.5-0-1)

(Same as VEV735).

VEV737 Special Module on Civilization-I

1 credit (0.5-0-1)

This module will address one or more aspects of development of civilizations and promotion of societal peace which have strong linkages with the value system of the society. This could include value systems reflected in constitutions of different countries, the way a society deals with human rights and the like.

VEV738 Special Module on Civilization-II

1 credit (0.5-0-1)

(Same as VEV737).

VEV739 Special Module on Professional Ethics-I

1 credit (0.5-0-1)

This module will bring out the need for professional ethics as recognised by several professional bodies in the world through discussion of practical case studies and the underlying tenets of the code of conduct of professional bodies. The course will initiate discussion on reasons behind deviation from these tenets and the relevance of these tenets of professional ethics in the contemporary world.

VEV740 Special Module on Professional Ethics-II

1 credit (0.5-0-1)

(Same as VEV740).

VED750 Minor Project

3 credits (0-0-6)

To carry out detailed studies (under the guidance of a faculty member) on issues like Science, Technology and Human Values, Engineering Ethics, Sustainable Development, Scientific basis of human values etc.

Amar Nath and Shashi Khosla School of Information Technology

SIL765 Networks & System Security

4 credits (3-0-2)

The goal of this course is to introduce challenges in securing computer systems and networks. We will discuss various types of vulnerabilities in existing software interfaces, such as buffer overflows, unsafe libc functions, filesystem design issues, etc. We will also discuss modern-day defenses against attacks exploiting these vulnerabilities. In network security, we will discuss security problems in network protocols and routing, such as sniffing, denial of service, viruses, worms, etc. and defenses against them. The course will involve reading research papers on relevant topics, programming assignments, and projects.

SIL769 Internet Traffic -Measurement, Modeling & Analysis

4 credits (3-0-2)

Internet architecture: overview of TCP/IP protocol stack. Mathematics for studying the Internet: Review of basic probability and statistics, analytic modeling approaches. Practical issues in Internet Measurements: Challenges, tools and techniques for measuring performance. Internet Traffic Characterization: Poisson models for Internet traffic, self-similarity in network traffic. Web Performance: workload characterization, caching, content distribution networks. Multimedia Systems: Video-on-Demand, IP-TV, Peer-to-Peer file sharing, Peer-to-Peer Streaming. Social Networks. Network Security.

SIL801 Special Topics in Multimedia System

3 credits (3-0-0)

Content of this course, depending upon the teacher, will be focused on some aspect(s) of multimedia systems like content based retrieval, multimedia communication, compression techniques, speech and audio technology, etc.

SIL802 Special Topics in Web Based Computing

3 credits (3-0-0)

Content of this course, depending upon the teacher, will be focused on some aspect(s) of web based computing like semantic web, web based distributed computing, search methods, etc.

SIV813 Applications of Computer in Medicines

1 credit (1-0-0)

This course will consist of 14 lecture-hours that focus on information and communication technologies (ICT) that are being developed and used in medical education and clinical practice today. Various technologies ranging from computer aided instruction (CAI), simulations, and networked applications at one end to electronic medical records (EMR), telemedicine, and robotic surgery at the other end will be described. The process of research, development, and evaluation in the designing and making of these applications and tools will be detailed. Writing assignments, creative thinking, and interactive discussions will form an integral part of this course.

SIV861 Information and Comm Technologies for Development

1 credit (1-0-0)

Notion of appropriate technology; case studies of ICTD projects such as KioskNet, WiLDNet (Wireless Long Distance Networks), AIR (Advanced Interactive Radio), Spoken Web, GRINS (Gramin Radio Inter Networking System), Digital Green; design principles to be kept in mind; evaluation methodologies.

SIV864 Special Module on Media Processing & Communication

1 credit (1-0-0)

Communication today has rich multimedia contents. Under the varying bandwidth attention is required for appropriate processing of the media contents satisfying desired quality of service. This course will focus on bringing the two broad areas of multimedia processing and communication together. In media processing fundamental concepts of media processing and compression will be introduced with exposure to current techniques and standards. In communication protocols and algorithms for both wired and wireless networks will be discussed in relation to multimedia communication.

SIV871 Special Modul in Computational Neuroscience

1 credit (1-0-0)

Special module that focuses on research problems of importance in this area of Neuroscience from a computational perspective. Specific coverage will vary with each offering, and may include project work and design / case studies. Topics for each offering of the course will be separately listed.

SID880 Minor Project in Information Technology

3 credits (0-0-6)

SIV889 Special Module in Human Computer Interface

1 credit (1-0-0)

Special module that focuses on research problems of importance in this area from a computational and design perspective. Specific coverage will vary with each offering, and may include project work and design / case studies. Topics for each offering of the course will be separately listed.

SID890 Major Project (SIY)

40 credits (0-0-80)

SIV895 Special Module on Intelligent Information Processing

1 credit (1-0-0)

This course will focus on presenting conclave of methods which are being practiced for intelligent computing – learning techniques, classification methods, embedding intelligence, neural networks, soft computing and evolutionally methods. Emphasis will also be given on the variety of multidisciplinary applications of such techniques.

School of Biological Sciences

SBL100 Introductory Biology for Engineers

4 credits (3-0-2)

Darwinian evolution & molecular perspective; Introduction to phylogeny - Classification systems in biology and relationships; Cellular assemblies – From single cell to multi-cellular organisms: Geometry, Structure and Energetics; Comparing natural vs. human-made machines; Infection, disease and evolution – synergy and antagonism; Immunology – An example of permutations and combinations in biology; Cancer biology – Control and regulation; Stem cells – Degeneracy in biological systems; Engineering designs inspired by biology – Micro- to Macro- scales.

Laboratory: Biosafety; Buffers in biology - Measuring microlitres, Preparation of standard biological buffers, buffering capacity and pKa of buffers, response of cells and plant tissues in different buffering conditions; Observing cell surface and intracellular contents using light and fluorescence microscopy, measuring cellular motion using real-time video microscopy; Measuring and visualizing intracellular molecular components - Proteins and Genomic DNA.

SBP200 Introduction to Practical Modern Biology

2 credits (0-0-4)

SBL201 High-Dimensional Biology

3 credits (3-0-0)

SBD301 Mini Project

3 credits (0-0-6)

SBL701 Biometry

3 credits (3-0-0)

Pre-requisites: EC 90

Probability and Set theory: Application to biological data, Random variables: Individuals vs. populations in biological systems, Classification of data: "Discreteness or Continuity" in biological evolution, Distributions, Descriptive statistics, Inferential statistics, Analysis of variance (ANOVA), ANOVA-advanced concepts, Power analysis of variance, Regression and Correlation, Count/Frequency data. MATLAB based assignment activities will be designed for data simulation and analysis corresponding to the covered lecture material.

SBL702 Systems Biology

3 credits (3-0-0)

Pre-requisites: EC 90

Overview and history of systems biology; Basic elements of molecular biology – DNA and protein, the genetic code, transfer RNA and protein sequences and control of gene expression; Signal transduction – signaling pathways and cascades, information processing and transmission, pathway dynamics; Trees and sequences – graphs, connectivity, trees, flows in networks; Elements of process control – feedback, feed forward and cascade control, dynamics of closed loops, analogies with control of gene expression; Examples of transcription networks, determination of simple motifs that are repeated in genetics; guidelines for analyzing genetics circuits, layouts and representations, circuit dynamics; modeling, simulation and prediction of cellular events, micro-macro relations; Experimental methods in systems biology, creation of directed information, existing databases; platforms and applications; Case studies from literature – circadian clock, metabolic networks, gene circuit design; New frontiers.

SBL703 Advanced Cell Biology

3 credits (3-0-0)

Pre-requisites: EC 90

Chemistry of biological structure, function and information flow, Cellular compartmentalization and molecular organization of organelles, Properties and growth of HeLa, Jurkat, SF9 etc.; De-novo synthesis of organelles versus templated replication, Microtubule, microfilament and intermediate filaments; Transport of biomolecules; Nuclear structure, chromatin packing and transport; Microtubule, actin and filament based motile systems, cell-cell recognition and adhesion; Fluorescence, phase contrast, confocal and AFM; Molecular basis

of cancer, oncogenes and tumor suppressor genes; cell growth and differentiation.

SBL704 Human Virology

3 credits (3-0-0)

Pre-requisites: EC 90

Introduction, overview and history of medical Virology; Virus structure, classification and replication – symmetries, replication, maturation and release; Principles of viral pathogenesis- entry, cell tropism. Cellular pathogenesis, clearance and persistence; Respiratory viruses – Influenza, paramyxoviruses, adenoviruses, SARS, RSV; Viral gastroenteritis – causative agents, epidemiology; Hepatitis viruses – food borne and blood borne; Herpes viruses – infections in immunocompetent and immunocompromised individuals, latency; Enteroviruses – Polio, ECHO, coxsackie viruses; Congenital viral infections – effects on foetus, prevention; Retroviruses – HIV, AIDS; Arboviruses and Viral zoonoses – arthropod vectors, vertebrate hosts, transmission cycles, rabies and viral haemorrhagic fevers; Tumour viruses – oncogenic mechanisms of viruses; Strategies for control of viral infection – active and passive immunoprophylaxis, antiviral agents; Safety precautions – lab acquired infections, hazard groups and containment levels; Case studies from literature, evolving and emerging areas of interest.

SBL705 Biology of Proteins

3 credits (3-0-0)

Pre-requisites: EC 90

Over-view of protein preparation, modification, maturation; protein-protein interactions in cells, Heat shock proteins and their structure and functions in cells, protein mimicry, assisted protein maturation processes in cells, Protein trafficking and dislocation, protein secretion from cell, kinetics and thermodynamics of protein folding and unfolding reactions, biomarker discovery, ribosome profiling.

SBL706 Biologics

3 credits (3-0-0)

Pre-requisites: EC 90 and BEL 110 or CYL 110 or CYL 120 or Equivalent

Definition and classification of biologics, Biologics, Biopharmaceuticals Vs. conventional drugs, Biosimilars, Role of rDNA technologies, transgenics (animal and plant), oligonucleotides, peptide, PNAs mediated therapeutics, drug delivery systems (lipids, cell penetrating peptides), vaccine, monoclonal antibodies produced by and in the living organisms, nanobiopharmaceuticals, overview of the technologies employed for identification, characterization and production of biologics, Bioprospecting for novel drug discovery and development, Gene prospecting, plant bioprospecting, marine bioprospecting Phytomedicines, plant secondary metabolites, herbal drugs, edible vaccines, Bioresource based alternative medicine systems - AYUSH, Southeast Asian medicine system, PIC, MAT and ABS, assessing the role of biomimetics, system biology, synthetic biology in biologic production, GMPs, legislations, Safety Regulations associated with biologics in biopharmaceuticals.

SBL707 Bacterial Pathogenesis

3 credits (3-0-0)

Pre-requisites: EC 90 and BEL110 or CYL110 or CYL120 or Equivalent

Common features of bacterial pathogens, structural features, capsules and cell walls, Pathogenicity islands, types of toxins produced, effect of toxins on host cells, secretion systems, production and function of adhesions, attachment to host cells, mechanisms of cellular invasion, extracellular and intracellular invasion, intracellular survival and multiplication, virulence factors, mechanisms of antibiotic resistance, interaction with the host immune system- innate and adaptive, evasion strategies, Immunocompromised individuals and opportunistic pathogens, specific examples such as Listeria, Mycobacterium, Shigella, Yersinia etc., strategies for prevention and cure, drug designing and scope for future studies, emerging infectious bacterial pathogens.

SBL708 Epigenetics in Human Health and Disease

3 credits (3-0-0)

Pre-requisites: EC 90 and BEL 110 or CYL 110 or CYL 120 or Equivalent

Introduction – overview of epigenetics in human health and disease; Epigenetic mechanisms – basic mechanisms: DNA methylation and genome imprinting –role of DNA methylation; Epigenetics in cancer Biology – global and region specific changes and effects on transcription; DNA methylation and repeat instability diseases; Epigenetic reprogramming and role of DNA methylation in mammalian development –role in embryogenesis; Epigenetics in pluripotency and differentiation of embryonic stem cells; MicroRNA in carcinogenesis – mechanisms and potential therapeutic options; Epigenetic regulation of viruses by the host –role in pathogenesis; methods in epigenetics-methylation patterns and histone modifications; Case studies from literature, evolving and emerging areas of interest.

SBL709 Marine Bioprospecting

3 credits (3-0-0)

Pre-requisites: EC90 and BEL110 or CYL110 or CYL120 or Equivalent

Significance, Overview of Marine Bioresources, Marine Biomedical Research and Development; Drug discovery continuum in Marine Biotechnology, Omics, Biosensors, Biomaterials, Bionanotechnology, Bioactive compounds, Nutraceuticals, Pharmaceuticals, Cosmeceuticals, Novel Technologies in Marine Research, Sustainable development, Case studies, Emerging issues and challenges; IPRs, Marine Biodiversity and Traditional Knowledge (medicine).

SBL710 Chemical Biology

3 credits (3-0-0)

Pre-requisites: EC90 and BEL110 or CYL110 or CYL120 or Equivalent

Chemical modifications of proteins, protein and nucleic acid immobilization; The Organic Chemistry of Biological Pathways; cross linking in biomolecules; Physical Chemistry of proteins; fluorescent labeling of proteins and nucleic acids, sequencing of proteins and amino acids, radio labeling of proteins and nucleic acids, chemistry of glycosylation, phosphorylation, sulphonylation, methylation, of proteins and nucleic acids, non-ribosomal peptide synthesis, nano particles mediated monitoring of protein conformational transition, folding and unfolding processes; surface properties of proteins and subsequent implications in cellular processes, solubility of proteins, physical basis for biomolecular structure formation, environmental effects on structure-function of biomolecules, chemistry of enzymatic digestion of nucleotides and proteins, role of metal ions in the cellular function, metallo-enzymes and their biosynthesis, Hydrogen/Deuterium exchange reaction and its application in monitoring biological processes, basic concept of chemical synthesis of life.

SBL712 Dynamics of Infection Biology

3 credits (3-0-0)

Pre-requisites: EC90

Features of bacterial/viral/other pathogens, molecular evolution and dissemination, factors influencing dissemination, host entry, receptors and pathways, host genetics, persistence and latency, co-infection dynamics, host-pathogen interactions, innate and adaptive immunity, Th1-Th2 balance, intracellular survival and dissemination, molecular mimicry, apoptosis and necrosis, intervention strategies and application of bioinformatics in infection biology.

SBV750 Bioinspiration and Biomimetics

1 credit (1-0-0)

Pre-requisites: EC 90

Introduction to Bioinspiration and biomimetics, Bioinspiration pools marine and terrestrial plants and animals, Biomimetic/Bioenabled materials, biomineralisation, Biomimetic adhesives and attachment devices in nature, prosthetics function and design, bioinspired robotics, biomimetic pattern formation, colour and camouflage, photocells, role in agriculture and human health, future prospects in the industry.

SBC795 Graduate Student Research Seminar-I

0.5 credit (0-0-1)

Pre-requisites: EC 90

The course is aimed at giving the student a forum to periodically present their research, to critique the research of colleagues and learn about the best research in their fields. Discussions will be held on scientific methodology and inculcated with a value system for pursuing a career in science. Activities will be carried out in workshop mode.

SBC796 Graduate Student Research Seminar-II

0.5 Credits (0-0-1)

Pre-requisites: EC 90

Special topics in research will be assigned by Coordinator; results of the research of each student registered for the course will be discussed; Discussions on scientific material from recently published papers in areas related to their research; The "Laboratory" activities will include delivery of seminars on their research and participation in the seminars and critique.

SBS800 Independent Study

3 credits (0-3-0)

Pre-requisites: EC 120

The course is aimed at providing the student an opportunity to pursue a special research topic. A research topic assigned and mutually agreed upon by the faculty and student. Registration will require the submission of a proposal through the research committee on the topic clearly delineating the objectives to be achieved.

SBL801 Signal Transduction and Drug Target Identification

3 credits (3-0-0)

Pre-requisites: EC120

Eukaryotic cellular communications, importance of signal transduction, principles of signaling, recurring themes of signal transduction, reception, transduction, response, signal amplification, coordination of signaling, cascade formation, structure to function, anchors, adaptors, scaffold, recruitment of signaling proteins, topology and functional domains, dual specificity, modules, convergence, divergence, cross talk, receptors, G-protein coupled signal transduction, growth factors and tyrosine kinases, mitogen activated protein kinases, insulin signal transduction, critical nodes, protein phosphorylation, drug target identification, mechanism of drug action against signal transduction, antagonists of cell surface receptors and nuclear and receptors, ion channel blockers, transport inhibitors, targeting protein kinases and phosphatases, inhibitors of kinases and phosphatases, pseudosubstrates, examples of clinical drugs against protein kinases/phosphatases, new and emerging technologies to identify drug target like antisense, omics, RNAi, high content screening, target hopping, combination of mutations, systems approach, complexity in signaling, techniques in signal transduction.

SBL802 Macromolecular Structure and Data Processing

3 credits (3-0-0)

Pre-requisites: EC120

Treatment of macromolecules to generate suitable crystals, hanging drop and sitting drop techniques, seeding, cryoprotecting and freezing crystals, acquisition of diffraction data, synchrotron radiation, indexing and scaling data, space group identification, symmetry elements, Fourier transformation and structure factors, the phase problem, heavy atom methods, molecular replacement, anomalous X-ray scattering, calculation of electron density, model building and phase refinement, co-crystallography, small angle X-ray scattering, preparing samples for transmission electron microscopy, negative staining, cryo-techniques for freezing grids, manual vs. automated data collection, cryotomography, software packages for data collection and processing, generating a model, refinement and validation, time resolved cryoEM.

SBV881 Advances in Chemical Biology

1 credit (1-0-0)

Pre-requisites: EC 120

Structural aspects of proteins and nucleic acids, Mechanism of action of biological molecules, Chemical approaches to solve biological problems, Designing chemical tools for addressing problems in biology, Bioconjugate chemistry, Recent developments in these areas.

SBV882 Biological Membranes

1 credit (1-0-0)

Pre-requisites: EC 120

Introduction to the hydrophobic effect, Phospholipid model systems, Cellular membrane asymmetry, Membrane dynamics, Membrane trafficking, Membrane fusion, Membrane proteins (Form and function), Small molecule permeability, Pores channels and transporters, Lipid systems for drug delivery.

SBV883 Chaperone and Protein Conformational Disorders

1 credit (1-0-0)

Pre-requisites: EC 120

Molecular mechanism of protein misfolding, fate of aggregated proteins in the cell, various protein misfolding disorders in humans, mechanism of action of molecular chaperones in various cells, chaperone assisted suppression of protein misfolding.

SBV884 Elements of Neuroscience

1 credit (1-0-0)

Pre-requisites: EC 120

Introduction to cell biology of neurons; presynaptic and post synaptic mechanisms; signal transduction cascades; neural integration; Hodgkin-Huxley experiments; Na and K pumps; physiological significance of pump modulation; Na and K channels; type and function of different Ca activated K channels; structure function and inactivation; tools for studying Ca signalling; caging and releasing Ca in the neurons; role of nitric oxide; Long term potentiation.

SBV885 Protein Aggregations and Diseases

1 credit (1-0-0)

Pre-requisites: EC 120

Introduction to protein aggregation (amorphous and amyloid), types of aggregates, difference between aggregation and precipitation; External and internal factors for protein aggregation, pH, temperature and protein concentration effects; hydrophobicity, discordant helices; Structural and conformational prerequisites of amyloidogenesis, predominance of beta-sheet, alpha-helices or random coils of native protein; generic nature of protein folding and misfolding, Cytotoxic intermediates in the fibrillation pathway, Oxidative stress and protein deposition disease, Protein aggregation, ion channel formation, and membrane damage, Recent trends in prevention of amyloidosis; drugs, antibodies, combination therapy.

SBV886 Signaling Pathway Analysis

1 credit (1-0-0)

Pre-requisites: EC 120

Introduction to modelling of biological systems – history, types of models, macroscopic phenomena, modelling of cellular systems; hierarchy in information transmission and utilization, interaction between different levels of information leading complex behaviour; robustness of cellular systems and its significance; molecules that transmit signals, role of signaling in regulation of cellular functions, gene regulation; signal transduction – evolution and history; first messengers and receptors, GTP-binding proteins; Calcium Signaling – free, bound and trapped calcium, mechanisms regulating calcium concentration, calcium changes in single cells; protein phosphorylation

as a switch, protein kinase A, protein kinase C, structure of signaling pathways, extracting motifs from pathways, relating motifs to observations; dynamics and periodicity in signaling pathways.

SBV887 Current Topics in Computational Biology

1 credit (1-0-0)

Pre-requisites: EC 120

Bring about awareness of the challenges in Genomics, Proteomics, Metabolomics and Structural Biology.

SBV888 Current Trends in Computer Aided Drug Discovery

1 credit (1-0-0)

Pre-requisites: EC 120

Teach students various methods for target identification, and applications QSAR and molecular modelling in drug discovery.

SBV889 Diagnostic Virology

1 credit (1-0-0)

Pre-requisites: EC 120

Introduction to diagnostic virology – direct and indirect methods, specimens and window period; Microscopy – light microscopy, electron microscopy, and fluorescence microscopy in virus identifications; Methods of virus isolation – cell culture, embryonated egg inoculation and animal inoculation; Viral antigen detection – methods, assay characteristics, rapid antigen identification techniques; Detection of viral antibodies – methods, role of quantitative measurements, class-specific immunoglobulin detection; Viral nucleic acids – amplification, detection and quantitation methods; Molecular epidemiology of viral infections – high throughput methods; Identifying antiviral resistance – genotypic and phenotypic approaches; Quality control in diagnostic virology – internal and external quality control, international standards, and Shewhart control charts.

SBV890 Kinetoplastid Parasites and Novel Targets

1 credit(1-0-0)

Pre-requisites: EC 120

Kinetoplastid diseases, transmission, clinical features, immune evasion, treatment, antimicrobial chemotherapy, drug resistance, cross – resistance, Leishmania, promastigotes and amastigotes, procyclic and metacyclic, macrophage, interaction with sand fly, cytokine response, transmission, syndromes associated with leishmaniasis, microtubules in kinetoplastida, dynamics and posttranslational modifications, drug interactions, resistance against tubulin binding agents, arsenite resistance in Leishmania, transporters in kinetoplastid protozoa and drug targets, leishmanial glucose transporters, function of histone deacetylases in kinetoplastid protozoa, DNA – topoisomerases in Leishmania, a possible therapeutic target, exoproteome of leishmania, importance and its application in Leishmania.

SBV891 – Virus Host Interactions

1 credit (1-0-0)

Pre-requisites: EC 120

Introduction to the virus life cycle; host cell surface molecules utilized as virus receptors, mechanism of cellular membrane penetration for enveloped and non-enveloped animal viruses, cellular entry of bacteriophages and plant viruses; icosahedral and helical capsids, disassembly and transport of genome to the replication site, process of replication, modification of cellular organelles and hijacking of host cell resources ; site and manner of progeny virus assembly ; lytic and lysogenic viruses; virus egress and involvement of the host secretory pathway; host defence mechanisms, virus strategies to evade host immune system, antiviral therapies and drug discovery.

Interdisciplinary M.Tech. Programmes

M.Tech. Programme in Optoelectronics and Optical Communications

JOP791 Laboratory-I (Fiber Optics and Opt. Comm. Lab)
3 credits (0-0-6)

JOP792 Laboratory-II (Fiber Optics and Opt. Comm. Lab)
3 credits (0-0-6)

JOL793 Selected Topics-I
3 credits (3-0-0)

JOL794 Selected Topics-II
3 credits (3-0-0)

JOS795 Independent Study
3 credits (0-3-0)

JOV796 Selected Topics in Photonics
1 credit (1-0-0)

JOD801 Major Project Part-I
6 credits (0-0-12)

JOD802 Major Project Part-II
12 credits (0-0-24)

Abbreviations

B.Tech.	Bachelor of Technology
BPGS&R	Board of Postgraduate Studies and Research
CGPA	Cumulative Grade Point Average
CRC	Centre Research Committee
DGPA	Degree Grade Point Average
D.I.I.T.	Diploma of I.I.T. Delhi
DRC	Department Research Committee
EC	Earned Credits
IRD	Industrial Research and Development
M.B.A.	Master of Business Administration
M.Sc.	Master of Science
M.S.(R)	Master of Science (Research)
M.Tech.	Master of Technology
PGS&R	Postgraduate Studies and Research
Ph.D.	Doctor of Philosophy
SGPA	Semester Grade Point Average
SRC	Standing Review Committee (for undergraduate programmes); <i>also</i> Student Research Committee (for M.S.(R) and Ph.D. student)
UGS	Undergraduate Studies
